

Questions and Answers #1

Q1:

Task lights have been requested to have USB power and Regular 110 Volt plug in power integrated.

Please confirm that an alternate task light with just USB power can be supplied?

If not, we request that these lights be removed from the Cat 1, 2, 5 table for the RFB and procured separately as they have no impact on the workstation specification but limit the ability of suppliers to bid.

A1:

No – Asking for both a power outlet and USB is indeed within the scope and is allowed as per Article 3.6.4.4 of the Technical Specifications; which state: “Optional power outlet, either duplex, USB plug, or a combination of both, at base must be provided “.

R1 :

Non - Demander à la fois une prise de courant ordinaire et USB est en effet dans le champ d'application et est autorisé conformément à l'article 3.6.4.4 des Spécifications techniques; lequel dicte: « Une prise de courant optionnelle, soit une prise double ou une prise USB, ou une combinaison des deux ».

Q2:

Power bars have been requested with 5 outlets, surge protectors & 15ft long cords

Please confirm that an alternate power bar with just 4 outlets can be supplied?

If not, we request that these power bars be removed from the Cat 1, 2, 5 table for the RFB and procured separately as they have no impact on the workstation specification but limit the ability of suppliers to bid.

A2:

Yes a power with only 4 outlets minimum is acceptable.

R2 : Oui une barre d'alimentation avec un minimum de 4 prises de courant est acceptable.
