

r54224 Q&A

Q1: Given that SSC is unwilling to accept a range for the 2 following requirements of this bid and is only willing to except exact measurements that would only allow for one manufacture model from ESI, can SCC provide justification or reasoning for this? Is there a rational to use only 6.5" stems and 16.3" extensions? If the solution that is to be provided is to allow for 2 x 28" max monitors to be placed side by side on sliders without interference to a panel, why would other manufacture options not be allowed to be considered?

3.1.5. 6.5" arm stem

3.1.4. 16.3" arm extension

Please advise.

A1: We are not changing the requirements that are listed. The specifications listed are required to meet our requirements in our projects.
