Amendment 002

This amendment is raised to publish question and answer.

Question 2:

The tender does not specify if the electric vehicle requires brakes on all four (4) wheels. Our electric utility vehicles comes standard with rear wheel brakes but we can install front wheel brakes as an option. The electric vehicle we sell also has dynamic braking which is built in to the electric motor control; so when you let off on the foot pedal, the motor controller sends a signal to the electric drive motor to go into what is called regenerative braking, and this assists in stopping the vehicle. The electric vehicle we want to quote is also available in a 72 volt configuration, which provides more power and much longer intervals in having to charge the batteries.

Response 2:

The Purchase Description has been amended as follows:

2.7 Motor

The Electric Utility Vehicle must have a motor of 48 Volt AC or DC at the minimum.

2.11 Brake System

The Electric Utility Vehicle must be equipped with the manufacturer's standard braking system that includes a manually actuated parking brake. It must have a front and/or rear braking system.

All other terms and conditions remain unchanged.
