Calibration

Question and Answer #2

- Q1.** Annex A Statement of Work, Para 6.5 states that all torque wrenches must be calibrated to ISO 17025, but Para 6.6 says that the contractor can do some themselves as long as the test equipment itself has been calibrated to the same standard. Then Para 11 again states that all Torque wrenches must go to an accredited lab.

Reference from Statement of Work:

- 6.5 **Torque Wrenches: ISO 17025:2017** - The UK MOD operates a safety case for the use of Torque Wrenches across the entirety of Defence that stipulates that all Torque Wrenches are calibrated each year. This safety case is now being changed and will require that all UK MOD Torque Wrenches are calibrated at an ISO 17025 accredited laboratory. This will ensure that standards are maintained globally for all UK MOD owned and operated Torque Wrenches.
- 6.6 **Torque Wrenches: Technical Specification** - The UK MOD holds the Technical Specifications for some of its Torque Wrenches that will allow a contractor to calibrate the Torque Wrench using the correct procedure. These Technical Specifications will be made available post contract award. Where there is no Technical Specification, the contractor is expected to source the correct specification and test in accordance to that specification.
- 11.1 All Torque Wrenches, and any test equipment used to calibrate the Torque Wrenches, must be calibrated in an ISO 17025:2017 accredited laboratory.

Please clarify if it is '*all*' or '*some*'.

If it is '*some*', in the list of Torque Wrenches at Appendix 1, please indicate to which standard each wrench must be calibrated.

A1. Calibration:

All Torque Wrenches **must** be calibrated in a ISO 17025 accredited laboratory. If the contractor uses any calibration machines within this ISO 17025 laboratory, they too must be calibrated. No Torque Wrench is to be calibrated outside of a ISO 17025 accredited laboratory.

Each Torque Wrench will have a manufacturers' technical specification that describes how that Torque Wrench is calibrated within an ISO 17025 laboratory. The UK holds some of these technical specifications and will release these on award of contract. Where no manufacturers' technical specification exists the contract must source this.
