- 3. The selection will be based on the highest responsive combined rating of technical merit and price. The ratio will be 70 % for the technical merit and 30 % for the price.
- 4. To establish the technical merit score, the overall technical score for each responsive bid will be determined as follows: total number of points obtained / maximum number of points available multiplied by the ratio of 70 %.
- 5. To establish the pricing score, each responsive bid will be prorated against the lowest evaluated price and the ratio of 30 %.
- 6. For each responsive bid, the technical merit score and the pricing score will be added to determine its combined rating.

ANNEX "A"

STATEMENT OF WORK

Background:

The Canada Energy Regulator (CER) requires the services of a suite of qualified engineering resources, primarily in the area of pipeline integrity management, to assist the Pipeline Integrity team during peak work-load situations.

Objective:

Qualified engineering resources will be available to the CER to conduct analyses, studies or investigations of assigned pipeline and pipeline integrity-related topics. This will enable the CER to meet expected timelines for application assessment, incident investigations, compliance verification or other technical regulatory topics during peak work-load periods or when the CER does not have the requisite technical expertise inhouse.

Scope of work:

The CER anticipates the need for the provision of pipeline engineering services on a temporary basis, primarily in the area of pipeline integrity management, during peak work-load situations over the 2020-2021 fiscal year (with the option to extend twice for a period of one year). Personnel required would be from a variety of skill and experience levels, ranging from engineers-in-training to senior specialists or experts.

The selected contractor(s) would provide expert advice to the CER with respect to engineering matters related to the design, construction, operation and abandonment of pipelines under the jurisdiction of the CER. The contractor would assess technical information provided by hydrocarbon pipeline operators with respect to compliance with the requirements of the:

- I. CER Act,
- II. Onshore Pipeline Regulations and
- III. CSA Z662.

Resources provided by the contractor must be able to deliver services specified in a task authorization for tasks, which may include but not be limited to the following:

- i. Review of Engineering Assessments (per CSA Z662 requirements) filed to support (but not limited to) pipeline fitness for service, return to service requests or class location changes
- ii. Pipeline integrity-related incident investigation and analysis
- iii. Review of company filings for compliance and technical adequacy (including geotechnical design, process design, metallurgy, pipeline integrity management, civil structures, welding/joining programs)
- iv. Review of applications for construction of new pipelines and associated facilities
- v. Review of leave to open applications for new pipelines and associated facilities
- vi. Providing expert input into a variety of regulatory projects
- vii. Presenting the results of the above-noted tasks to the CER

The CER recognizes that a single entity may not be able to provide all the specified services. For this reason more than one contract may be awarded.

Bid Solicitation # 84084-20-0013 Engineering Services

Deliverables:

Each individual task would be initiated via a task authorization (TA) form. Each TA would specify the deliverables for that task and the expected timelines. Deliverables would be in the form specified in the respective TA, but would normally be in the form of a written report providing analysis and advice.
