Question 6:

1.9 Must automatically detect and redistribute unbalanced loads.

Is it a mandatory criteria. Because even most of the machine has this feature but none of them mentioned anywhere in the spec. So it will be difficult for the cross reference even our machine fulfill this criteria. So our proposal is as most of the machine has this feature so pls avoid this mandatory criteria as it is difficult to proof by cross reference.

Answer 6:

The feature mandatory but if no cross-reference is available, then a statement indicating the product offered will automatically detect and redistribute unbalanced loads is sufficient.
