

#### Question #1

In reviewing the pdf drawings sent with the tender package and then a copy of this dwg file that you sent us, we've noticed several major differences in these layouts. For example on the first drawing workstations 18 -23 are shown as the only workstations that require a 3<sup>rd</sup> stack to bring the overall height up to 66"H. This corresponds to the 14 Non-SA Products listed on page 9 of the tender document. However the attached dwg file, which my CADD tech was working from, show that workstations 1 to 13 are also equipped with a 3<sup>rd</sup> stack bringing all of these panels up to 66"H. These include panels that are 24"W, 30"W and 36"W. None of these sizes however have been included as part of the Non-SA Products.

#### Answer #1

Since the 66" high panels are not on the SA. We would remove the 3<sup>rd</sup> stack-on for workstations **#1 to #13** from the bid. Those for #18 to #23 can remain on the quote.
