## **SOLICITATION AMENDMENT 003 IS RAISED TO ANSWER THE FOLLOWING QUESTIONS:**

### **Question 1:**

“Choice of satellite-aided inertial geolocation and LiDAR devices:

In Annex A section 4.0 the need to generate and record metadata from these classes of devices is noted, and in Table 5.2, section A.2 and A.3 the high level accuracy requirements are specified for these devices.

Q1. Is there any device preferences ( as with the Ladybug5 panoramic camera), or is the vendor free to choose the specific implementation offered?”

### **Response 1:**

“R1. The vendor is free to choose which satellite-aided inertial geolocation and LiDAR devices to integrate, as long as they are commercially available and meet the other requirements in the Statement of Work.”

---

### **Question 2 and Question 3:**

“Mounting and configuration of the CRC-provided phase array antenna modules:

In Annex A, section 5 it is noted that 4 customer-proved phased array antenna as described in Annex C, section 2.0 must be integrated. In order to accurately respond , it would be helpful to have more clarity as to the required configuration(s):

Q2. Are the antennas to be mounted in a stationary manner on the portable equipment? If not stationary, do you require rotational control or the ability to axially tilt?

Q3. In Annex 3, section 2.0 a Directional Configuration consisting of three 120 degree phase array antennas is mentioned. Does this represent three of the four supplied antennas?”

### **Responses 2 and 3:**

“R2. The phased array antennas are to be mounted in a stationary, but reconfigurable manner, so as to support the various MIMO configurations specified in the Statement of Work.”

“R3. Yes. The phased array antennas to be provided by CRC each provide 120 degrees of directional coverage, thus enabling 360 degrees of azimuthal coverage for a terminal configured to have at least three phased array antennas.”

---

**Question 4:**

“In Annex A section 4.0, it is noted the gear must be able to operate at velocities up to 50km/hr

Q4. Are there any extraordinary environmental requirements (vibration, shock, air-borne particulates) which are foreseen, or will it be mounted in vehicles equipped with isolation mounting used for mobile electronic testing apparatus?”

**Response 4:**

“R4. The offered solution does not have to meet extraordinary environmental requirements other than those that can reasonably be inferred from the Statement of Work. Vehicle installation, including shock mounting, of the equipment racks will be performed by CRC, in accordance with standard installation practices for mobile electronic test equipment.”
