This amendment has been raised to answer the following questions from Industry:

Q1 With regards to Compliance Matrix Item # 1 *"The system must contain all available well header information, gas composition data, basic completion information, formation tops, directional surveys and production information for all wells drilled in Alberta, British Columbia, Saskatchewan, and Manitoba. The producing formation(s) of each well must be identified. The database does not require well logs or core data."*

Is the NEB expectation that the data will be pre-populated with data (including history back to 1998) or does the above text mean that the system should be able to import this data?

A1 The data can be imported as long as uploading is consistent with the reasonable time expectations indicated elsewhere in the matrix.

Q2 With regards to Compliance Matrix Item # 4 *"The system must be able to operate on the NEB's standard information technology platforms, including Windows 10 desktops, Server 2012R2 file servers, Microsoft IIS web servers, and SQL servers SQL2016."*

Does the above requirement, require the solution be on premise or can the solution be hosted?

A2 Yes, it can be hosted.

Q3 My understanding of the RFP is that the NEB is looking for a database that is pre-loaded with all well production data (as identified in the RFP). Is the proponent expected to have identified all the sources of data that you would like to use on their own?

If not, would it be possible for you to provide a sample dataset or data source so that I can verify that our technology will meet all the requirements of this project? I've tried going to Provincial sites and looking up the data, but I'm unsure of precisely what I should be acquiring.

A3 No, the [proponent] is not expected to identify the sources of data on their own. See attached example Excel spreadsheet.
