# STATEMENT of WORK – Non-Anchored Solar PV Panel Assessment and Installation

Permanent Mission of Canada to the World Trade Organization

---

## 1.0 OBJECTIVE

As part of Canada's initiative to reduce its environmental footprint at its foreign properties abroad, the contractor will design, procure, deliver, install, and commission a non-anchored rooftop utility-interactive solar photovoltaic (PV) system at the Permanent Mission of Canada to the World Trade Organization in Geneva, Switzerland located at 5, avenue de l'Ariana in Geneva, Switzerland.

## 2.0 BACKGROUND INFORMATION

The intent of the solar PV panels will be to reduce the mission's dependence on electricity received from the local grid and to demonstrate support for renewable energy. The PV panels are also required for certification under the Canada Green Building Council (CaGBC)'s new Zero Carbon Building standard; of which GAC is the first organization to pilot this standard outside of Canada. A completed Zero Carbon Building Assessment from the spring of 2018 has found that the building uses 172 kWh/m<sup>2</sup> per year and needs to reduce its energy usage by 144 mWh to achieve carbon neutrality.

## 3.0 SITE INFORMATION

The building, constructed in 1998 has its original flat, asphalt rolled, and bitumen-based membrane and is composed of two roofs: a larger section at 890 m<sup>2</sup> and a smaller section at 230 m<sup>2</sup>. Both roofs are available for PV panel installations. Building drawings engineering documents from the original construction will be available to the successful proponent and an initial engineering review conducted by GAC indicates that the roof structure can support PV Panels.

A review of technical documents by GAC determined that the current roof was designed as a floor (for future extension) and has a minimum live load capacity of 2.0 kPa.

# STATEMENT of WORK – Non-Anchored Solar PV Panel Assessment and Installation

## 5.11 Options Analysis for Battery Energy Storage

The contractor will provide an options analysis of battery energy storage options that can store any excess energy produced by the solar PV system for later use. The feasibility study should consist of an options analysis of product models available for installation in Geneva, capacity (kWh), lifespan, warranty, price (CHF), depth of discharge, efficiency round-up, scalability, and temperature range in which the battery can function (noting the climate in Geneva). Any suggested storage solutions should be compatible with the solar PV system being installed. The contractor should note if there are no reasonable options in the Genevan/Swiss context.

This options analysis is only to be a summary of potential technologies, costs, feasibility, and benefits. It is not a promise of future work, nor will any battery energy storage installation be included in this project.

## 5.12 Quality Control Plan (QCP)

- The contractor shall perform inspections and tests throughout the installation process including: existing conditions/needs assessments, construction installation placement/qualification measurements, and final inspections/tests performance certification. ## 9.0 CONSTRUCTION PHASE ACTIVITIES

### 9.1 Submissions to GAC

- The contractor shall submit shop drawings and product data / submittals, catalog cuts, etc., for all systems, equipment, and materials, as stipulated herein. The contractor shall combine all product data submission material into hard copy manuals for reference during all phases of construction. Shop drawings shall be bound with product data.
- Reviews of shop drawings and product data by the mission are not to be interpreted as an approval of the contractor's product selections. The contractor shall remain completely responsible for constructing the PV system in accordance with all contract performance requirements.

### 9.2 Requirements for procurement and installation

- The contractor shall coordinate with SIG to ensure that the project satisfies all criteria for interconnection of the project to the SIG electric distribution system prior to commencing installation. This includes coordinating all negotiations,

meeting with SIG, design reviews, and participating in any needed interaction between SIG and the mission. If utility or canton approval is necessary, that will also be coordinated by the contractor.

- The contractor is responsible for preparing required submissions for obtaining the agreement from the utility. The mission, not the contractor, will sign any applicable agreements.
- The contractor shall manage interconnection and start-up of project in coordination with the mission and SIG, as applicable.
- The contractor is responsible for procuring all necessary equipment for installation (e.g., scaffolding, safety equipment, etc.). Installation will proceed as soon as possible following approval of the design proposal by GAC. The contractor may propose dates based on weather conditions and availability of the necessary products, with at least one (calendar) week's notice to GAC. All workers will be escorted by mission security staff at all times.
- The contractor and any subcontractors will be responsible for the health and safety of all workers involved, and will ensure that any required training has been done.
- Installation will be scheduled to minimize disturbance to mission operations.

## 10.0 POST CONSTRUCTION ACTIVITIES

### 10.1 Inspections, Commissioning, and Testing

- The contractor must conduct the inspections detailed in the Quality Control Plan (QCP) during and/or following installation. Inspections/tests required in the QCP shall result in a written record of data/observations. Test results shall typically include: item/system tested, location, date of test, test parameters/measured data, state of construction completion, operating mode, contractor inspector/GAC witness, test equipment description and measurement technique. The contractor shall supply GAC with detailed documentation of any malfunction or errors during the inspections, and all corrective actions taken.
- A final inspection by a licensed electrical inspector is mandatory after construction is complete and will be coordinated by GAC. Unless otherwise identified, manufacturer recommendations shall be followed for all inspection and test procedures. The inspection shall be conducted by an independent third party electrical inspector familiar with PV systems.

### 10.2 Submissions to GAC

- A complete, inspected, and functional solar PV system, installed as per the GAC-approved design proposal, manufacturer requirements, and the local building code.
- Software for monitoring the system.
- Final as-built drawings and specifications: The contractor shall submit six (6) hard copies and two (2) USBs containing the "as-built" drawings and specifications as CAD and PDF files.
- Records of inspection.
- Warranties and guarantees, final certifications, and similar documents (registered under the Permanent Mission). All warranties shall be signed by a principal of the contractor's firm and sealed.

## STATEMENT of WORK – Non-Anchored Solar PV Panel Assessment and Installation

Permanent Mission of Canada to the World Trade Organization

---

- Operations and maintenance manual, including diagram of system components, description of normal operation; description of operational indicators and normal status of each, table of modes of operation, safety considerations, preventative maintenance requirements, troubleshooting and corrective actions; sources of spare parts and cut-sheets for all components. This should include instructions for dismantling/removal to allow for roof repair and maintenance, if and when required. (A roof membrane replacement is anticipated in the coming years.) Provide a Rough Order of Magnitude Estimate (ROM estimate) for the decommissioning (removal) and commissioning (re-installation) of the array. An ROM is an estimation of a project's level of effort and cost to complete.
- Demonstration and training for designated personnel in the operation of the entire photovoltaic energy system, including operation and maintenance of inverter(s), transfer switches, panel board, disconnects and other features as requested. Instructions should include removal and installation of panels, including wiring and all connections, and shut-down and start-up activities for all components of the system. The mission shall be permitted to record this training for official use.

### 11.0 PAYMENT SCHEDULE – MILESTONES

**Payment 1:** 40% of contract amount upon receipt of 100% Design Documentation.

**Payment 2:** 60% of contract amount upon completion of installation, testing, and commissioning.

### 12.0 DOCUMENTS PROVIDED by GAC

The contractor shall inform GAC of the documentation required for project work. GAC will aim to accommodate all requests.
