Amendment 004

This amendment is raised to publish questions and answers as follows:

Question 7:

Our supplier is asking if the coating spec offered the only coating that is accepted? We use an epoxy based barrier coating on our keels and other ballast bricks, interprotect 2000E. Would that be accepted?

Response 7:

Yes, the coating specification requested is the only coating that is accepted as per Item 3 of Amendment 003: LEAD BARS SHALL BE TOTALLY ENCAPSULATED WITH; SPC-SP-1386.

Question 8:

Can we drill a hole of 3/8" x 3" at one end of the lead bar so we can hold it to apply the coating? We would fill it with the required coating at the end of the coating process. We can drill a smaller hole of 3/8" diameter x 1.25" length, so it won't affect the weight of the bar and still be within your weight tolerance.

Response 8:

Drilling the proposed hole is acceptable provided:

1. Specified dimensional tolerance of the Lead Ballast Bars are adhered to;
2. Specified weight to tolerances of the Lead Ballast Bars are adhered to;
3. Surface within the hole is coated with the same coating as the rest of the bar. Lead bars shall be totally encapsulated with SPC-SP-1386, as per Item 3 of Amendment 003;
4. Filler material (if any) is approved by DND prior to fabrication. Lead bars shall be totally encapsulated with SPC-SP-1386, as per Item 3 of Amendment 003.

All other terms and conditions remain unchanged.
