Amendment 002 is raised to answer the following bidder questions:

Question 1:

Referring to Annex A, Section 2, Criterion 28: Can the slip ring be mounted inside of the drum shaft? If so, how much volume is required inside of the shaft for to provide sufficient space for the electronics that connect to the slip ring?

Answer 1:

The rotating element of the slip-ring is to be mounted inside the drum shaft. Space is required to terminate the sea-cable to the slip-ring pigtail but this space is not required to be located in the drum shaft, it could also be located in an accessible cavity within the drum, yet outside the drum shaft.

A rectangular volume with minimum dimensions of 2.5" x 10" x 1.5" (64mm x 254mm x 38mm), or a cylindrical volume with minimum dimensions of 2.85" (73mm) diameter x 10" (254mm) length, is required for an electrical enclosure which will house the termination of the sea-cable and slip-ring pigtails. These volumes are inclusive of the space required to meet the minimum bend radius of the sea-cable and slip-ring pigtails.
