Demande de renseignements – Modification #1

Réaction du gouvernement du Canada face au glissement de terrain dans le fleuve Fraser

Suite à la réunion WebEx qui a eu lieu le lundi 2 décembre 2019, les commentaires suivants sont fournis :

- Les coordonnées GPS du site sont 51.2190°N, 122.1518°W.
- La Première nation de High Bar doit être contactée avant toute visite sur le site. Pour coordonner une demande, veuillez communiquer avec :
Dale Michie
Conseiller aux affaires autochtones par intérim
Pêches et Océans, Secteur du Fraser et de l'Intérieur
Dale.Michie@dfo-mpo.gc.ca
250-851-4946
- L'assurance et la garantie de contrat / exigences de cautionnement peut varier, selon la version finale du travail à accomplir. Toutefois, le Canada reconnaît qu'un projet de cette nature (des préoccupations liées à la sécurité, possible de l'air et de travail maritime) est très complexe et nécessitera une plus grande responsabilité que la normale. Veuillez fournir vos commentaires au sujet de ce qui est offert sur le marché, ce que sont les niveaux appropriés d'assurance, et / ou ce que sont les responsabilités à limiter.
- La Liste des fournisseurs intéressés (LFI) est un service en ligne qui permet aux fournisseurs d'ajouter le nom de leur entreprise à la liste, de façon optionnelle, et de manifester publiquement leur intérêt pour un avis d'appel d'offres actif du gouvernement du Canada.

Afin d'encourager la collaboration entre les différentes parties, veuillez consulter le lien de la DDR dans Achats et Ventes pour « Rejoindre la liste des fournisseurs intéressés par DDR - glissement de terrain dans le fleuve Fraser de Big Bar (EZ899-202159/A). »
« <https://achatsetventes.gc.ca/donnees-sur-l-provisionnement/appels-d-offres/PW-PWY-025-8699/liste-des-fournisseurs-interesses/joignez-vous-a-la-liste-des-fournisseurs-interesses> »

- Des copies des diapositives qui ont été présentés sont jointes au présent document.

Big Bar Landslide Response Update & Next Steps

PSPC WebEx - December 2 2019

Before and After...

Shared Governance

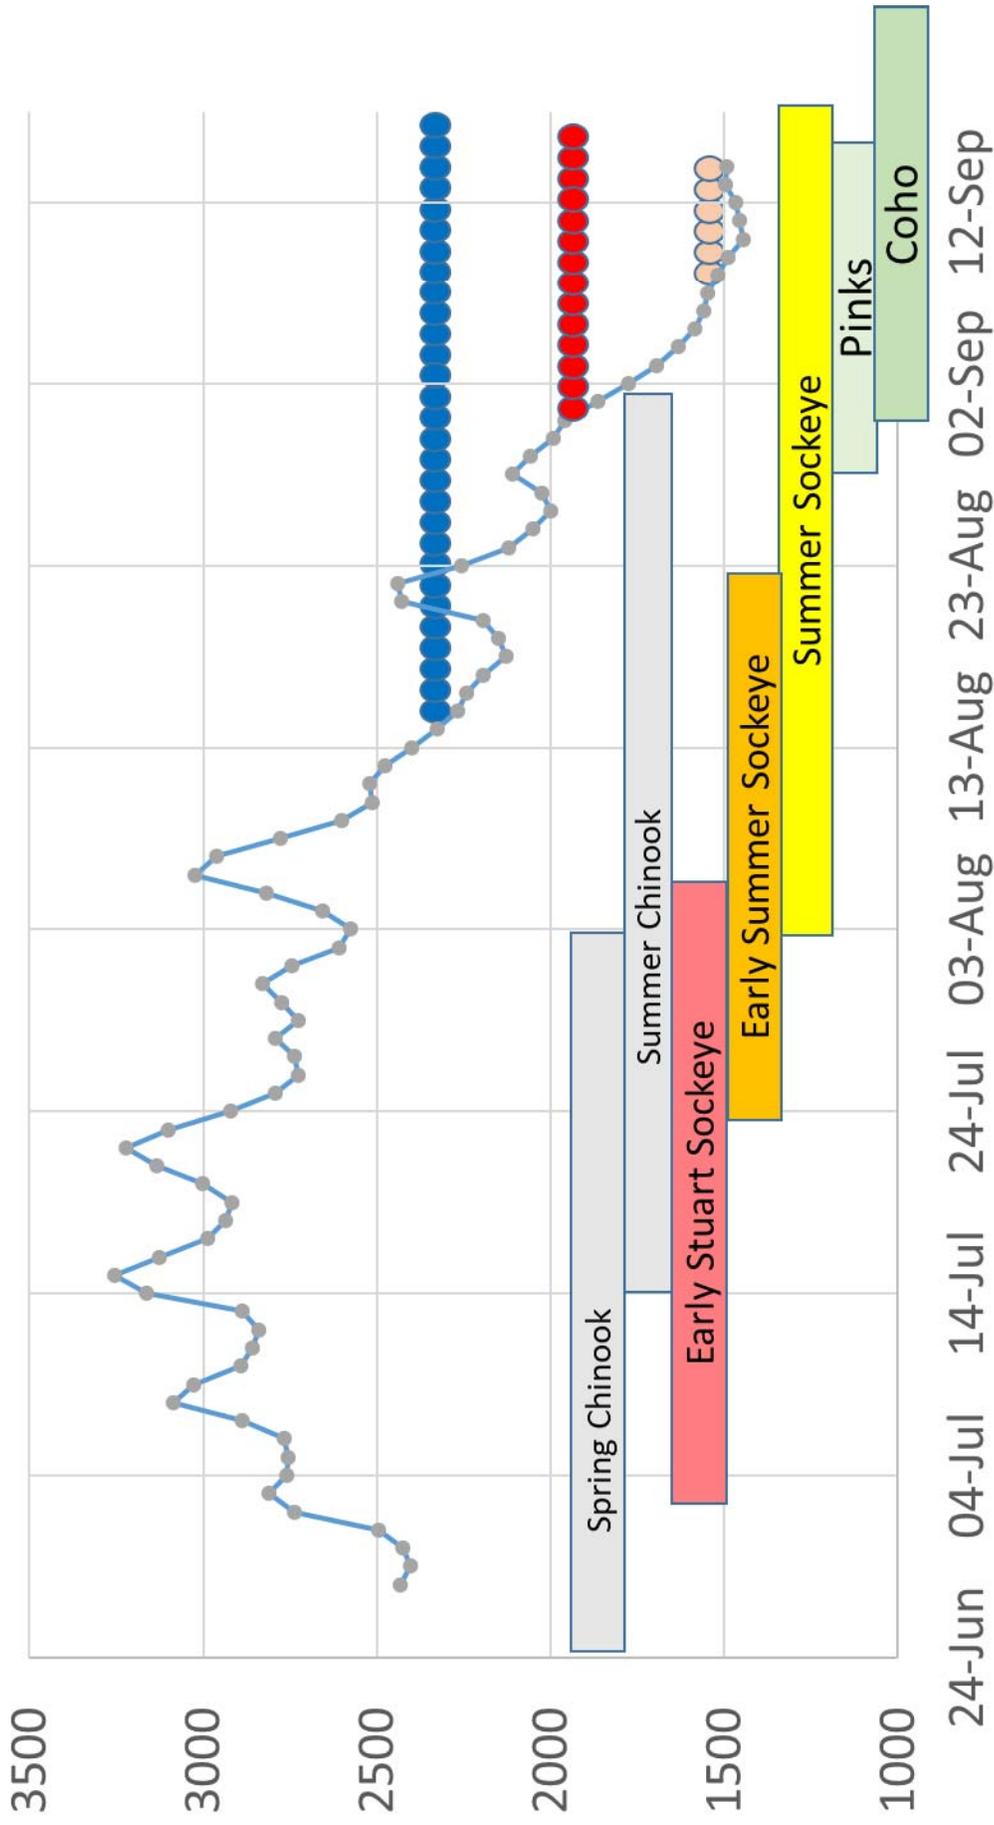

- **Government-Government (3G) collaboration** lets us highlight our unique strengths and overcome national obstacles as a unified force
- The Big Bar landslide response was unique, in that it established a **trilateral Joint Executive Steering Committee, (JESC)** and a **First Nations Leadership Panel**, as part of its governance oversight approach.
- During the initial incident response phase, a tripartite **incident command post (ICP)** was established, led by three Incident Commanders, under a Unified Command.
- The Incident Command System (ICS) is a **standardized on-site management system** designed to enable effective, efficient, integrated incident management **within a common organizational structure**.
- The primary government agencies involved to date have been DFO, FLNRORD, FRAFS, CCG, BC Wildfire Service, EMBC, and FNESS.

Incident Phase - Chronology of Events

- **June 23, 2019** - Rock slide was discovered
- **June 29, 2019** – ICS - Trilateral Unified Command was established, including First Nation Leadership Panel
- **Mid July 2019** – Work onsite commenced, with initial focus safe site access
- **July 20, 2019** – Fish trapping and transport operations begin
- **Sept 1, 2019** – 30,000 fish/day monitored passing unassisted through slide
- **Sept 4, 2019** – Fish transport operations paused (monitoring on-going)
- **Sept 27, 2019** – Transition to Project Management
- **Oct 14, 2019** – Rock scalers demobilized
- **Oct 23, 2019** – Fish tagging operations end

Natural passage related to changes in flow: Fraser River discharge at Lillooet

Fish unable to pass unassisted

Fraser Salmon – Economic Snapshot

- Fraser River is one of the largest salmon producers in the world.
- Fraser salmon hold an incredibly significant importance to many First Nations in British Columbia. More than 140 First Nations in BC are annually licensed to fish Fraser salmon for food, social and ceremonial purposes; Indigenous fishers also represent a significant portion of the commercial salmon fishery.
- Approximately 78% (\$45.4M) of the total BC commercial salmon landed value coast-wide comes from areas that are highly impacted by the slide. Only areas A and C have negligible impacts.
- On average between 2015 and 2018, the British Columbia commercial salmon industry supported more than 2,600 jobs in harvesting and processing, and was valued at \$146.2 million.
- The overall recreational salmon fishery in British Columbia is responsible for approximately \$742 million in annual revenues for businesses that service the angling community and roughly \$319 million in GDP annually.

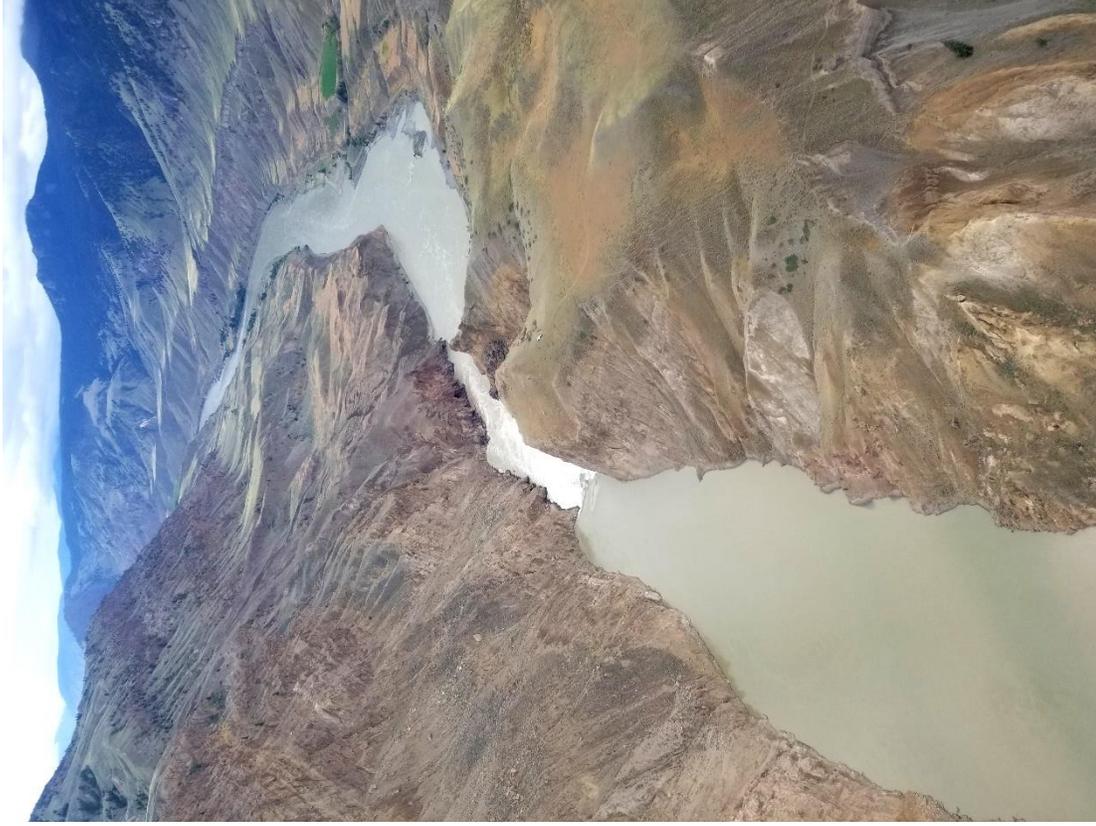

Summary

- More than \$15 million and significant efforts have been invested in responding to Big Bar landslide to date.
- On September 27th, the emergency incident response transitioned from ICS to Project Management:
 - Rock debris from the slide continues to create an impassable water velocity and height barrier for migrating salmon at water levels exceeding 2200 cms.
 - Unless sufficient rock debris is removed to reduce the flow rate before water levels are expected to begin to rise in March 2020, Fraser River salmon populations that migrate before late August will be significantly affected.
 - Time is of the essence, as there is less than five months before the salmon migration cycle begins again
 - Contingency planning is also required to support early migrating salmon should velocity and height barriers remain impassable in early 2020; a longer-term multi-year response, including feasibility studies for different options, may also be needed.

- **A multi-faceted program, involving dedicated federal, provincial and Indigenous capacity, is being actioned to restore upstream fish access at the Big Bar slide.**

Planned winter 2019-20 fish passage remediation component

- Urgency to complete before water levels rise for spring freshet
- RFI – Closing December 6th
 - Soliciting industry feedback on constructability and potential technologies or approaches;
 - identification of potential contractors who possess specialized equipment, expertise and experience; and
 - identification of Indigenous business with the capacity to conduct operations.
- Engineering design underway

Plan View – Channel

Anticipated Project Challenges include...

- **Short winter window** for fish passage remediation work
- **Access** to site
- **Few precedents** of this scale
- **Operating conditions** (i.e. highly inclement weather, remoteness, unstable terrain)
- **Current population status** of many Fraser salmon and steelhead
- Importance of **clear and frequent communications**, especially given high levels interest
