Amendment 007 to the Sea to Shore Connector Request for Proposal (RFP), W847S-19-0074, is being issued to:

- a) Provide questions and answers to potential bidders;

Questions from Industry

1. Regarding Annex G, Mandatory technical evaluation criteria, Table 3, item 1: *"The bidder must demonstrate that they have experience designing, manufacturing and commissioning class society approved barge systems, by providing three (3) examples of pontoon barge projects which they implemented in the last 10 years"*

Question1.1: In case, when pontoon barges were designed and built as per ABS Class regulations "Rules for building and classing steel vessels under 90m (295ft) in length, Part 2, Materials and welding" 2012 edition and/or "Rules for building and classing of steel barges (2009)" (or equivalent), but as per client decision finally barges/ vessels wasn't registered with Class society and/or Transport Canada, please confirm that will be considered as complying with the evaluation criteria;

Answer: Annex G, Table 3, Item #1 states that Bidders must demonstrate that they have experience designing, manufacturing and commissioning class society approved barge systems. Bidders must provide Canada with sufficient evidence to demonstrate how this requirement is met. The three examples of pontoon barge projects should demonstrate those characteristics.

Question1.2: In case, when Bidder demonstrate experience with single barge (20.73m x 8.55m per example) instead of pontoon barge system, please confirm that will be considered as complying with the evaluation criteria;

Answer: The SOW section 5 provides the Sea to Shore Connector requirements. Bidders must provide Canada with sufficient evidence to demonstrate how those requirements are met. The requirements don't specify single or multiple barges but leave it to Bidders to present a solution which meet the performance requirements as outlined in the SOW.

Question1.3: In case, when Bidder demonstrate experience with steel barges slightly over 10 years ago but less than 11 years, please confirm that will be considered as complying with the evaluation criteria;

Answer: The time period requirement is within the last 10 years. Bidders are to demonstrate examples of pontoon barge projects implemented in the last 10 years. Bidders may demonstrate examples beyond 10 years.

- 2.** Regarding Annex G, Mandatory technical evaluation criteria, Table 3, item 2: *“The bidder must demonstrate, by providing an example, that they have experience designing, manufacturing and commissioning barges of similar complexity of no less than 75% of the cargo load capacity required by the SOW in the last 10 years”*

Question2.1: Almost all pontoon barges are with specification of cargo load capacity in [tonne/square meter], because with pontoons can be done different arrangement with more or less pontoons and different cargo load capacity for the entire pontoon assembly. In this SOW required cargo capacity is 50 tonne with cargo area of 15 square meters, or capacity of 3.333 tonne/ square meter. In case we consider the cargo load capacity required by SOW is 3.333tonne/ square meter for comparison purpose with our experience projects, please confirm that will be considered as complying with the evaluation criteria?

Answer: The SOW section 5 provides the Sea to Shore Connector requirements. Bidders must provide Canada with sufficient evidence to demonstrate how those requirements are met. The requirements are such that Bidders are to present a solution which meet the performance requirements as outlined in the SOW.

All other terms and conditions of the RFP remain the same.
