TITLE: COMPLETE MECHANICAL TEST SYSTEMS

AMENDMENT 001

To answer questions from the industry.

Enquiries - Bid Solicitation - Clause # 2.3

To ensure consistency and quality of information provided to bidders, significant enquiries received and the replies to such enquiries will be provided simultaneously to bidders to which the bid solicitation has been sent, without revealing the sources of the enquiries.

Here are the questions which we have received until now:

QUESTION-1

In our Software, all functions and features are accessible and programmable through the standard user interface and method creation fields.
The only external program interaction is part of the Exporting feature of our software when the sample is completed.
Please confirm if this is acceptable.

ANSWER-1

Here, programming a sub-routine means for example to add in text mode a mathematical equation to the method with available variables, save this new element and use it with other available elements when executing the method. This can be done in the regular user software interface or in a secondary window and this is correct as long that it is programmed and saved in the same software that comes with and controls the testing machine. Then, if for you the expression programming means to define for example a new function or equation in text mode to afterwards use it in the method, the answer is yes it is acceptable.
