

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001****Removal or Processing of Existing Asphalt
(Milling and Pulverization)**

Page 1

PART 1 - GENERAL

- 1.1 Related Work
- .1 Refer to other Specification Sections for related information.
 - .2 Refer to **Section 01 33 00** for Shop Drawing/Submission requirements.
- 1.2 Description
- .1 This Section covers the removal or processing of existing asphaltic concrete within the project limits, as follows:
 - .1 Partial depth removal means to remove a portion of existing asphaltic concrete thickness with minimal disturbance to the remaining asphaltic concrete.
 - .2 Full depth removal means to remove the full depth of existing asphaltic concrete with minimal disturbance to the underlying granular base material.
 - .3 Full depth reclamation means to process the existing asphaltic concrete and upper granular base material in-place.
- 1.3 Measurement for Payment
- .1 Removal or Processing Of Existing Asphalt (Milling & Pulverization) will be measured in accordance with **Section 01 29 00**.

PART 2 - PRODUCTS

NOT APPLICABLE

PART 3 - EXECUTION

- 3.1 Preparation
- .1 Prior to commencing removal operation, inspect and verify with Department Representative areas, depths and lines of asphalt concrete pavement to be removed and appropriate removal technique(s).
 - .2 Prior to commencing removal operation, all debris, deleterious material, and existing windrows shall be removed from the roadway surface, including material beyond the

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001****Removal or Processing of Existing Asphalt
(Milling and Pulverization)**

Page 2

theoretical roadway width, to provide positive drainage.

- .3 Prior to full depth removal or full depth reclamation operation, cut existing pavement vertically to full depth of asphalt surface along any lines where existing adjacent pavement will remain intact.

3.2 Equipment

- .1 For partial depth removal, use cold milling equipment capable of removing a portion of the existing asphaltic concrete pavement surface to depths or grades indicated. The equipment used for partial depth removal shall be automatically controlled for grade and slope during removal.
- .2 For full depth removal, use milling equipment and/or hydraulic excavator capable of removing the full thickness of asphaltic concrete to depths or grades indicated.
- .3 For full depth reclamation, use road reclamation equipment capable of pulverizing the full thickness of existing asphaltic concrete and a portion of the upper granular base material to sufficient depth such that the resulting blend of Reclaimed Asphalt Pavement (RAP) and granular material is approximately 50:50.

3.3 Removal

- .1 For partial depth removal:
 - .1 Remove the full width of the existing asphaltic concrete by milling to the depths and grades indicated.
 - .2 The surface remaining after removal shall have a constant and continuous crossfall matching the intended surface course crossfall.
 - .3 The surface remaining after removal shall have an even texture and be free of significantly different grooves and ridges in all directions.

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001****Removal or Processing of Existing Asphalt
(Milling and Pulverization)**

Page 3

-
- .2 For full depth removal:
 - .1 Remove the full width of the existing asphaltic concrete by milling or excavation to the depths and grades indicated, with minimal disturbance to the underlying granular surface.
 - .2 The granular surface remaining after removal shall be graded and compacted to have a constant and continuous crossfall matching the intended base and/or surface course crossfall.
 - .3 For full depth reclamation:
 - .1 Pulverize the full thickness of existing asphaltic concrete and a portion of the upper granular base material to depth(s) indicated.
 - .2 The resulting blend of Reclaimed Asphalt Pavement (RAP) and granular material shall be graded and compacted to have a constant and continuous crossfall matching the intended base and/or surface course crossfall.
 - .4 Temporary transverse ramping for any process shall be as specified in the Contract Documents. If due to unforeseen circumstances, removal cannot be done full width prior to shut down at the end of the day, then temporary, longitudinal ramping shall also be provided as specified in the Contract Documents. All ramping shall be removed prior to placing adjacent hot mix asphalt pavement.
 - .5 Removed asphalt pavement material shall not remain on the marshalling yard after completion of the day's operation unless authorized by the Department Representative. Placing of the material on grade other than a bituminous surface prior to hauling to a stockpile shall not be permitted.

Project No. R.090690.001

Aggregate Base Courses

Page 3

.2 Type 1 granular fill gradation will be within following limits when tested in accordance with ASTM C117 and ASTM C136:

ASTM SIEVE SIZE	% PASSING BY MASS
20 mm	100
14 mm	50 - 85
5 mm	20 - 50
0.16 mm	5 - 12
0.080 mm	3 - 8 ⁽¹⁾

(1) For gravel sources not classified as quarries the allowable percentage passing the 0.080 mm sieve shall be 3 to 5%.

.3 Granular material shall conform to the physical properties requirements listed in the following table:

Property	Test Method	Limit
Absorption (% Maximum)	ASTM C127	1.75
Los Angeles Abrasion (loss % Maximum)	ASTM C131	40
Fractured Particles, one face (% Minimum)	TPW TM-3	80
Plasticity Index	ASTM D4318	3
Micro-Deval (% Maximum)	TPW TM-1	20

PART 3 - EXECUTION**3.1 Placing**

- .1 Do not place granular base until finished sub-base surface is inspected and approved by *Departmental Representative*.
- .2 Place material only on a clean unfrozen surface, properly shaped and compacted and free from snow and ice.

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Aggregate Base Courses

Page 4

-
- .3 Ensure no frozen material is placed.
 - .4 Construct aggregate base to depth and grade in areas indicated.
 - .5 Place using methods which do not lead to segregation or degradation of aggregates.
 - .6 Begin spreading aggregate base material on crown line or high-side of one way slope.
 - .7 Place material to full width in a uniform layer to 150 mm compacted thickness. *Departmental Representative* may authorize thicker lifts (layers) if specified compaction can be achieved.
 - .8 Shape each layer to a smooth contour and compact to specified density before succeeding layer is placed.
 - .9 Remove and replace portion of layer in which material has become segregated during spreading.

3.2 Compacting

- .1 Compact to density not less than 98% maximum dry density in accordance with ASTM D698.
- .2 Shape and roll alternately to obtain a smooth, even and uniformly compacted base.
- .3 Apply water as necessary during compacting to obtain specified density. If material is excessively moist, aerate by scarifying with suitable equipment until moisture content is corrected.
- .4 In areas not accessible to rolling equipment, compact to specified density with approved mechanical tampers.

3.3 Finish

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Aggregate Base Courses

Page 5

<u>Tolerances</u>	.1	Finished base surface shall be within plus or minus 10 mm of established grade but not uniformly high or low.
	.2	Correct surface irregularities by loosening and adding or removing material until surface is within specified tolerance.
3.4 <u>Maintenance</u>	.1	Maintain finished base in a condition conforming to this section until succeeding material is applied or until acceptance by <i>Departmental Representative</i> .

Nominal Clear Stone

Page 1

PART 1 - GENERAL

- 1.1 Related Work
- .1 Refer to other Specification Sections for related information.
 - .2 Refer to **Section 01 33 00** for Shop Drawing/Submission requirements.
- 1.2 Submissions
- .1 Product Data/Samples:
 - .1 Provide samples of materials proposed for the work.
 - .2 Methodology:
 - .1 Provide methodology for carrying out the work.
 - .3 Provide submissions in accordance with **Section 01 33 00**.
- 1.3 Measurement for Payment
- .1 All classes of Nominal Clear Stone will be measured in accordance with **Section 01 29 00**.

PART 2 - PRODUCTS

- 2.1 Materials
- .1 Nominal Clear Stone
 - .1 Material to **Section 31 05 17** and to be a stone consisting of hard, durable particles, free from clay lumps, silt, cementation, organic material, frozen material and other deleterious foreign materials. Clear stone to be free from splits, seams or defects likely to impair its soundness during handling or under action of water.
 - .2 Specific gravity of not less than 2.65 when tested to ASTM C127 (AASHTO T85).
 - .3 25 mm Clear Stone gradation will be within the following limits:
-

12.5 mm	0 - 10

PART 3 - EXECUTION3.1 Placement

- .1 Clear stone can be end dumped provided that no breakage of stone occurs. Any broken rock shall be removed at the contractor's expense.
- .2 Place clear stone at maximum density.

3.3 Protection

- .1 Take into account anticipated weather conditions and degree of exposure of site in setting requirements for protection.
- .2 Schedule and carry out construction so that each phase of work is not left exposed longer than necessary.
- .3 The Contractor should note that the work site is subject to water level variations due to tidal action.
- .4 The Contractor will be responsible to replace any mattress lost due to storms, tidal erosion or by his own activities.

Asphalt Tack Coat

Page 2

-
- .1 Is maintained at even temperature. May be applied uniformly on variable widths of surface up to 5 metres.
 - .2 May be applied at readily determined and controlled rate of 0.14 L/m² with uniform pressure, and with an allowable variation from any specified rate not exceeding 0.04 L/m².
 - .2 Capable of distributing asphalt material in uniform spray without atomization at temperature required.
 - .3 Equipped with meter registering metres of travel per minute, visibly located to enable truck driver to maintain constant speed required for application at specified rate.
 - .4 Equipped with pump having flow meter graduated in units of 5L or less per minute passing through nozzles and readily visible to operator. Pump power unit to be independent of truck power unit.
 - .5 Equipped with an easily read, accurate and sensitive device which registers temperature of liquid in reservoir.
 - .6 Equipped with accurate volume measuring device or calibrated tank.
 - .7 Equipped with nozzles of same make and dimensions, adjustable for fan width and orientation.

3.2 Application

- .1 Apply tack coat only on clean and dry surface. Obtain Department Representative's approval of surface before applying asphalt tack coat.
 - .2 Dilute asphalt emulsion with water at 1:1 ratio for application. Mix thoroughly by pumping or other method approved by Department Representative.
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Asphalt Tack Coat

Page 3

-
- .3 Apply tack coat evenly to pavement surface at rate as directed by Department Representative but do not exceed 0.7 L/m².
 - .4 Paint contact surfaces of curbs, gutters, headers, manholes and like structures with thin, uniform coat of asphalt tack coat material.
 - .5 Do not apply asphalt tack coat when air temperature is less than 5°C or when rain is forecast within 2 hours of application.
 - .6 Apply tack coat only to base coarse surfaces that are expected to be overlaid on same day.
 - .7 Evenly distribute localized excessive deposits of tack coat by brooming as directed by Department Representative.
 - .8 Where traffic is to be maintained, treat no more than one half of width of surface in one application.
 - .9 Keep traffic off tacked areas until tack coat has set as directed by Department Representative.
 - .10 Re-tack contaminated or disturbed areas as directed by Department Representative.
 - .11 Permit tack coat to set before placing asphalt paving.
-

-
- .15 ASTM C136-14, Method for Sieve Analysis of Fine and Coarse Aggregates.
 - .16 ASTM D995-996 (2002), Specification for Requirements for Mixing Plants for Hot-Mixed, Hot-Laid Bituminous Paving Mixtures.
 - .17 ASTM D2041-11, Standard Test Method for Theoretical Maximum Specific Gravity and Density of Bituminous Paving Mixtures
 - .18 ASTM D2950-14, Standard Test Method for Density of Bituminous Concrete in Place by Nuclear Methods.
 - .19 ASTM D3203-17, Test Method for Percent Air Voids in Compacted Dense and Open Bituminous Paving Mixtures.
 - .20 ASTM D3515-01, Standard Specifications for Hot Mixed, Hot Laid Bituminous Paving Mixtures.
 - .21 ASTM D4469-17, Standard Method for Calculating Percent Asphalt Absorption by the Aggregate in an Asphalt Pavement Mixture.
 - .22 CAN/CGSB-8.2-M88 (R10/3 Series), Sieves Testing, Woven Wire, Metric.
 - .23 CAN/CGSB-16.3-M90, Asphalt Cements for Road Purposes.
 - .24 ASTM D4867 with Lottman Conditioning.

1.3 Related Work

- .1 Refer to other Specification Sections for related information.

1.4 Samples

- .1 Submit samples in accordance with the Section 01 33 00 - Submittal Procedures.
- .2 At least 4 weeks prior to commencing work submit samples of following materials proposed for use:
 - .1 One 4L container of asphalt cement.

1.5 Material Certification

- .1 At least 4 weeks prior to commencing work submit viscosity-temperature chart for asphalt cement to be supplied showing kinematic viscosity in mm²/s versus temperature range from 105° to 175°.
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 3

-
- .2 At least 4 weeks before commencing work, submit refinery's test data and certification that asphalt cement meets requirements of this section which also includes the specific gravity of the asphalt cement.
- 1.6 Submission of Mix Design
- .1 Samples of aggregate for mix design shall be derived from stockpiles not less than 1000 tonnes of each of fine and course aggregate.
- .2 The Contractor will submit, in writing, asphalt concrete mix design and trial mix test results to Department Representative for review at least 4 weeks prior to commencing work. The mix design shall contain the job mix formula which shall include the following criteria for NBDTI Type B/HRB and Type D/HRB:
- Asphalt cement content
 - Specific gravity and absorption of each aggregate, including natural blend sand, lime, and RAP (if used)
 - Percentage of each aggregate
 - Gradation of Job Mix Formula
 - Bulk Specific Gravity, kg/m³
 - Maximum theoretical density, kg/m³
 - Percentage voids in mineral aggregate
 - Percentage air voids
 - Percentage voids filled
 - Percentage of absorbed asphalt cement
 - Long term TSR (ASTM D4867)
 - All superpave mix design characteristics, including graphs used in arriving at the final mix design, the bulk relative density of the combined aggregates, and the asphalt absorption of the combined aggregates.
- 1.7 Delivery and Storage
- .1 Deliver and stockpile aggregates. Stockpile outside of park boundaries, a minimum 50% of
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 4

total amount of aggregate required before commencing asphalt concrete operations.

- .2 Coarse aggregate stockpile shall contain no more than 15% passing 4750 sieve.
- .3 Fine aggregate stockpile shall contain no more than 15% retained on 4750 sieve.
- .4 When necessary to blend aggregates from one or more sources to produce required gradation, do not blend in stockpiles.
- .5 If applicable, The Contractor shall be responsible for the incorporation of RAP in to the asphalt concrete mix. The Contractor shall be responsible for collecting 6 RAP samples during milling operations over the portion of the milling operations over the portion of the milling area needed to produce the recycle mix. Only RAP obtained from the project site may be incorporated into the recycle mixes.
- .6 When dryer drum mixing plant is used, stockpile fine aggregate separately from coarse aggregate.
- .7 Provide approved storage, heating tanks and pumping facilities for asphalt cement.

1.8 Measurement
For Payment

- .1 Hot mix asphalt paving will be measured in accordance with **Section 01 29 00.**

PART 2 - PRODUCTS

2.1 Materials

- .1 Asphalt Cement: to M322 Table 1 for PG 58H-28.
- .2 Aggregates:
 - .1 Coarse aggregate to be supplied for the manufacture of asphaltic concrete shall consist of crushed stone, composed of clean, sound, hard and durable

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 5

particles free from a coating of silt, and/or clay and shall not contain other deleterious materials. Coarse aggregate shall conform to the physical requirements for coarse aggregate shown in Table 2.1-2.

- .2 Irrespective of compliance with the physical requirements of Table 2.1-2, a coarse aggregate may be rejected on the basis of past field performance.
- .3 Fine aggregate to be supplied for the manufacture of asphaltic concrete shall consist of manufactured material processed by crushing quarried rock or natural sand and gravel, the particles of which shall be clean, hard, durable and free from coatings of silt, clay or other deleterious material. Fine aggregate shall conform to the physical and gradation requirements shown in Table 2.1-3 and the fraction between any two of the following consecutive sieves (4.75 mm, 2.36 mm, 1.18 mm, 600 µm, 150 µm) shall be a minimum of 7%. A minimum of 25% fine aggregate, processed by crushing quarried rock, shall be incorporated into all asphaltic mixes.

Table 2.1-2
Physical Requirements for Coarse Aggregate

Test	Type B/HRB	Type D/HRD	ASTM
Crushed Particles (min % by wt, one face)	95	95	NBDTI method
Crushed Particles (min % by wt, two face)	80	80	NBDTI method
Absorption, Mass %	1.5	1.5	C127
Freeze/Thaw % (max)	14	12	NBDTI method
Flat and Elongated, Max %	20	15	NBDTI method
Petrographic Number, Max.*	230	180	MTO LS-609
Micro Deval, 1% Max	18	15	MTO LS-618

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 6

*Not Mandatory, the owner reserves the right to obtain

- (1) Crushed percentage is determined from the fraction of particles by mass retained on the 4.75 mm sieve.
- (2) Petrographic number to be determined using current MTO LS-609 test procedures.

Table 2.1-3
Physical and Gradation Requirements for Fine Aggregate

Test	Type B/HRB	Type D/HRD	ASTM
Micro Deval, Max %	20	17	MTO LS-619
Fine Aggregate Angularity, % Min	45	45	C1252

.3 Blending Sand:

- .1 Blending sand supplied for the manufacture of asphaltic concrete shall consist of clean, tough, durable particles, free from silt clay and other deleterious material.
 - .2 The gradation of the blending sand shall be such that when incorporated into the asphaltic concrete mix, the resultant mix shall meet the requirements of Tables 2.2-4, 2.2-5 and 2.2-6.
 - .3 The blending sand shall have 100% passing the 9.5.
 - .4 RAP:
 - 1. If incorporated, the amount of RAP in the hot mixed recycled asphalt concrete base mix shall be not more than 20% of the total weight of the combined aggregates.
 - 2. If incorporated, the amount of RAP in the hot mixed recycled asphalt concrete surface mix shall be not more than 20% of the total weight of the combined aggregates.
 - .5 The maximum mass of blending sand to be used in the total mix shall not exceed 10% for all mixes.
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 7

**2.2 Mix Design and
Job Mix Formula**

- .1 Contractor Mix Design: The contractor shall use professional engineering services and a qualified testing laboratory to assess the performance grade asphalt cement and aggregate materials proposed for use and to carry out the design of the asphalt mix.
- .2 Requirement for Asphalt Mix Design: the asphalt mix design shall follow the Superpave method of mix design based on 100 gyrations and be in accordance with the latest edition of the Asphalt Institute Publication, Mix Design Methods for Asphalt Concrete Manual Series No.2 (MS-2).
 - .1 The asphalt cement grades shall be PG 58H-28, unless otherwise specified. The optimum percent of asphalt cement shall be that percent which yields design air voids of 4% +/- 1%.
 - .2 The approved asphalt mix design specifying the aggregate blend proportions and the design asphalt cement content shall be considered as the job mix formula.
 - .3 Contracts with SADT (Summer Average Daily Traffic) less than 1,000 shall have a job mix formula asphalt content yielding air voids of 3.5% +/- 1%.
 - .4 If desired, contractor may use up to 20% RAP in the Mix Design (actual percentage to be determined in the mix design).
 - .5 The asphalt mix design data and the proposed job mix formula is to be submitted by the Contractor for review and shall include for each blend the following:
 - .1 The name of the testing firm responsible for the mix design.
 - .2 The specific location(s) of the source of mineral aggregate.
 - .3 The source and type of mineral admixture and the percentage to be used.

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 8

-
- .4 The percentage of aggregate passing each of the specified sieves for each aggregate to be incorporated into the mixture.
 - .5 The proportion of each material (in percent of aggregate) including hydrated lime, if required, as an anti-stripping agent.
 - .6 The composite gradation based on (4) and (5) above.
 - .7 The composite gradation plotted on a 0.45 power graph paper.
 - .8 The results of all aggregate testing, determinations, etc., as defined in Tables 2.1-1, 2.1-2 and 2.1-3, including bulk specific gravity and apparent specific gravity. In addition, aggregates shall be tested to determine if they are prone to stripping (tensile strength ratio <0.8) as well as no visual evidence of stripping. If an anti-stripping additive is required, hydrated lime or an effective liquid anti-stripping agent shall be used.
 - 1. Approved anti-stripping agents shall be as listed in the 2019 NBDTI standard specification.
 - 2. The type and dosage of anti-stripping admixtures shall be noted on the delivery slip.
 - .9 The mix design with a minimum of five (5) different asphalt contents (minimum 0.5 % between each point) with at least one point above and one point below the optimum asphalt percentage that reports the following:
 - .1 The percentage (in units of one tenth of 1%) of asphalt cement to beaded, based on the total weight of the mixture.
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 9

-
- .2 The Superpave test results for the individual and average bulk specific gravity of at least three specimens at each asphalt content.
 - .3 The maximum theoretical specific gravity at each asphalt content.
 - .4 The percent of air voids in the mixture for each asphalt content.
 - .5 The percent voids in mineral aggregate (VMA) at each asphalt content.
 - .6 The percent voids filled with asphalt (VFA) at each asphalt content.
 - .7 The design asphalt content as a percent of total mix.
 - .8 The percent of Theoretical maximum specific gravity for Ninitial, Ndesign, and Nmax at the design asphalt content.
 - 9. The Superpave mix design number of gyrations at Ndesign.
 - 10. The bulk specific gravity briquette weight and height on mm at the design optimum asphalt content.
 - 11. The asphalt binder recommended mixing and compaction temperature.
 - .10 All Superpave mix design characteristics, including graphs used in arriving at the final mix design, the bulk relative density of the combined aggregates and the asphalt absorption of the combined aggregates. If requested, The Contractor shall submit the following with the asphalt mix design for verification purposes:
 - .1 One - 30 kg sample of each representative virgin aggregate.
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 10

.2 Thirty-two 1.2 kg samples of representative virgin aggregate blended to the design mix gradation of the asphalt mix aggregate.

.3 Four Litres of the type of performance grade asphalt cement to be used.

.3 Design Mix Approval: Design mix approval will be based on the design mix tests and the corresponding requirements detailed in Tables 2.2-4 and 2.2-5. The Departmental Representative shall require five (5) working days from the time of receipt of Contractor submitted asphalt mix design and if required, samples to evaluate the asphalt mix design. If require, As part of the asphalt mix design evaluation, the Departmental Representative shall determine the following properties:

- .1 Combined aggregate gradation;
- .2 Bulk specific gravity for the asphalt mix aggregate;
- .3 Superpave density;
- .4 Theoretical maximum specific gravity of the asphalt mix at the design asphalt content and at each asphalt content considered by the Contractor above and below the design asphalt content.
- .5 The difference between the property values submitted by the Contractor and the property values as determined by the Departmental Representative shall not exceed the amounts shown as follows:

Property	Maximum Permissible Variation
Bulk Specific Gravity of Aggregate	± 0.015
Superpave Density	± 12 kg/m ³
Theoretical Maximum Specific Gravity	± 0.010

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Page 11

Table 2.2-4
Superpave Asphalt Concrete Mix Requirements
As per NBDTI Table 261-1

Sieve Size	Passing %	
	B -HRB	D-HRD
25.0 mm	100	-
19.0 mm	84-98	-
16.0 mm	72-94	-
12.5 mm	60-87	100
9.5 mm	51-75	76-98
6.3 mm	41-66	60-84
4.75 mm	34-60	52-70
2.36 mm	22-50	36-65
1.18 mm	12-42	25-55
600 µm	6-32	16-44
300 µm	3-20	8-26
150 µm	2-8	4-12
75 µm	2.0-6.0 (B) 2.0-6.5 (HRB)	2.0-6.0

Table 2.2-5
Physical Requirements for Asphaltic Concrete Mixes

Test	B -HRB	D-HRD
Dust to Binder Ratio	0.6-1.2	0.6-1.2
Tensile Strength Ratio (% min)	80	80
Air Voids (%)	3-5	3-5
Minimum VMA (%)	13.5	15.5
VFA (%)	70-75	70-77

Table 2.2-6
Mix Control Tolerance from Design Mix Formula to Job Mix Formula

Sieve Size	Allowable Variation of % Passing (±)
4.75 mm	3.0
75 µm	0.8
Asphalt Cement	0.3

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 12

.4 Physical Requirements of the Mixture:

- .1 The mixture shall be uniform and shall consist of a mixture of coarse and/or fine aggregate together with any required blend sand, mineral filler or lime, and mixed with asphalt cement.
- .2 The mineral constituents shall be combined in such proportions as to produce a mixture conforming to the gradation requirements of Table 2.2-4. The grading shall not show marked fluctuations from opposite extremes of the limiting sizes.
- .3 Mixtures shall meet the physical requirements of the properties specified in Table 2.2-5. Current NBDTI test procedures will be used to determine these properties.

.5 Mix Control Tolerances:

- .1 Once the job mix formula has been designated by the Department Representative, the Contractor shall be required produce an asphaltic concrete mixture conforming to the mix control tolerance as specified in Table 2.2-6.

.6 Stockpile Requirements:

- .1 Stockpiling sites shall be level, well drained, free of all foreign materials and of adequate bearing capacity to support the mass of the stockpiled materials. Stockpiles shall be either far enough apart or separated by substantial dividers to prevent intermingling.
 - .2 For all aggregates except where stockpiled on Portland cement concrete, asphaltic concrete or on otherwise acceptably stabilized areas, the bottom 150 mm of the stockpile is not to be incorporated into the work.
 - .3 Stockpiles shall be built up in layers not exceeding 1 m in depth. Each layer
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 13

-
- shall be completed over the entire area of the stockpile before beginning the next layer. Coning of the piles or spilling of material over the edges of the pile will not be permitted. Traffic over the stockpile surface shall be limited to that required for adequate levelling or removal.
- .4 The minimum size of each coarse and fine aggregate stockpile shall be 1000 tonnes. The minimum size of the stockpile(s) of blending sand shall be 150 tonnes.
- .5 Before any production of asphaltic concrete mixture has commenced, aggregate stockpiles of the required size and gradation shall be provided at the asphalt plant site. Minimum stockpile requirements shall be maintained throughout the project. Aggregates brought to the site after production has commenced shall be stored in separate stockpiles.
- .6 A minimum of 2 working days between the arrival of asphalt aggregate and its incorporation into the asphaltic concrete mixture will be required to facilitate complete analysis of the aggregate prior to its use.
- .7 Handling, Feeding and Drying of Aggregate:
- .1 Aggregate shall be loaded into the cold feed bins so as to prevent the mixing of separated sizes of aggregate. Mixing of materials on site or loading of more than one material into a single bin shall not be permitted.
- .2 Where the Contractor chooses to use a batch or continuous mix operation, the aggregate shall be dried and heated in the drier and separated by screening into hot storage bins. When the aggregate is delivered to the mixer, it shall be at a temperature consistent
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 14

with proper mixing and laying and shall in no case exceed 165°C. Surfaces of dried aggregate shall be free of carbon or unburnt fuel oil.

- .3 The aggregate shall be sufficiently dried as evidenced by the lack of noticeable steaming, bubbling, or foaming of the asphalt mixture and the absence of visible free water on the tailgate of the truck box.
- .4 If insufficient drying is evident, the Contractor shall take steps as deemed necessary to provide properly dried aggregates.

PART 3 - EXECUTION**3.1 Plant and Mixing
Requirements**

- .1 Location: The hot mix plant shall be located within a 95 km haul distance of the project limits.
- .2 Feeder lines for loading asphalt cement to the asphalt tanks shall be elevated and drained and the use of diesel fuel to clean asphalt cement pump feeder lines is not permitted. When necessary to use diesel to flush lines and pump, all flushed material shall be collected and not permitted to enter asphalt cement tanks or dumped on the ground.
- .3 Batch and Continuous Mixing Plants:
 - .1 To AASHTO M156.
 - .2 Heat asphalt cement and aggregate to mixing temperature as directed by Departmental Representative. Do not heat asphalt cement above 165°. Before mixing, dry aggregates to a moisture content not greater than 0.5% by mass or to a lesser moisture content if required to meet mix design requirements.
 - .3 Make available current asphalt cement viscosity and specific gravity data at

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 15

plant. With information relative to viscosity of asphalt cement being used, Departmental Representative will direct temperature of completed asphalt concrete at plant and at paver after considering hauling and placing conditions.

.4 Feed aggregates from individual stockpiles through separate bins to cold elevator feeders. Aggregate will not be fed directly to the plant from the crusher.

.5 Feed cold aggregates to plant in proportions that will ensure continuous operations.

.6 Immediately after drying, screen aggregates into hot storage bins in sizes to permit recombining into gradation meeting job-mix requirements.

.7 Store hot screened aggregates in a manner to minimize segregation and temperature loss.

.8 Maintain temperature of materials within plus or minus 5°C of specified mix temperature during mixing.

.9 Mixing time:

.1 In batch plants, both dry and wet mixing times as directed by the Departmental Representative. Continue wet mixing as long as necessary to obtain a thoroughly blended asphalt concrete but not less than 30 s or more than 75 s.

.2 In continuous mixing plants, mixing time as directed by the Departmental Representative but not less than 45 s.

.3 Do not alter mixing time unless directed by the Departmental Representative.

.4 Dryer Drum Mixing Plant:

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 16

-
- .1 Feed aggregates to burner end of dryer drum by means of a multi-bin cold feed unit and blend to meet job-mix requirements by adjustments of variable speed feed belts and gates on each bin.
 - .2 Meter total flow of aggregate by an electronic weigh belt system with an indicator that can be monitored by plant operator and which is interlocked with asphalt pump so that proportions of aggregate and asphalt cement entering mixer remain constant.
 - .3 Provide for easy calibration of weighing systems for aggregates without having material enter drum.
 - .4 Make provision for conveniently sampling the full flow of aggregate from the cold feed.
 - .5 Provide screens or other suitable devices to reject oversize particles or lumps of aggregate from cold feed prior to entering drum.
 - .6 Provide a system interlock which will stop all feed components if either asphalt or aggregate from any bin stops flowing.
 - .7 Accomplish heating and mixing of asphalt concrete in an approved parallel flow dryer-mixer in which aggregate and asphalt cement enter drum at burner end and travel parallel to flame and exhaust gas stream. Control heating to prevent fracture of aggregate or excessive oxidation of asphalt cement. Equip system with automatic burner controls and provide for continuous temperature sensing of asphalt concrete at discharge, with a printing recorder that can be monitored by plant operator. Submit printed record of mix temperatures at end of each week.
 - .8 Mixing period and temperature to produce a uniform mixture in which particles are thoroughly coated, and

Hot Mix Asphalt Concrete Paving

Page 17

moisture content of material as it leaves plant to be less than 0.5 %.

- .5 Temporary storage of hot asphalt concrete:
 - .1 Provide storage of sufficient capacity to permit continuous operation and designed to prevent segregation.
 - .2 Do not store in storage bins in excess of 3 h.
- .6 While producing asphalt concrete for this project, do not produce it for other users unless separate storage and pumping facilities are provided for materials supplied to this project.
- .7 Mixing tolerances:
 - .1 Permissible variation in aggregate gradation from job mix (percent of total mass):

Seive, μm	Allowable Variation % Passing (+/-)	
	B -HRB	D-HRD
4750	6.00	6.0
75	1*	1*

*Maximum percent passing 75mm shall be 6.5%

- .2 Permissible variation of asphalt cement from job mix, Type B/HRD,C/HRC,D/HRD: 0.40%.
- .3 Permissible variation of asphalt concrete temperature at discharge from plant, 5°.

3.2 Equipment

- .1 General: All equipment used on this project shall be in top operating condition because the project is located on a roadway with very steep grades and sharp curves.
- .2 Pavers: Mechanical grade controlled self powered pavers capable of spreading asphalt concrete within specified tolerances, true to line, grade and crown indicated.
 - .1 Pavers to be equipped with automatic screed controls, as recommended by

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 18

-
- manufacturer for control of longitudinal grade and transverse slope.
 - .2 Pavers to be equipped with joint matching shoe to operate with longitudinal grade control.
 - .3 Transverse slope control shall be capable of operating from either side of paver.
 - .4 Pavers to be equipped with an approved 12 metre ski. Where such ski is a flexible unit, it shall be equipped with a spring tensioned wire extending between brackets fitted on and slightly above each end of ski. Sensing grid shall ride on wire and not on ski.
 - .3 Rollers: sufficient number of rollers of type and mass to obtain specified density of compacted mix.
 - .4 Vibratory Rollers:
 - .1 Minimum drum diameter: 1200 mm.
 - .2 Maximum amplitude of vibration (machine setting): 500 μ m for lifts less than 40 mm thick.
 - .5 Haul Trucks: of adequate size, speed and condition to ensure orderly and continuous operation and as follows:
 - .1 Boxes with tight metal bottoms.
 - .2 Covers (tarps) of sufficient size and weight to completely cover and protect asphalt concrete when truck fully loaded.
 - .3 In cool weather or for long hauls, insulate entire contact area of each truck box.
 - .4 Trucks which cannot be weighed in a single operation on scales supplied will not be accepted.
 - .5 Truck tailgate assemblies must be such that they do not strike paver hopper when emptying into the hopper.
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 19

-
- .6 Hand Tools:
 - .1 Lutes or rakes with covered teeth for spreading and finishing operations.
 - .2 Tamping irons having mass not less than 12 kg and a bearing area not exceeding 310 cm² for compacting material along curbs, gutters and other structures inaccessible to roller. Mechanical compaction equipment, when approved by the Departmental Representative, may be used instead of tamping irons.
 - .3 Straight edges, 3 metres in length, to test finished surface.

- .7 Material Transfer Vehicle: Transfer asphalt concrete from haul units to spreader with an approved Material Transfer Vehicle, i.e. Roadtec SB 2500 C or approved equal.

3.3 Preparation

- .1 Pavement sites indicated by the Departmental Representative for pulverizing will be prepared in accordance with Section 32 01 16 - Removal of Existing Asphalt.
- .2 Apply tack coat in accordance with Section 32 12 15 - Asphalt Tack Coat prior to paving.
- .3 Pavement sites indicated by the Departmental Representative for overlay and skin patching shall be free of loose and foreign material and tack coat shall be applied in accordance with Section 32 12 15 - Asphalt Tack Coat.

**3.4 Transportation
Asphalt Concrete**

- .1 Transport asphalt concrete to job site in vehicles cleaned of foreign material.
 - .2 Paint or spray truck beds with limewater, soap or detergent solution, at least once a day or as required. Elevate truck bed and thoroughly drain. No excess solution will be permitted. Diesel fuel is not permitted.
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 20

-
- .3 Schedule delivery of asphalt concrete for placing in daylight, unless the Departmental Representative approves artificial light.
 - .4 Deliver asphalt concrete to paver at a uniform rate and in an amount within capacity of paving and compacting equipment.
 - .5 Deliver loads continuously in covered vehicles and immediately spread and compact. Deliver and place asphalt concrete at temperature within range as directed by the Departmental Representative, but not less than 135°.
 - .6 Tarpaulins or other coverings for trucks must be of sufficient mass to prevent rapid cooling of asphalt concrete surface.

3.5 Placing

- .1 Obtain the Departmental Representative's approval of base and existing surface and tack coat and prime coat prior to placing asphalt.
 - .2 Place asphalt concrete to thicknesses, grades and lines as indicated or as directed by the Departmental Representative.
 - .3 Use asphalt material transfer vehicle (MTV) when placing asphalt surface course to transfer hot asphaltic concrete from and unloading truck to the paving insert hopper and remixing the asphalt concrete before it is transferred.
 - .4 Placing Conditions:
 - .1 Place asphalt concrete only when air temperature is above 5°.
 - .2 When temperature of surface on which asphalt concrete is to be placed falls below 10°C, provide extra rollers as necessary to obtain required compaction before cooling.
 - .3 Do not place asphalt concrete when pools of standing water exist on
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 21

surface to be paved, or during rain, or when surface is damp, or if ambient temperature is below 5°C .

- .5 Place asphalt concrete in compacted lifts of thickness as follows:
 - .1 On overlay section in two compacted lifts each with a spread rate of 120 kg/m² or as directed by the Departmental Representative.
 - .6 Spread and strike off asphalt concrete overlay with self-propelled mechanical finisher.
 - .1 Place individual strips no longer than 500 m.
 - .2 Construct longitudinal joints and edges true to line markings. Lines for paver to follow will be established by the Departmental Representative parallel to centreline of proposed pavement. Position and operate paver to follow established line closely.
 - .3 If segregation occurs, immediately suspend spreading operation until cause is determined and corrected.
 - .4 Correct irregularities in alignment left by paver by trimming directly behind machine.
 - .5 Correct irregularities in surface of pavement course directly behind paver. Remove by shovel or lute access asphalt concrete forming high posts. Fill and smooth dips with asphalt concrete.
 - .6 Do not broadcast asphalt concrete over surface.
 - .7 The forward speed of the paver shall be regulated by capacity of the plant and the rollers but shall not exceed a forward speed of 10 m/min.
 - .7 When hand spreading is used:
 - .1 Approved wood or steel forms, rigidly supported to assure correct grade and cross section, may be used. Use
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 22

measuring blocks and intermediate strips to aid in obtaining required cross-section.

- .2 Distribute material uniformly. Do not broadcast material.
- .3 During spreading operation, thoroughly loosen and uniformly distribute asphalt concrete by lutes or covered rakes. Reject asphalt concrete that has formed into lumps and does not break down readily.
- .4 After placing and before rolling, check surface with templates and straightedges and correct irregularities.
- .5 Provide heating equipment to keep hand tools free from asphalt. Avoid high temperatures which may burn asphalt concrete. Do not use tools at a higher temperature than temperature of asphalt concrete being placed.

3.6 Compacting

- .1 Compact asphalt concrete continuously using established rolling pattern.
- .2 Do not change rolling pattern unless asphalt concrete changes or lift thickness changes. Change rolling pattern only as directed by the Departmental Representative.
- .3 General:
 - .1 Provide at least three rollers or as many additional rollers as necessary to achieve specified pavement density.
 - .2 Start rolling operations as soon as asphalt concrete can bear mass of roller without undue displacement of asphalt concrete or cracking of surface.
 - .3 Operate roller slowly initially to avoid displacement of asphalt concrete. For subsequent rolling do not exceed 5 km/h for static steel-wheeled rollers and 8 km/h for pneumatic-tired rollers.

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 23

-
- .4 For lifts 50 mm thick and greater, adjust speed and vibration frequency of vibratory rollers to produce minimum of 20 impacts per metre of travel.
 - .5 Overlap successive passes of roller by at least one half width of roller and vary pass lengths.
 - .6 Keep wheels of roller slightly moistened with water to prevent pick-up of asphalt concrete but do not over-water and do not use diesel fuel.
 - .7 Do not stop vibratory rollers on pavement that is being compacted with vibratory mechanism operating.
 - .8 Do not permit heavy equipment or rollers to stand on finished surface before it has been compacted and has thoroughly cooled.
 - .9 After traverse and longitudinal joints and outside edge have been compacted, start rolling longitudinally at low side and progress to high side.
 - .10 Where rolling causes displacement of asphalt concrete, loosen affected areas at once with lutes or shovels and restore to original grade of loose asphalt concrete before re-rolling.
 - .11 Do not refuel rollers on fresh asphalt concrete.
-
- .4 Breakdown Rolling:
 - .1 Commence breakdown rolling with static steel wheeled roller vibratory roller immediately following rolling of transverse and longitudinal joint and edges.
 - .2 Operate rollers as close to paver as necessary to obtain the specified density without causing undue displacement.
 - .3 Operate breakdown roller with drive roll or wheel nearest finishing machine. Exceptions may be made when working on steep slopes or super-elevated sections.
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 24

.4 Use only experienced roller operators for this work.

.5 Second Rolling:

.1 Use pneumatic-tired, steel wheel or vibratory rollers and follow breakdown rolling as closely as possible and while paving asphalt concrete temperature allows maximum density from this operation.

.2 Rolling shall be continuous after initial rolling until asphalt concrete placed has been thoroughly compacted.

.6 Dusting: If required by the Departmental Representative, dust entire area of sheet asphalt concrete with hydrated lime immediately after rolling to eliminate tendency to pick-up under traffic.

.7 All asphalt concrete shall be compacted to 92.5% of Theoretical Maximum Relative Density (TMRD) in accordance with NBDTI asphalt concrete quality assurance technician certification manual procedures.

.8 The Contractor will supply additional compaction equipment if required density is not achieved.

.9 Gutters will be compacted with vibratory compactors which operate perpendicular to the direction of the gutter.

3.7 Joints

.1 General:

.1 Trim vertical face to provide true surface and cross section against which new pavement may be laid. Remove loose particles.

.2 Paint joint face with coat of tack coat emulsified asphalt cement or preheat joint face with approved heater, prior to placing of fresh asphalt concrete.

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 25

-
- .3 Overlap previously laid strip with spreader by 100 mm.
 - .4 Rake fresh asphalt concrete against joint and thoroughly tamp and roll.
 - .5 Remove surplus material from surface of previously laid strip. Dispose of surplus material as directed by the Departmental Representative.
 - .6 Do not throw surplus material on freshly screened mat surface.
- .2 Transverse Joints:
- .1 Carefully construct and thoroughly compact transverse joints to provide a smooth riding surface.
 - .2 Hold transverse joints to a minimum. When paving single width and maintaining traffic, construct one lane no farther than one-half total paving day.
 - .3 Stagger joint locations 1.5 to 3.0 metres. Schedule each day's paving operation to terminate adjacent lanes in any one area to within above specified joint location.
 - .4 Offset transverse joint in succeeding course by at least 600 mm.
- .3 Longitudinal Joints:
- .1 Before rolling, carefully remove with a lute or rake and discard coarse aggregate in asphalt concrete overlapping joint.
 - .2 Roll longitudinal joints directly behind paving operation.
 - .3 When rolling with static roller, shift roller over onto previously placed lane in order that no more than 150 mm of roll rides on edge of newly laid lane, then operate roller to pinch and press fines gradually across joint. Continue rolling until a thoroughly compacted neat joint is obtained.
 - .4 When rolling with vibratory roller, have most of drum width ride on newly
-

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Hot Mix Asphalt Concrete Paving

Page 26

placed lane with remaining 100 to 150 mm extending onto previously placed and compacted lane.

- .5 When abutting lane is not placed in same day, or when joint is distorted during day's work by traffic or other means, carefully trim edge of lane to line and paint with a thin coating of asphalt before abutting lane is placed.
- .6 Ensure joints are offset at least 150 to 200 mm from those in lower layers.

3.8 Finishing Tolerances

- .1 Finished asphalt concrete to be within 6 mm of design elevation but not uniformly high or low.
- .2 Finished asphalt concrete not to have irregularities exceeding 6 mm when checked with a 3 metre straight edge placed in any direction.

3.9 Temporary Markings

- .1 The Contractor will place temporary pavement markings before sunset following each day's work. Marking material will be approved by the Departmental Representative.

3.10 Defective Work

- .1 Repair areas showing checking or hairline cracking to the approval of the *Departmental Representative*.
 - .2 Correct irregularities which develop before completion of rolling by loosening surface mix and removing or adding material as required. If irregularities or defects remain after final compaction, remove surface course promptly and lay new material to form a true and even surface and compact immediately to specified density.
 - .3 Adjust roller operation and screed settings on paver to prevent further defects such as rippling and checking of pavement.
-

Pavement Markings

Page 1

PART 1 - GENERAL1.1 General

- .1 This standard applies to low temperature, water-borne, acrylic, fast-drying traffic paints suitable for spray application with specialised equipment, to asphalt surfaces. Includes are centre lines to match existing layout (double solid, solid/dash or single dash lines), as well as all intersections, arrows, delineation, special marking and temporary markings, etc. for the full length of the work area.
- .2 This specification includes a compound to be used as an additive in conjunction with water-borne traffic paint and glass spheres to provide a drying agent which accelerates the no-tack time of the water-borne traffic paint. No-tack time is to be increased by approximately 40% over the same paint without the compound.
- .3 All pavement markings to be in accordance with the Manual of Uniform Traffic Devices for Canada, latest edition.

1.2 Reference Standards

- .1 American Society for Testing and Materials (ASTM).
 - .1 ASTM D 711, Test Method for No-Pick-Up Time of Traffic Paint.

does not meet specification, will not be permitted to be used on this project.

PART 2 - PRODUCTS2.1 Materials

.1 General Requirements:

- .1 The low temperature, water-borne (acrylic), lead free, fast drying traffic paints shall be designed to be applied in environmental conditions such that operational temperatures shall be in the range of 2 degrees Celsius and rising.
- .2 Paint shall be well ground to a uniform smooth consistency and shall be free from skin, dirt and other foreign particles. The paint shall be capable of being sprayed at the temperature intended for the paint. It shall flow evenly and smoothly and cover solidly when applied to pavement. The paint shall be supplied ready-mixed for use without any addition of water.
- .3 The paint mixture shall include the glass bead intermix system.
- .4 The paint mixture is to be able to be applied under pneumatic pressure by a standard truck mounted dispensing machine moving at speeds of 8 to 25 km/hr.

2.2 Paint

- .1 Paint to this standard shall comply with the following detail requirements when tested in accordance with the specified test methods:

Property	Specification		Test Method
	Min	Max	
Density	--	--	Method 2.1
Consistency, KU (2)	85	95	Method 4.5
Skinning Properties (3)	0	0	Method 10.1
Contrast Ratio (5)	0.992	--

.2 All tests to be performed by methods as per
Canadian General Standards Board (CGSB), 1-

Marshalling Yard Improvements

Saint John Ferry Terminal

Saint John, New Brunswick

Project No. R.090690.001

Pavement Markings

Page 5

GP-71 or American Society of Testing and Materials (ASTM) or as noted herein.

- .3 Kreb units at 25°C.
- .4 Paint shall be non-skinning (See General Requirements, 2.1.1.2).
- .5 Perform field tests on a 15 mil wet film thickness of hot spray (maximum 50°C). Wait one minute, drive a passenger vehicles over the film and ensure no visible (from 15 m) deposition of paint is deposited onto the adjacent pavement.
- .6 Volatile organic compounds (VOC) (excluding water): max 150 g/L; method ASTM D3960.
- .7 Titanium dioxide pigment shall be Rutile type and have a minimum TiO₂ content of 93%.
- .8 Non-tracking time based upon 375 µm (15 mils) wet film thickness applied when pavement temperature is greater than 10°C and humidity conditions of 80% or less on dry pavement.

2.3 Glass Bead Intermix System

- .1 The compound shall be a mixture of glass beads and drying agent materials.
- .2 The compound shall meet the following gradation when tested according to ASTM D1214:

ASTM SIEVE SIZE		% PASSING
0.850	mm	100
0.600	mm	80 - 100
0.300	mm	20 - 35
0.150	mm	0 - 8
0.075	mm	0 - 2

- .3 The glass bead component of the compound shall be colourless, clean, transparent, and

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Pavement Markings

Page 6

free from milkiness and excessive air bubbles. They shall be spherical in shape, containing no more than 25% irregularly shaped particles and be the equivalent of an ASHTO Type I glass bead. The silica content of the glass spheres shall not be less than 60% as per ASTM C169 testing. The component shall be manufactured of glass of a composition designed to be highly resistance to traffic wear, decomposition, etching under atmospheric conditions, dilute acids, alkalids, paint film constitutes, and to the effect of weathering, and should be composed of recycled glass (to the maximum extent possible).

- .4 The drying agent component shall be smooth and spherically shaped, amber to white in colour, and of a type that promotes accelerated coalescence of the latex polymer and as such reduces water-borne paint dry to touch time by approximately 40% minimum.
- .5 The compound shall show no tendency to absorb moisture in storage and shall remain free of clusters and hard lumps. It shall flow freely from dispensing equipment at any time when applying with pavement marking.

PART 3 - EXECUTION3.1 Equipment

- .1 Paint applicator to be an approved pressure type mobile distributor capable of applying paint in single, double and dashed lines. Applicator to be capable of applying marking components uniformly, at rates specified, and to dimensions as indicted, and to have positive shut-off.

3.2 Condition of Surfaces

- .1 Surface to be dry, free from ponded water, frost, ice, dust, oil, grease and other foreign materials.

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Pavement Markings

-
- | | | |
|---|----|--|
| 3.3 <u>Traffic Control</u> | .1 | Traffic control to be in accordance with Section 01 55 26 - Traffic Regulation. |
|
 | | |
| 3.4 <u>Application</u> | .1 | Unless otherwise approved by <i>Departmental Representative</i> , apply paint only when air temperature is above 10°C, wind speed is less than 60 km/hr and no rain is forecast within next 4 h. |
| | .2 | Apply traffic paint evenly at rate of 3 m/L. |
| | .3 | Do not thin paint unless approved by <i>Departmental Representative</i> . |
| | .4 | Symbols to conform to dimensions indicated. |
| | .5 | Thoroughly clean distributor tanks before refilling with paint to different colour. |
|
 | | |
| 3.5 <u>Tolerance</u> | .1 | Paint markings to be within plus or minus 12 mm of dimensions indicated. |
| | .2 | Remove incorrect markings to approval of <i>Departmental Representative</i> . |
|
 | | |
| 3.6 <u>Protection of Completed Work</u> | .1 | Protect pavement markings until dry. |

Packaged Lift Station, Wet Well Type

Page 1

PART 1 - GENERAL1.1 Description

- .1 The work under this section will include the supply and installation of a new sanitary lift station, a new precast concrete wet well, pumps and piping, electrical connection to terminal panel and related appurtenances will be installed. Electrical lines will be run in appropriately sized PVC conduit with an additional redundant conduit for future use. A cast-in-place concrete slab around the new cover will be poured and a pre-fabricated fiberglass enclosure with interior partition will be installed to house valves, electrical and control panels for the new sanitary lift station.

Submittals

- .1 Submit in accordance with Section 01 78 00 - Closeout Submittals.
- .2 Operation and Maintenance Data:
submit operation and maintenance data for lift station components for incorporation into manual.
- .3 Include information as follows:
 - .1 Record drawings, wiring diagrams, electrical schematics of equipment as installed.
 - .2 Interconnections with numbers and wire sizes.
 - .3 Certified pump characteristic curves.
 - .4 Detailed operation and maintenance instructions.
 - .5 Parts list comprising complete schedule clearly identified to facilitate re-ordering.

1.6 Delivery, Storage
and Handling

- .1 Deliver, store and handle materials in accordance with Section 01 61 00 - Material and Equipment and with manufacturer's written instructions.
- .2 Delivery and Acceptance Requirements:
deliver materials to site in original factory packaging, labelled with manufacturer's name and address.
- .3 Storage and Handling Requirements:
 - .1 Store materials off ground and in accordance with manufacturer's recommendations.
 - .2 Store and protect all equipment from nicks, scratches, and blemishes.
 - .3 Replace defective or damaged materials with new.

PART 2 - Products2.1 Description

- .1 Reinforced precast concrete lift station.
 - .1 Pumping system: factory assembled and disassembled for shipment with mating components clearly identified.
 - .2 Principal items of equipment to include 2 identical submersible sewage pumping units, internal piping and valves, flow meter, liquid level controls, lifting chains, guide bars, vents complete with screens, cover, hatches, electrical panel, electrical wiring, control panel with circuit breakers and motor starters.
- .2 Equipment and installation including as follows:
 - .1 Excavation for lift station and slab.
 - .2 Placement of slab and rebar.
 - .3 Connection of power to control panel as indicated.
 - .4 Connections to gravity sanitary sewer main, overflow piping and force mains.
 - .5 Supply and installation of packaged lift station in accordance with manufacturer's recommendations.

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Packaged Lift Station, Wet Well Type

Page 6

- .3 Wet well lift station:
 - .1 Fully automatic, consisting of duplex submersible pumps mounted on rail system.
 - .1 Ensure control is by series of liquid level bulbs.
 - .2 Ensure pumps alternate as lead pump on each cycle.
 - .3 Incorporate time delay relays in control circuits to allow continuation of pump for pre-set time after normal pump shut down signal is received.
 - .4 Operate both pumps when lag pump "on" water level is reached in wet well.
 - .1 Ensure lag pump shuts off when water level drops to pump "off" water level.
 - .5 Locate control system in control panel mounted in pre-fabricated fiberglass enclosure.

- 2.2 Wet Well Structure
 - .1 Structure : leak free, precast reinforced concrete with access opening[s], and designed for following forces:
 - .1 Dead load of station and components, dynamic and kinetic forces of rotating equipment.
 - .2 Hydrostatic uplift forces.
 - .3 Horizontal earth loading and full hydrostatic pressure assuming water at ground elevation 10.1 m.
 - .2 Waterproof exterior surfaces below grade in accordance with Section 07 52 00 - Modified Bituminous Membrane Roofing.

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Packaged Lift Station, Wet Well Type

Page 7

.3 Materials:

- .1 Precast concrete to ASTM C 478M and CAN/CSA-A257.
- .2 Cast-in-place concrete in accordance with Section 03 30 00 - Cast-in-Place Concrete.

.4 Access hatches to be sufficiently sized for pump removal.

.5 Precast sections to be strapped together to prevent separation.

2.3 Pumps

.1 2 vertical, explosion proof, grinder, single stage, bottom suction, totally submersible, centrifugal pumps, direct connected to motor by solid stainless steel shaft.

.2 Characteristics:

- .1 Capacity: 1.0 L/s
- .2 Total dynamic head: 6.1 m

.3 Volute casing: Material to be suitable for use in salt water.

2.4 Pump Lifting Station

.1 Ensure pumps are complete with sliding guide and brackets, chains and quick leak-proof disconnect to discharge piping, all allowing for withdrawal of pumps.

.2 Include stainless steel cable for each pump accessible from roof access hatches.

Page 8

2.5 Submersible Motors

- .1 Motors:
 - .1 Three (3) Phase
 - .2 600 Volt
 - .3 Fully overload protected.
 - .4 Assembly capable of operating continuously in air without overheating.
 - .5 Complete with NEMA approved winding temperature sensor.
 - .6 Submersible motor: Material suitable for use in sea water, completely water tight.
- .2 Motor enclosure and seal housing: corrosion resistant, completely watertight, cast iron.
- .3 Terminal box: watertight, with waterproof cable entry glands mounted at motor.
- .4 Motor leads and power cords to be sealed and locked in place using strain bushings. All cables to be waterproof.

2.6 Pump Control System

- .1 Liquid level switches: shock-proof mercury switches enclosed in leak-proof polypropylene body.
- .2 Include independently adjustable control levels as follows:
 - .1 Lead pump start level
 - .2 Lead pump stop level
 - .3 Lag pump start level
 - .4 Lag pump stop level
 - .5 High water alarm
- .3 Ensure lead pump and lag pump controls include alternator relay to provide automatic pump alteration for each pumping cycle when pump sequence selection switch is on automatic.

Packaged Lift Station, Wet Well Type

Page 9

2.7 Piping and Valves

- .1 Ductile iron pipe, fittings and joints: 75 mm minimum, cement lined.
- .2 Gate valves: solid wedge, Class 125, flanged, to ANSI/AWWA C500.
- .3 Check valves: Class 125, swing check type, spring loaded level, stainless steel shaft, to ANSI/AWWA C508.
- .4 Valves to be epoxy coated.

2.8 Electrical Control
Panel and Wiring

- .1 Use only CSA approved components.
- .2 Electrical equipment in station in accordance with requirements for non-Hazardous Locations, Class 1, Group D, Division 2.
- .3 Panel enclosure of fabricated steel suitably braced, double door equipped with locking device, suitable for wall mount.
- .4 Ensure panel is complete with required components including:
 - .1 1 main circuit breaker with thermal magnetic trip and suitable current rating for station load.
 - .2 1 ground detector, neon lamp type with resistors and fuse cut-outs.
 - .3 1 motor circuit interrupter with toggle handle for each pump motor with adjustable instantaneous trip.
 - .4 1 magnetic full voltage starter with overload relays for each pump.
 - .5 1 time delay-relay, 2-50 second range, to prevent concurrent starting of pumps after power restoration.
 - .6 Dry contacts, normally open, on high water alarm relay for remote indication.

Page 10

-
- .5 Mount following switches and instrumentation on door of panel:
 - .1 Pump mode selector switches for hands- off-automatic operation of each pump.
 - .2 Pump sequence selector switch to permit override of automatic pump alternation and selection of either pump to run as lead pump.
 - .3 1 high level alarm complete with alarm relay and red light on panel door.
 - .6 Terminals in circuit of start float switch of lag pump.
 - .7 Ground connection lug.
 - .8 Labels: all components on and inside panel to indicate operating routine.
 - .1 Labels: anodized aluminum with 5 mm minimum letters.
 - .9 Schematic wiring diagram: mounted inside panel door, varnish protected.
 - .10 Conductors: copper
 - .11 Control wiring: number 14 AWG minimum, stranded type TEW.
 - .12 Power wire: number 12 AWG minimum, type RW 90.
 - .13 Wire:
 - .1 Numbered with printed permanent indelible identifying plastic tapes to correspond to schematic diagram.
 - .2 Terminated for external control connections by tubular screw type terminal blocks with barrier and labels.
-

Page 11

- .3 Equipped with grommet and shields for mechanical protection.
- .4 Adequately supported and installed in accordance with written approval of Departmental Representative.
- .5 Run through appropriately sized PVC conduit with a redundant conduit for future use.

2.9 Package System

- .1 Precast concrete enclosure complete with components specified.
- .2 The items listed below shall be supplied with the wet well to serve as back up parts for the operator:
 - .1 Spare pump
 - .2 Spare impeller
 - .3 Wear ring
 - .4 Service kit containing all the parts needed to perform a regular service on the pump, such as; new bearings, seals, o-rings, lubricants, etc

2.10 Source Quality Control

- .1 Perform operational tests on pumps at factory to check for excessive vibration, for leaks in piping or seals and for correct operation of automatic control system and auxiliary equipment. Pump suction and discharge lines to be coupled to reservoir and pumps to recirculate water for minimum of 1 hour under simulated service conditions.
- .2 Provide certification that pumps and controls have been factory tested and deficiencies rectified prior to delivery to site.

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Packaged Lift Station, Wet Well Type

Page 12

2.11 Pre-fabricated
Fiberglass Enclosure

- .1 Pre-engineered fiberglass enclosure rated for loading to be encountered in Saint John, New Brunswick.
- .2 2.44 m x 2.44 m x 1.8 m minimum height.
- .3 Flanged to mount to concrete slab.
- .4 Walls will have R-12 minimum.
- .5 Internal partition wall; dry and wet sides.
- .6 Double hung doors on each end, complete with ½" padlock loop and 3 point latch.
- .7 Wet side to have louvres for vents.
- .8 Internal lighting in each side.
- .9 External light over each entrance.
- .10 Heater mounted in each side, complete with thermostat.
- .11 Equipment mounting channels on interior partition walls.

2.12 PVC Electrical
Conduite

- .1 Rigid PVC duct and conduit for exterior underground electrical cabling, size as indicated to CSA C22.2, with moulded fitting and minimum wall thickness at any point of 2.8 mm. Nominal length: 3m plus or minus 12mm.
- .2 Rigid PVC bends, couplings, reducers, bell end fittings, plugs, caps, adaptors same product material as duct, to make complete installation.

Page 13

Part 3 - Execution3.1 Examination

- .1 Verification of Conditions: verify that conditions of substrate previously installed under other Sections or Contracts are acceptable for lift station installation in accordance with manufacturer's written instructions.
- .1 Visually inspect substrate in presence of Departmental Representative.
- .2 Inform Departmental Representative of unacceptable conditions immediately upon discovery.
- .3 Proceed with installation only after unacceptable conditions have been remedied and after receipt of written approval to proceed from Departmental Representative.

3.2 Excavation,
Backfilling and
Compaction

- .1 Excavate, backfill and compact in accordance with Section 31 23 33 - Excavating, Trenching and Backfilling.

3.3 Concrete

- .1 Lift station to be precast concrete.

3.4 Equipment
Installation

- .1 Install equipment, piping and controls in accordance with manufacturer's recommendations.

3.5 Waterproofing

- .1 Waterproof in accordance with City of Saint John standard specifications.

Marshalling Yard Improvements**Saint John Ferry Terminal****Saint John, New Brunswick****Project No. R.090690.001**

Packaged Lift Station, Wet Well Type

Page 14

3.6 Field Quality Control

- .1 After completion of installation, demonstrate functional operation of systems, including sequence of operation, to approval of Departmental Representative.
- .2 Test in presence of Departmental Representative and representative from equipment supplier.
- .3 Provide labor and ancillary equipment necessary to fulfill tests.
- .4 Test to demonstrate that:
 - .1 Pumps and equipment run free from heating or vibration.
 - .2 Operation meets requirements of these specifications.
 - .3 Pumps and pumping are free and clear of debris and obstructions.
- .5 Replace equipment found defective.
 - .1 Repeat test until equipment is accepted by Departmental Representative.

3.7 Demonstration

- .1 Operating Personnel Training
 - .1 Provide on-site training by qualified personnel for designated operating personnel prior to final commissioning.
 - .1 Schedule and deliver training in accordance with training plan approved in writing by Departmental Representative.

Packaged Lift Station, Wet Well Type

Page 15

3.8 Cleaning

- .2 Include training for 3 designated personnel on routine maintenance procedures, minor repairs, replacement of parts, including disassembly of major components.
- .3 Include safety precaution procedures for systems.
- .1 Progress Cleaning: clean in accordance with Section 01 74 11 - Cleaning.
 - .1 Leave Work area clean at end of each day.
- .2 Final Cleaning: upon completion remove surplus materials, rubbish, tools and equipment in accordance with Section 01 74 11 - Cleaning.
- .3 Waste Management: separate waste materials for reuse and recycling in accordance with Section 01 74 22 - Construction/Demolition Waste Management and Disposal.
 - .1 Remove recycling containers and bins from site and dispose of materials at appropriate facility.
