Amendment 002 to answer the following question;

Question: The points available for Additional Capacities or Features for the system account for more than 17.5% of the total Technical points being allocated. In almost all cases (as noted in Annex D) these points collectively are equal to or exceed those allocated for mandatory system requirements as well as the assessment of the "fit-for-purpose" nature of the system as illustrated in the analytical results.

As these items lie outside the scope of this solicitation and the efficacy of these options is not being evaluated, they should not form part of the point-rated assessment. Failing that, their individual worth should not exceed the lowest score noted in the Point Rated Criteria, ie. ≤ 5 .

Answer: It's imperative to have an instrument that is as versatile as possible to ensure that have the best chance of meeting future challenges. We already have literally hundreds of chemical contaminants that we measure using these instruments and industry is constantly synthesizing new chemicals every year, so it's impossible to know, a priori, what our next application will be. As a result, we are maintaining the scoring for this section.

Also note, that although R7 accounts for 17.5% of the total point technical points, the overall weighting of these features in the final combined Technical/Price evaluation is much less.
