This solicitation amendment 004 is raised to address bidders questions.

Question 1:

Box on the platform (Transport of 20 standard weights of 500 kg). Please provide the dimensions of the box and exact location on the platform.

Answer:

The dimensions of the box must contain 20 weights of 500 kg in a row of 4 wide x 5 rows deep, the tenderer must ensure the distribution of the load to ensure compliance with the various regulations. The internal dimensions of the current weight box on the truck of Measurement Canada (measures taken with ¼ inch protective Teflon coating installed) are 70 ½ inches wide x 88 ½ inches long x 24 inches high. There is a 2 ½ inch flare on the top of the box to facilitate the entry and exit of the weights of 500 kg (Material thickness ¼ inch). Dimensions within -- 0 or +2 inches of the current weight box dimensions are acceptable.

Question 2:

Box on the platform (Transport of 20 standard weights of 500 kg). Please provide the height of compartments for each standard weight.

Answer:

Please refer to the dimensions of the 500 kg standard (annexe A specifications picture 4), the 500 kg must be protected inside the box.

Question 3:

Cutlery from the box. Please provide the dimensions and specifications for the cover.

Answer:

Please refer to the photos on Annexe A specifications, currently the covers are made in two inclined parts which open towards the outside of the vehicle.

Question 4:

Cutlery from the box. Cover shape and angle?

Answer:

Shape and angle allowing rain and snow to flow. The weight box on the actual Measurement Canada truck is covered by a cover which is made in two parts. The slope of the cover is approximately 2/3. The dimensions of each part of the current cover of the box are 43 inches wide x 95 inches long. The sides are made of a 36 inch x 24 inch triangle with a 43 inch hypotenuse. The dimensions of the cutlery offered must be according to the dimensions of the proposed weight box

Question 5:

Cutlery from the box. Is it mandatory pneumatic or it can be hydraulic?

Answer:

The opening must be pneumatic.

Question 6:

The command to open - close the cover must be from the cabin, is a function on the crane remote control ok or we need to put a controller apart?

Answer:

Either solution is acceptable as long as opening / closing operations can be carried out from the cabin.

Question 7:

Can we have clearer pictures of the box and its cover?

Answer:

See pictures attached (reference only).
