La modification 001 vise à indiquer ce qui suit :

L'invitation prend fin

Supprimer: February 28th

Remplacer par: March 5th

Question and Reponse

Q1 On Drawing S-1 of the above noted project, note 2 of "Access Notes" indicates that "Access bridges between dolphins have a maximum live load limit of 20 tonnes". Is this limit only for the vehicle loading bridge or the bridges between the dolphins of the wharf structure as well? If it is only for the vehicle loading bridge, is there a limit on the loading of the wharf structure bridges/dolphins?

R1

1. The attached drawing summarizes design loads for the rigid wharf between the dolphins at Saint John. Access bridges between dolphins were designed for an HS20-44 truck, but it's worth noting that there is a portion of deck that only has a permitted load of 4.8 kPa (100 psf). See attached.

2. Maximum permissible traffic loading on the transfer bridge assumes a NS Category 1 Tractor-Semi Trailer combination, with a total Gross Vehicle Weight of 40 tonnes distributed over 6 axles (3 truck and 3 trailer).

The contractor will be responsible for ensuring that proposed construction activities are within the safe loading limits of all affected infrastructure and that structures are not overloaded or otherwise damaged during work of the project. The Contractor will be required to submit methodology stamped by a Professional Engineer registered to practice in New Brunswick for review by the Departmental Representative prior to all work. This stamped methodology must include an assessment of the existing structure to support intended construction loading.

See attached Sheet 1.

Toutes les autres conditions demeurent inchangées.
