This solicitation amendment is to incorporate the following changes:

1) Addition of the bidders questions and Canada responses

Question number	Bidder Question description	Canada Response description
1	The Statement of work doesn't mention anything about containment, are there any permits required to carry out this power washing of the underwater hull while she is alongside at the coast guard base at Huron Street?	Please note that the contract will be carried out at the Institute of Oceans sciences, 9860 West Saanich road, Sidney, BC. (On Patricia Bay, at the west end of Victoria International Airport).
2	In order to comply with section 7.14 of the Invitation to tender; has special permission been made or will there a be requirement for the contractor to obtain permitting from the Department of Fisheries And Oceans, Ministry of Environment or other governmental agencies to perform the scope of work outlined in the specification. Specifically, the alongside vessel cleaning of the underwater hull, appendages, and propulsion in a restricted harbour without containment measures in place. Also, can Canada confirm that no ablative hull coatings that would pose risk to the environment are present on the CCGS Bartlett.	Canada has conducted a pre-inspection of the underwater hull. Due to the lack of marine growth found, Canada has removed the requirement for the underwater hull cleaning portion of the statement of work. SOW: F1782-19C090-SOR Underwater and Internal Inspection-Bartlett (English) Rev 2 and PDS -F1782-19C090- Bartlett Underwater hull survey and cleaning V01.xlv are available to bidders upon request to the contracting authority
3	"After speaking with the tech again and reviewing the new spec, they tell me they cannot do the NDT readings without a clean hull in the area on the readings. The spec calls 1000 shots, those areas will need to be clear of all algae, barnacles blisters etc. Can we assume that if we scrub the area in way of the shot with a scrubbing pad, the spot will be clean enough to take the reading? All other cleaning will be by 1379 action?"	A scrubbing pad will be sufficient to remove the algae from the hull in order to achieve the required cleanliness for NDT ultrasonic thickness readings. Any further cleaning required will be by PSPC 1379 Work Arising action.
4	In reference to the SOW 11.2.B.2.2 Can we obtain the drawings and report(Bidders to request these drawings and report from the contracting officer.

All other terms and conditions remain unchanged
