Challenge EN578-170003/29: Logistics and Resource Management of Emergency Response Assets
Attachment 5
Questions and Answers #6 & 7

This document contains questions and answers related to this challenge.

Question #6:

Essential Outcome #5 reads "Displays critical or selected resources as standardized icons". (Afficher les ressources essentielles ou sélectionnées sous la forme d'icônes uniformisées.) This is very vague. Can a few concrete examples of resources typically be used be provided as examples? I want our mock-ups to show icons that would be relevant.

Response #6:

For each participating agency examples could include unique vehicle identifier; unique employee identifier; unique major piece of equipment identifier, etc**.**

Question #7:

Essential Outcome #6 reads "Integrate Geographic Information System (GIS) coordinates and incident-specific maps which displays data in layers". (Intégrer les coordonnées du système d'information géographique (SIG) et les cartes liées aux incidents, afficher les données sous forme de couches.) What are some example of potential layers? Again, concrete examples will make it more relevant and help to clarify what is really wanted.

Response #7:

Examples of potential layers may include roads, buildings, critical infrastructure, weather patterns, vehicle locations of responding services, incident boundaries, etc.
