

PART 1 - GENERAL

- 1.1 Related Sections .1 Section 02 41 13 Site Work, Preparation and Removal.
- .2 Section 05 50 00 Metal Fabrications.
- .3 Section 34 71 13.25 W Beam Guide Rail.
- 1.2 Description .1 This section specifies the requirements for the supply and installation of all dimensioned timber and their fasteners.
- 1.3 Measurement Procedures .1 No measurement will be made under this section. Include costs in items of wood in work for which wood is required.
- 1.4 References .1 American Society for Testing and Materials International (ASTM)
- .1 ASTM A307-12, Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
- .2 ASTM A123/A123M-12, Standard Specification for Zinc, (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
- .2 American Wood-Protection Association (AWPA)
- .1 Book of Standards (2011).
- .2 AWPA M2-11, Standard for Inspection of Treated Wood Products.
- .3 Canadian Standards Association (CSA)
- .1 CSA-0141-05 (R2009), Softwood Lumber.
- .2 CSA 080 SERIES-08 (2012), Wood Preservation.
- .4 National Lumber Grading Authority (NLGA)
- .1 NLGA-2003 Standard Grading Rules

for Canadian Lumber 2010.

- 1.5 Quality Assurance .1 Lumber identification: by grade stamp of an agency certified by Canadian Lumber Standards Accreditation Board.
- .2 Submit material specification from supplier for all machine bolts, nuts and washers for review by Departmental Representative prior to installation. Include washer dimensions.
- 1.6 Source .1 The Contractor shall submit, for approval to the Departmental Representative, the location of the Wood Preservation Plant at which the dimension timber is to be treated. This submission shall be within seven, (7), days of award of contract.
- Quality Control
- .2 The Contractor shall facilitate the inspection of the process by the Departmental Representative and, notwithstanding the Contractor's notice of treatment and whether or not the process is inspected by a representative of the Departmental Representative at the time and place of treatment, the Departmental Representative reserves the right to reject, at the point of delivery, any or all timber that does not meet the requirements of the specification.
- .3 Ordering of material is to follow the requirements of the contract such that field cutting of treated materials is essentially avoided and is used as a last resort and only if authorized by the Departmental Representative.
- .4 Wood Preservation Plant shall
- .1 Follow the requirements for quality control procedures outlined in CSA-080.
- .2 Carry out inspection of all treated timber to AWPA M2 and

supplementary requirements as per
Clause 7 of CSA-080.

- .5 For all products treated with preservatives by pressure impregnation, reports shall be provided to the Departmental Representative, at no cost, containing all applicable information outlined in Part 7 of AWP M2.
 - .1 Results of treatment of each and every charge is required.
 - .2 Retention analysis shall be by the assay method.
 - .3 When timber is pressure treated a second time, results of both treatments are required.
 - .4 All reports shall be:
 - .1 Certified by an authorized officer of the treatment plant.
 - .2 In the format and the order presented in Part 7 of AWP M2.
 - .3 In metric (S.I.) units.
- .6 No treated timber shall be incorporated into the work until all results meet or exceed the requirements specified. No payment will be made for material incorporated into the work until the results are received and approved by the Departmental Representative.

- 1.7 Waste Management and Disposal .1 Do not dispose of preservative treated wood through incineration or with other materials destined for recycling or reuse.

PART 2 - PRODUCTS

- 2.1 Dimension Timber .1 Lumber: to CSA 0141, S4S, S-dry moisture content 19% or less to meet requirements of Wood Preserving Plant, grade stamped in accordance with NLGA and scheduled for use as follows:
 - .1 Dimension Timber to be No.1/No.2

grade, Hemlock or Douglas Fir.

2.2 Preservative
Treatments

- .1 Treat to CSA 080, with the following minimum assay retention.

SPECIES	Retention ACA	
	kg/m ³	kg/m ³
Dimension Timber		
Hemlock, Douglas Fir	24	24

Note: Creosote is not acceptable.

Dry all dimension timber to max. 25% moisture content after treatment.

2.3 Treated Plywood

- .1 Plywood back of Warning signs;
.1 Hemlock, fir;
.2 19mm thickness;
.3 Pressure Treated Copper azole (CA).

2.4 Machine Bolts,
Nuts, Washers

- .1 Machine bolts: strength equivalent to ASTM A307. Bolts to have standard heads, nuts and when in position will be of sufficient length to permit a full nut and two washers. Galvanized to ASTM A123/A123M, (610 kg/m²).
- .2 Threaded rods: strength equivalent to ASTM A307. Rods to have standard heads, nuts and when in position will be of sufficient length to permit a full nut and two washers.
- .3 Drift bolts: strength equivalent to ASTM A307. Pins to have button head and diamond or wedge point.
- .4 Washers suitable for the size of the

bolt specified will be placed under the heads and nuts of all machine bolts and rods bearing on timber surfaces unless noted otherwise on the drawings.

- .5 Acrylic adhesive anchoring system, for concrete and wet conditions.

PART 3 - EXECUTION

3.1 Installation

- .1 Install wood members true to line, levels and elevations, square and plumb.
- .2 Construct continuous members from pieces of longest practical length or as indicated.
- .3 Install spanning members with "crown-edge" up.
- .4 Install and secure as indicated on plans using acrylic anchor systems, bolts, nuts, and washers.
- .5 Drift pins: length of drift pins equal to thickness of timbers fastened less 50 mm, unless otherwise specified. Bore holes for drift pins 2 mm smaller diameter than pin and for full length of pin.

3.2 Field Treating Treated Timber

- .1 Treat, in field, cuts and damage to surface of treated material with an appropriate preservative as described in CSA 080. Ensure that damaged areas such as abrasions, nail and spike holes are thoroughly saturated with field treatment solutions as per CSA 080.
- .2 Treat bolt holes, cutoffs and field cuts in accordance with CSA 080.

3.3 Cutting

- .1 Field cuts, if authorized by the Departmental Representative, are to

receive three (3) liberal coats of the applicable preservative applied to dry wood on each application.

3.4 Field Quality

- .1 Timber which contains rot, splits exposing untreated wood, excessive wane, or timbers which cannot be fastened in the work so as to be structurally sound or if, in the opinion of the Departmental Representative, will not last the life of the unit, are unacceptable.
- .2 The Departmental Representative reserves the right to carry out field testing of treated timber for penetration and retention of preservative.
- .3 Timber not meeting the requirements of the specification may be rejected for use and is to be replaced with materials meeting contract specifications, at no additional cost.

END OF SECTION
