

The following changes in the bid documents are effective immediately. This addendum will form part of the contract documents.

Section 02 61 00.01 – Soil Remediation

Part 3

3.5 .5.4 Add to the section the following:

The fuselage is comprised of five steel tanks, one larger tank at the nose of the mockup, three tanks, each of a similar size, which make up the remainder of the body of the mock up, and one tank cut approximately in half horizontally, with each half comprising a wing of the mock up. Each of the tanks also has a top hatch or small addition on top of the tank and there are also some minor items inside some of the tanks such as chairs and tables, etc. Solid materials inside the fuselage shall be either recycled (if appropriate), in the same manners as the fuselage, or, disposed as hazardous waste.

The larger tank at the nose of the mock up is approximately 3.1 m in diameter, approximately 18.25 m long and has a wall thickness of approximately 20 mm.

The three tanks which comprise the remainder of the body of the mock up are each approximately 2.0 m in diameter, approximately 8.5 m long, and have a wall thickness of approximately 10 mm.

The wings are each approximately one half of a tank which, if whole, would have the same diameter (approximately 2.0 m) and thickness (approximately 10 mm) as the three tanks identified above, but the length of the wings are approximately 7.5 m.
