

Dishwasher maintenance procedure

Step 1

Clean the appliance regularly following the 13-step procedure indicated on the equipment. All external and internal surfaces of the appliance must also be cleaned regularly to avoid calcium buildup.

Step 2

Make sure to thoroughly clean these pipes.

Step 3

Provide the two cleaning products necessary to the functioning of the appliance. Also, make sure that the distributors are in operation and provide the products required by the appliance. Your product supplier must carry out periodic maintenance or an inspection to confirm that everything is functional

Step 4

Provide the salt for the water softener. Make sure that it works. In case of doubt, inform CSA personnel to do an inspection
