Description of Work:

The Applications Support and Maintenance Division (ASMD), CIPO Application Development and Support Directorate (CIPOADSD) requires the services of a Senior JAVA Architect to provide expertise in JAVA architecture, analysis, design, development, implementation and support. This resource will be required to define, plan, develop large scale application and component architectures in a diverse, distributed technical environment based on specifications and requirements according to ISED's standards and guidelines and legislative requirements for CIPO Trademarks, Patents and Industrial Design application enhancements. Their duties will include but not be limited to the following:

- Participate in working group sessions/interviews/meetings with stakeholders to gather requirements;
 - Contribute in all phases of the Agile Software Development Lifecycle;
 - Participate in agile scrum meetings;
 - Provide architecture solution recommendations, and drive delivery of the architecture in collaboration with the project team;
 - Collaborate with team members to develop dynamic and flexible JAVA architecture to meet the client needs;
 - Assess the impact that changes in the technical architecture may have on business operations and procedures including systems maintenance and support and impacts on the technical infrastructure;
 - Conduct technology planning, software evaluation and selection for the Java – Websphere AIX production and Windows Websphere development environment;
 - Develop and document large scale application and component architectures for both internal and external facing systems (Intranet, WEB) in line with existing architectural principles as they apply to Java development;
 - Conduct integration of Java component operations with supporting mainframe component operations including CA Gen and CM8 applications;
 - Work with the CIPO lead application architect to ensure Java applications and components are developed in a consistent manner with architectural principles;
 - Develop strategies and plan related to the use of Java for Web-based and non-Web-based applications;
 - Provide technical leadership and mentoring to the project team in the design and development of Java applications and components;
 - Design, develop, document and test Java applications, components and Web Services, both directly and in support of the project team; and
 - Implement principles and procedures in support of developed strategies and plans.
 - Produce technical documentation and procedures as per ISED's standards and guidelines and legislative requirements;
 - Provide technical and functional guidance when required;
 - Educate new and existing team members on project specifics, various technologies, approaches, and architectures;
 - Present demonstrations to stakeholders when required;
 - Perform knowledge transfer and mentoring of staff;
 - Transfer functional and technical knowledge to ISED employees through such methods as training, demonstrations, written instructions and documentation on an ongoing basis throughout the life of the initiatives/project(s);and
 - Complete and submit time sheets for approval by project authorities using the internal Project Tracking System.
-
- Bidders must submit a bid for all resource categories
 - The work is currently being performed by Adirondack Information Management Inc.
