Questions re: Solicitation# 01044-20355A

1. As the end user will be handling the installation of the frames, will the amount of time required and ease of installation be considered in the evaluation process? A frame that can be installed 30 minutes faster than another frame could save a significant amount of money in installation costs.
 - No installation time will not be considered as part of the evaluation process.
2. Can you please clarify “minimum weight capacity of 250lbs. including the installed top”? For example, if the installed top weighs 30lbs, would this mean the requirement is for a weight capacity of 280lbs?
 - Maximum weight capacity is 250lbs including the installed top.
3. The federal gov’t SA requires electrical controls to be certified to be compliant with CSA C22.2 No 203. Is this also required for the frames on this solicitation?
 - All electrical components must comply with CSA standards and certifications.
4. Annex A, Specification 12 states “the legs of the electric height adjustable base must not stick out past the edge of 24" deep worksurface when the base is installed on aforementioned work-surface” and Annex A, Specification 2 states that the work-surfaces will range from 24" deep to 30" deep. Does this mean you are looking for two different feet sizes depending on the table top being used?
 - The base used will be the same for 24`and 30`deep surfaces. Only one size is required.
5. Is UL962 certification required for the entire frame, or would UL962 certification on the motorized columns and the control box (computerized parts) acceptable?
 - Yes it would be acceptable.
6. According to clause 6.11, “SACC B1501C for all Electric Equipment” must be applicable. What is the reason for another constraint which is mentioned in item 11 of ANNEX A (CSA C22.2 No.68-9 and UL 962)? We are kindly asking to modify the tender document and delete the item 11 on page 14 because SACC B1501C covers all of your concerns related to electrical parts.
 - All electrical equipment supplied under the Contract must be certified or approved for use in accordance with the Canadian Electrical Code, Part 1, before delivery, by a certification organization accredited by the Standards Council of Canada.

7. According to clause 6.4.1 (Delivery Date) of page 9, in order to meet the 4 weeks delivery time the bidders shall have a large number of required frames in the stock. Due to new year holidays and tight requested delivery time we will be thankful if you modify this clause and let the bidders offer their best possible delivery time even more than 4 weeks.

- **6.4.1 Delivery Date.**

Delivery of a minimum quantity of 209 bases must be received 4 to 6 weeks after contract award. The balance of 209 adjustable bases is required a maximum of 3 weeks after the initial shipment is received. **AAFC must receive the shipment on a Saturday between 8am to 11am.**
