AMENDMENT # 1

This amendment is raised to answer the following Questions:

Q1: Are they able to set up a plant in the park and will there be aggregate supplied if they set up plant in the park.

A1: An asphalt plant may be set up at the Jasper Transfer Station by the contractor. Set up and operation of the asphalt plant must be in accordance with the PCA National Best Management Practices. Public and commercial access to the transfer station must be maintained at all times. Aggregate is not available within the park; the contractor is responsible to supply all aggregate.

Additional Conditions for Operation of an Asphalt Plant within the National Park:

- The asphalt plant must be registered with Alberta Environment and comply with the Code of Practice for Asphalt Paving Plants.
- Tanks to be installed and registered in accordance with the Storage Tank Systems for Petroleum Products and Allied Petroleum Products Regulations <http://laws-lois.justice.gc.ca/eng/regulations/sor-2008-197/index.html> (These regulations require registration before tanks can be filled.)
- Spills exceeding 5 Litres will be reported to the Environmental Surveillance Officer. Spills exceeding 100 Litres must be reported to Environment and Climate Change Canada.
- Should a spill escape secondary containment then the permit holder is responsible for completing environmental clean-up. This will include removal of contaminated materials to meet CCME residential parkland criteria, confirmatory sampling by a qualified environmental professional, site restoration appropriate for the location, and a written report documenting the incident and corrective actions.

Q2: The schedule of quantities request "Durable Pavement Roadway Lines" . In the specifications section 32.17.23 The material specified is Low VOC Paint. Please confirm if the material to be used is Traffic Paint.

A2: Acceptable products include low VOC traffic paint with glass beads as per Specification 32 17 23.

All other terms, clauses and conditions remain unchanged.
