This Amendment to the Solicitation is raised to address the following bidder inquiries:

QUESTION 3:

Would the client accept an 30Amps instead of 13.8Amps for draw for all components?

If not what could be the maximum?

ANSWER 3:

The 13.8 amps requirement is a function of needing to run it on a 120VAC circuit. To go to 30amps would mean that we would have to have 240VAC plugins available throughout the warehouse for its use. Therefore, No, 30 AMPS is not acceptable.

The intent is that the item will be driven by a 1HP motor optimally. For context, a 1-1/2" HP is the upper limit that can be driven by a 13.8 amp circuit at 120VAC.

There is no change to the minimum mandatory performance specifications as set out in Annex "A" at this point.

QUESTION 4:

Item M7 asks for a maximum of 13.8 amp at 120VAC. However, In item M5 a minimum 1 Hp motor is required.

The 1HP motor at 120V-1 phase draws 13.2 amps alone. In order to keep the amp draw at 13.8, you would need to eliminate all electrical options and this would be in contradiction with other requirements. A machine with all required options is closer to approximately 28-29 amps.

I would like to kindly ask you to remove item M7 or relax this requirement to 30 amp as "Electrical draw for all components of the machine combined cannot exceed 30 Amps at 120VAC."

ANSWER 4:

Manual options for "other requirements" would allow for compliance with the 1 hp and the 13.8 amp maximum draw. So, 30 Amps is not an acceptable option for the application and usage areas.

ALL OTHER TERMS AND CONDITIONS REMAIN UNCHANGED.
