Questions and answers and photos of the actual UPS.

Questions and answers:

Q16: It was clear from the site visit that there is more than enough room to allow bidders to propose a taller Uninterruptible Power Supply (UPS) than 2.0 m in height. Given this fact, and in the interest of fair and open competition, will Canada please amend the requirement to increase the allowable height of the UPS to be 2.1 m?

A16: Yes, the Maximum height must be 2.1 meters.

Q17: Runtime is always based on load in kW and not kVA. Can you please confirm that the runtime requirements are 5 minutes at 27kW?

A17: The runtime requirement is 9 minutes at 27KW as specify (question 5).

Q18: The Input THDi for UPS varies according to the load. Can you please confirm that the THDi requirement is < 3% at a load of 27kW?

A18: The THDi requirement is < 3% at full load, 27kW.

Q19: I need clarification on the pricing requested for the 30kva UPS.

On page 16 of 21 it states "the work consists of supply, delivery, startup and commissioning of UPS. In the pricing page on page 18 of 21 it states installation startup and commissioning"

Can I assume that the electrical disconnection and electrical connections of the UPS is not part of the requirement as well as removal of old UPS. In the last question answer #1 it mentions that if the existing wiring does not fit it would be the responsibility of the UPS supplier to include the wiring. Based on the data provided in the answers to questions the existing wiring will support a 30 kva UPS.

A19: If you decide to supply a bigger UPS and the feeder of the UPS needs to be changed, it has to be at the cost of the supplier. NRC cannot assume these costs as we do not require a bigger UPS.
