

RETURN BIDS TO:

RETOURNER LES SOUMISSIONS À:

Travaux publics et Services gouvernementaux
Canada
Place Bonaventure, portail Sud-Oue
800, rue de La Gauchetière Ouest
7e étage, suite 7300
Montréal
Québec
H5A 1L6
FAX pour soumissions: (514) 496-3822

**SOLICITATION AMENDMENT
MODIFICATION DE L'INVITATION**

The referenced document is hereby revised; unless otherwise indicated, all other terms and conditions of the Solicitation remain the same.

Ce document est par la présente révisé; sauf indication contraire, les modalités de l'invitation demeurent les mêmes.

AMENDMENT 003

This amendment is to provide a question/answer, amend the Request for Proposal (Annexes A & C) and postpone the tender closing date.

1- Duration of the bids period

on – le 2019-07-15

2- QUESTION AND ANSWER

Q1. Criterion 2.7. Are dedicated background plates corresponding to different particle sizes necessary?

A1. No. Under the proposed system, special plates are not required as long as the device can support the required sizes.

Q2. Criterion 2.8. Can the 0.2 kg and 2.5 kg drying lot criteria be different?

A2. The drying interval may be different from that indicated provided that the minimum of 0.2kg and the maximum of 2.5 kg is met.

Q3. Criterion 2.8. Does the 2.5 kg also apply to the coating?

A3. Nothing was indicated at the coating level because of the huge variation between the types of processes and the type of product used.

Q4. Criterion 2.16, As per NEC/CEC, this means the equipment shall be rated for a Hazardous location Class II, Div. 2, Group G. Temp Code T3B, max temp 165 C. Please confirm that this is the case.

A4. Yes, The system must be capable of treating ST2 Class Powders.

3- AMEND THE REQUEST FOR PROPOSAL AS FOLLOWS.

DELETE ENTIRELY

Annex A – Item 2.5

Main power supply. The system must be compatible with one of the following electrical systems: 60 Hz (Hz) and 120 volt (V) single-phase, 208 volt (V) single-phase, 208V three-phase, single-phase 347V or 600V three-phase.

Annex A - Item 2.18

The equipment must be equipped with a control system and display the atomization air pressure, the air temperature of the entry process, the output temperature, the temperature of the product. The device must have a data acquisition system. (A single interchangeable sensor for product temperature and output temperature is also accepted).

The control system must be able to control with the help of a programmable logic controller. The operator must be able to initiate the activation process settings via the operator's interface panel

INSERT

Annex A - Item 2.5

Main power supply. The system must be compatible with one of the following electrical systems: 60 Hz (Hz) and 120 volt (V) single-phase, 230 volt (V) single-phase, 208V three-phase, single phase 347V or 600V three-phase.

Annex A – Item 2.18

The equipment must be equipped with a control system and display fluidization and atomization air pressure, inlet process air temperature, output temperature, product temperature. The device must have a data acquisition system to monitor product temperature OR exhaust air temperature (the probe can be used in either section but not at both of them at the same time)

ANNEX "C" MANDATORY TECHNICAL CRITERIA TO BE DEMONSTRATED

Criteria no.	Criteria description	Reference within your Technical bid (Page and/or Section)
2.1	All components that come into direct contact with the product must be made of ANSI 316L stainless steel and the other stainless steel components must be 304.	
2.2	Exterior finish must be rustproof or painted steel.	
2.3	The system and its components must be water resistant and must be accessible for cleaning operations.	
2.4	The unit or all its components (before assembly) must be able to pass through a door with the following dimensions at the time of delivery: 7 feet wide (7 ') and 10 feet high (10').	
2.5	Main power supply. The system must be compatible with one of the following electrical systems: 60 Hz (Hz) and 120 volt (V) single-phase, 208 volt (V) single-phase, 208V three-phase, single-phase 347V or 600V three-phase.	
2.6	The fluidized bed system must allow the following drying techniques: granulation, agglomeration and coating.	
2.7	The system should allow coating by the Wurster technique. The Wurster system must be able to process with different particle size: 100-250 µm, 250-750 µm, 750-3000 µm.	
2.8	The system should allow drying in batch mode between 0.2 kilograms (kg) and 2.5 kg. (maximum spray capacity between 200ml and 2500ml and the lower spray capacity between 200 and 2500ml). These quantities may vary depending on the density of the product and the parameters of the process.	
2.9	The system must have a minimum spray rate of 2 liters per hour (L / h).	
2.10	The system must be provided with a pump system to feed the fluidized bed atomization nozzle.	
2.11	The system must allow heating of the intake air (minimum 20° C) to at least 80 ° C using an electric heating system.	

2.12	The system must be provided with binary atomization nozzles with connections for compressed air and liquid.	
2.13	The system must allow spraying either from the top or the bottom of the drying chamber.	
2.14	The system must have a compressed air intake regulator. The system must allow air compression of at least 6 bars.	
2.15	The system must be equipped with an input filter with the following specifications: HEPA process input filter, 99.97% min efficiency - 0.3 micron, boron silicate microfiber or H13 filters (according to EN1822-1) standard for inlet air and air atomization. Similar quality input filters is also accepted. The system must be equipped with an E10 or higher grade for outlet air filter.	
2.16	The system must be capable of treating ST2 class powders.	
2.17	The unit must be a system without static electricity build-up.	
2.18	<p>The equipment must be equipped with a control system and display the atomization air pressure, the air temperature of the entry process, the output temperature, the temperature of the product. The device must have a data acquisition system. (A single interchangeable sensor for product temperature and output temperature is also accepted).</p> <p>The control system must be able to control with the help of a programmable logic controller. The operator must be able to initiate the activation process settings via the operator's interface panel</p>	
2.19	The control system must allow USB connection to allow free extraction of data.
