Signature	Date

This solicitation amendment is required to incorporate the questions and answers relating to the Request for Proposal.

1. This RFP Amendment 002 is raised to incorporate the questions and answers relating to the Request for Proposal.

The following questions and answers relating to the Request for Proposal are hereby incorporated into this solicitation amendment:

Item	English
Q1	Regarding the Technical Evaluation Matrix at SOW para 2.2, would laser hazard testing referenced to the IEC 60825-1, edition 2.0 (2007-03) standard be acceptable?
A1	The standard used by Canada for laser calculations is the ANSI standard. If a product has been tested to any other standard, it will be the Bidder's responsibility to demonstrate, to Canada's satisfaction, that the alternate standard is equivalent to the ANSI standard. Alternately, a Bidder could re-do any calculations needed to satisfy the requirements of SOW para 2.2 in accordance with the ANSI standard.
Q2	Regarding the Technical Evaluation Matrix at Spec 6.4.10, what is the Bluetooth specification required? Would a product offering Bluetooth 2.0 and Bluetooth 4.0 (Low Energy) be acceptable?
A2	There is no specific Bluetooth specification required. Yes, a product offering Bluetooth 2.0 and Bluetooth 4.0 (Low Energy) would be acceptable.
Q3	Regarding the Technical Evaluation matrix at Spec para 8.1.5, should the immersion requirement be 30 minutes instead of 3 minutes? MIL-STD-810G Method 512.5 states that a 30 minute immersion period is considered adequate to develop leakage if it is to occur.
A3	This requirement is based on the possibility of an accidental drop of the range finder into a puddle or stream and a reasonably quick retrieval. Obviously if a range finder has been tested in accordance with MIL-STD-810G for 30 minutes, this would easily meet the requirements of this paragraph.
Q4	The Canadian Army operates the Target Locator Module for precision targeting tasks. Does the requested laser range finder need to have the potential to be integrated with this system so that it could be used in the future to conduct precision targeting tasks?

A4	This hand-held laser range finder is not intended to be used with the in-service Target Locator Module (TLM) and therefore does not require the potential to be integrated with the TLM.
