Amendment 001 is raised for the following:

Question 1: Is there a mandatory operating temperature range for the equipment? This would be due to the electrical operating characteristics (cable flexing in the cold, switch operation, ETC), and of course the hydraulic oil operating range. (Part of Annex A, section 1)

Answer 1: The specification indicates that the unit must be designed to operate in all types of weather; in Halifax, NS, all types of weather can mean temperatures ranging from -20 degrees Celsius to 30 degrees Celsius and may include rain, snow, high humidity and exposure to minor ocean spray when used on ships or jetties.

Question 2: There is no detail of an overload for the motor starter. Is a standard one fine, or is one with ground fault protection required or desired? (Part of Annex A, section 2.3)

Answer 2: Any standard motor overload that will function properly and safety in the environments that the unit may be exposed to is acceptable.

Question 3: Regarding the CSA certification requirements, is this to say the entire electrical scope of work is to be verified by one of the organizations, or that all electrical components that make up the portable HPU are to bear a certification label? (Part of Annex A, section 3)

Answer 3: The Portable HPU must be certified as a completed unit.

All other terms and conditions remain the same
