QUESTION AND ANSWER

Q57. Ref addendum # 5, Section 35 59 14, clause 2.2.1, please note that the notion of 98% solids content, beside that it contradicts being solvent-free, does not necessarily qualify a coating to be "marine grade" and excludes many that are. Could you please offer a universal *standard* to define a "marine grade" coating?

A57. See Attachment No. 30 – Addendum No.6
