This amendment is to answer the following:

Q6) Regarding the paving structure, addendum 2 tells us to refer to C01. C01 tell us to refer to geotechnical report, or municipal standards.

A geotechnical report was not provided with the tender documents, and there is no mention of which municipal district's standard we are to follow.

Please clarify what the specific base, sub base, and asphalt thicknesses are as they are not readily available in a geotechnical report or municipal district.

A6)

No geotechnical report was provided with the tender documents, that is correct. As such, the paving structure must comply with the local municipal standards for paving/parking lots. As this project is taking place in Consort, Alberta, the municipality of Consort's standards for paving/parking lots will take precedence. Information regarding the requirements for the specific base, sub base, and asphalt thicknesses can therefore be obtained from the Town directly.

As per the Scope of Work document, all specialized work (ie. concrete work) shall be completed by a qualified worker, and all work shall be crafted in a professional matter. These statements make the assumption that the work will be completed properly, and up to industry standards for such a job. Requirement h) in the Scope of Work outlines that any additional work that is not detailed specifically within the Scope document that is required in order to complete the Scope as written, shall be the responsibility (including all costs) of the Contractor. If standards cannot be obtained directly from the Town, it would then therefore require a geotechnical report be generated to ensure a professional job, which would be the responsibility of the Contractor to obtain.
