Amendment 002 to Solicitation No. 6D063-183752/A is raised to address the following:

**1. Questions and Answers:**

Q1. Reference Annex A – Requirement – Item 2: Must have LED illumination for brightfield, darkfield, phase contrast (PH1, PH2 and PH3), and FITC fluorescence. Is darkfield microscopy being used? If so, what samples are being imaged? Is it acceptable if there are more than one fluorescent channels?

A1. Yes, darkfield microscopy is being used. Various bacteria (Leptospira and Borrelia) that are being visualized and enumerated. Yes, it is acceptable, but FITC is mandatory.

Q2. Reference Annex A – Requirement – Item 6: Sufficient focus stroke to allow samples to be in focus when viewed in 96 well plates. Will only 96-well plates be imaged or will other plate formats be required? Will imaging slides, hemocytometers and/or petri dishes be needed?

A2. Only 96-well plates (and possibly petri dishes) will be used with the long distance working objective. Slides and hemocytometers will be used with the standard objective.

Q3. Reference Annex A – Requirement – Item 7: Must have tilting and telescoping ergonomic observation tube. Is the end user open to considering a LCD flat screen which is significantly more ergonomically friendly than an ocular site with tilting?

A3. No. The LCD screen will be distracting while we are using the microscope in the dark (unless there is the option to turn it off). If this option exists, the LCD must be built into the microscope and not be in the form of a separate monitor due to limited bench space.

**2. Refer to the header of the Request for Proposal page 2 to 24 and amend as follows:**

**DELETE:**
