ANNEX ``A``

STATEMENT OF REQUIREMENT

1. TITLE

MATRIX ASSISTED LASER DESORPTION IONIZATION TIME OF FLIGHT MASS SPECTROMETER

2. BACKGROUND

To support ongoing research efforts in biomarkers of injury, metabolomics and proteomic analyses of injury and intoxicant exposures. Defence Research and Development Canada Suffield Research Centre (DRDC-SRC) requires a Matrix Assisted Laser Desorption Ionization Time of Flight Mass Spectrometer (MALDI TOF MS). The MADLI TOF MS is a standard tool for the high resolution analysis of proteins, peptides, and chemical species. One licenced diagnostic application of the system is in the identification and characterization of microbial samples, in order to define species, strain, and antibiotic profiles of the microbes. A recent additional capability of MALDI TOF MS instruments is the development of MALDI imaging mass spectrometry (MALDI-IMS); two or three dimensional rendering of the distribution of protein, peptides, or drug species within tissue thin slices. These combined capabilities require an instrument capable of wide mass discrimination and wide sample type tolerance. The system should have a track record of regulatory approval in the USA or Canada in clinical diagnostics. This regulatory approval ensures compatibility and applicability of diagnostic assays developed on the instrument, to clinical requirements.
