	GENERAL INSTRUC	TIONS	Section	01	10	10
Electrical Installation Summerford, NL 723249			Page 1 2020-04-			

The work consists of the furnishing of all 1.1 SCOPE .1 plant, labour, equipment and material for electrical installation at Summerford, NL, in strict accordance with specifications and accompanying drawings and subject to all terms and conditions of the Contract. .2 Note that the Contractor must incorporate COVID-19 standardized protocols in their site specific Health and Safety Plan. The protocols are to include: .1 Prevention (signage, practices to reduce risk of transmission, encouragement of social distancing, use of PPE, use of individual modes of transportation, monitoring status of workers, construction jobsite and trailer cleaning protocols, etc.). .2 Detection (screening at entry of construction site, unauthorized entry points, etc.). .3 Response measures (shut down

procedures, individual case handling, etc.)

1.2 DESCRIPTION OF WORK

.1 In general, work under this contract will consist of, but will not necessarily be limited to, the following:

.1 Supply and installation of new Class "A" granulars and asphalt paving, in the area noted on the drawing. Note that there are strict property lines at this site and private property outside these lines cannot be encroached upon. Carry costs of survey company to layout property limits prior to construction.

.2 Demolition and removal of various electrical components, as noted on the drawings.

.3 Supply and installation of new

Electrical Installation Summerford, NL 723249

electrical systems (poles, pedestals, wiring, panel, etc.), as noted on the drawings, for a fully functional system. .4 Modifications to the existing building to accommodate the new electrical panel, as noted on the

<u>1.3 SITE OF WORK</u> .1 Work will be carried out at Summerford, NL, in the location as shown on the accompanying drawings.

drawings.

- 1.4 DATUM .1 Datum used for this project is Lowest Normal Tides (LNT) which is assumed to be 2.521m below bench mark PWC 2-2007. Confirm the benchmark is accurate and not damaged, before proceeding with work. If required, establish a new bench mark to the approval of the Departmental Representative.
 - .2 Bidders are advised to consult the Tide Tables issued by Fisheries and Oceans in order to make sure of the tidal conditions affecting work.
- 1.5 FAMILIARIZATION Before submitting a bid, it is recommended .1 that bidders visit the site and its WITH SITE surroundings to review and verify the form, nature and extent of the work, materials needed for the completion of the work, the means of access to the site, severity, exposure and uncertainty of weather, soil conditions, any accommodations they may require, and in general shall obtain all necessary information as to risks, contingencies and other circumstances which may influence or affect their bid or costs to do the work. No allowance shall be made subsequently in this connection on account of error or negligence to properly observe and

construct work.

- .4 Supply such devices as straight edges and templates required to facilitate Departmental Representative's inspection of work.
- .5 Supply stakes and other survey markers required for laying out work.
- <u>1.9 COST BREAKDOWN</u> .1 Before submitting first progress claim submit breakdown of Contract price in detail as directed by Departmental Representative and aggregating contract price.
 - .2 Provide cost breakdown in same format as the numerical and subject title system used in this specification project manual and thereafter sub-divided into major work components as directed by Departmental Representative.
 - .3 Upon approval by Departmental Representative, cost breakdown will be used as basis for progress payment.
 - .4 All work items not designated in the unit price table as a measurement for payment, are to be included in the lump sum arrangement, as noted on the Bid and Acceptance Form.
- 1.10 WORK SCHEDULE .1 Submit within 7 work days of notification of acceptance of bid, a construction schedule showing commencement and completion of all work within the time stated on the Bid and Acceptance Form and the date stated in the bid acceptance letter.
 - .2 Provide sufficient details in schedule to clearly illustrate entire implementation plan, depicting efficient coordination of

	GENERAL	INSTRUCTIONS	Section	01 10	10
Electrical Installation Summerford, NL 723249			Page 5 2020-04-	26	
143443			2020-04-	20	

tasks and resources, to achieve completion of work on time and permit effective monitoring of work progress in relation to established milestones.

- .3 As a minimum, work schedule to be prepared and submitted in the form of Bar (GANTT) Charts, indicating work activities, tasks and other project elements, their anticipated durations and planned dates for achieving key activities and major project milestones provided in sufficient details and supported by narratives to demonstrate a reasonable plan for completion of project within designated time. Generally Bar Charts derived from commercially available computerized project management system are preferred but not mandatory.
- Submit schedule updates on a minimum .4 monthly basis and more often, when requested by Departmental Representative, due to frequent changing project conditions. Provide a narrative explanation of necessary changes and schedule revisions at each update.
- .5 The schedule, including all updates, shall be to Departmental Representative's approval. Take necessary measures to complete work within approved time. Do not change schedule without Departmental Representative's approval.
- .6 All work on the project will be completed within the time indicated on the Bid and Acceptance Form.
- Following abbreviations of standard 1.11 ABBREVIATIONS .1 specifications have been used in this specification and on the drawings:

GENERAL INSTRUCTIONS

Electrical Installation	
Summerford, NL	Page 6
723249	2020-04-26

CGSB - Canadian Government Specifications Board CSA - Canadian Standards Association NLGA - National Lumber Grades Authority - American Society for Testing and ASTM Materials

.2 Where these abbreviations and standards are used in this project, latest edition in effect on date of bid call will be considered applicable.

1.12 QUARRY AND .1 Make own arrangements with Provincial authorities and owners of private EXPLOSIVES properties, for the quarrying and transportation of rock and all materials and machinery necessary for work over their property, roads or streets as case may be.

- .1 Arrange for sufficient space adjacent to OPERATIONS project site for conduct of operations, storage of materials and so on. Exercise care so as not to obstruct or damage public or private property in area. Do not interfere with normal day-to-day operations in progress at site. All arrangements for space and access will be made by Contractor.
 - Remove snow and ice as required to .2 maintain safe access in a manner that does not damage existing structures or interfere with the operations of others.
 - Departmental Representative will arrange .1 project meetings and assume responsibility for setting times and recording minutes.
 - .2 Project meetings will take place on site of work unless so directed by the
- 1.14 PROJECT MEETINGS

Departmental Representative.

- .3 Departmental Representative will assume responsibility for recording minutes of meetings and forwarding copies to all parties present at the meetings.
- .4 Have a responsible member of firm present at all project meetings.
- <u>1.15 PROTECTION</u> .1 Store all materials and equipment to be incorporated into work to prevent damage by any means.
 - .2 Repair or replace all materials or equipment damaged in transit or storage to the satisfaction of Departmental Representative and at no cost to Canada.
 - .1 Where work involves breaking into or connecting to existing services, carry out work at times directed by governing authorities, with minimum of disturbance to site operations, pedestrian, vehicular traffic and tenant operations.
 - .2 Before commencing work, establish location and extent of service lines in area of work and notify Departmental Representative of findings.
 - .3 Submit schedule to and obtain approval from Departmental Representative for any shut-down or closure of active service or facility. This includes disconnection of electrical power and communication services to tenant's operational areas. Adhere to approved schedule and provide notice to affected parties.
 - .4 Provide temporary services when directed by Departmental Representative to maintain

1.16 EXISTING SERVICES

GENERAL INSTRUCTIONS

Section 01 10 10

Electrical Installation	
Summerford, NL	Page 8

critical facility systems.

- .5 Provide adequate bridging over trenches which cross walkways or roads to permit normal traffic.
- .6 Where unknown services are encountered, immediately advise Departmental Representative and confirm findings in writing.
- .7 Protect, relocate or maintain existing active services as required. When inactive services are encountered, cap off in manner approved by authorities having jurisdiction over service. Record locations of maintained, re-routed and abandoned service lines.
- .1 Maintain at job site, one copy each of the following:
 - .1 Contract Drawings
 - .2 Specifications
 - .3 Addenda
 - .4 Reviewed Shop Drawings
 - .5 List of outstanding shop drawings
 - .6 Change Orders
 - .7 Other modifications to Contract
 - .8 Field Test Reports
 - .9 Copy of Approved Work Schedule
 - .10 Site specific Health and Safety Plan
 - and other safety related documents .11 Other documents as stipulated

elsewhere in the Contract Documents.

- 1.18 PERMITS
- .1 Obtain and pay for all permits, certificates and licenses as required by Municipal, Provincial, Federal and other Authorities.
- .2 Provide appropriate notifications of project to municipal and provincial

1.17 DOCUMENTS REQUIRED

Electrical	Installation
Summerford,	NL
723249	

inspection authorities.

- .3 Obtain compliance certificates as prescribed by legislative and regulatory provisions of municipal, provincial and federal authorities as applicable to the performance of work.
- .4 Submit to Departmental Representative, copy of application submissions and approval documents received for above referenced authorities.
- .5 Submit to Departmental Representative, copy of quarry permit, if applicable, prior to start of quarry operations.
- .6 Comply with all requirements, recommendations and advice by all regulatory authorities unless otherwise agreed in writing by Departmental Representative. Make requests for such deviations to these requirements sufficiently in advance of related work.
- .1 Execute cutting, including excavation, fitting and patching required to make work fit properly.
 - .2 Where new work connects with existing and where existing work is altered, cut, patch and make good to match existing work. This includes patching of openings in existing work resulting from removal of existing services.
 - .3 Do not cut, bore, or sleeve load-bearing members.
 - .4 Make cuts with clean, true, smooth edges. Make patches inconspicuous in final assembly.

1.19 CUTTING, FITTING AND PATCHING

Electrical Installation	
Summerford, NL	Page 10
723249	2020-04-26

1.20 EXISTING SUB- .1 Information pertaining to the existing <u>SURFACE CONDITIONS</u> .1 Information pertaining to the existing sub-surface conditions may be available by contacting the Departmental Representative.

- .2 Contractors are cautioned that any previous investigations that may be available for review, were intended to provide general site information only. Any interpolation and/or assumptions made relative to any previous investigations is the Contractor's responsibility.
- 1.21 LOCATION OF .1 Location of work shown or specified shall <u>EQUIPMENT</u> .1 Location of work shown or specified shall be considered as approximate. Actual location shall be as required to suit conditions at time of installation and as is reasonable. Obtain approval of Departmental Representative.
 - .2 Locate equipment, fixtures and distribution systems to provide minimum interference and maximum usable space and in accordance with manufacturer's recommendations for safety, access and maintenance.
 - .3 Inform Departmental Representative when impending installation conflicts with other new or existing components. Follow directives for actual location.
 - .4 Submit field drawings to indicate relative position of various services and equipment when required by Departmental Representative.
- <u>1.22 FISH HABITAT</u> .1 This work is being conducted in an area where fish habitat may be affected. Perform work to conform with rules and regulations governing fish habitat and in accordance with authorization for work or undertakings affecting fish habitat.

- .2 Contact the local Department of Fisheries and Oceans detachment at least 48 hours in advance of starting any work on site. Submit confirmation to the Departmental Representative that DFO have been contacted.
- 1.23 NOTICE TO .1 Notify the Marine Communications and <u>SHIPPING/MARINERS</u> .1 Notify the Marine Communications and Traffic Services' Centre, of Fisheries and Oceans Canada, at (709)695-2168, ten (10) days prior to commencement and upon completion of the work, in order to allow for the issuance of Notices to Shipping/Mariners.
 - .2 During construction any vessels or barges utilized must be marked in accordance with the provisions of the Canada Shipping Act Collision Regulations.
- 1.24 ACCEPTANCE .1 Prior to the issuance of the Certificate of Substantial Performance, in company with Departmental Representative, make a check of all work. Correct all discrepancies before final inspection and acceptance.
 - .1 Responsible for coordinating the work of the various trades, where the work of such trades interfaces with each other.
 - .2 Convene meetings between trades whose work interfaces and ensure that they are fully aware of the areas and the extent of where interfacing is required. Provide each trade with the plans and specifications of the interfacing trade, as required, to assist them in planning and carrying out their respective work.
 - .3 Canada will not be responsible for or held accountable for any extra costs incurred as a result of the failure to carry out coordination work. Disputes between the

SUBMITTAL PROCEDURES

Section 01 33 00

Electrical Installation Summerford, NL 723249

Page 1 2020-04-26

PART 1 - GENERAL

1.1 SECTION INCLUDES .1 Shop drawings and product data.

- .2 Samples.
- .3 Certificates.

1.2 SUBMITTAL . GENERAL REQUIREMENTS

- .1 Submit to Departmental Representative for <u>ITS</u> review submittals listed, including shop drawings, samples, certificates and other data, as specified in other sections of the Specifications.
 - .2 Submit with reasonable promptness and in orderly sequence so as to allow for Departmental Representative's review and not cause delay in Work. Failure to submit in ample time will not be considered sufficient reason for an extension of Contract time and no claim for extension by reason of such default will be allowed.
 - .3 Do not proceed with work until relevant submissions are reviewed by Departmental Representative.
 - .4 Present shop drawings, product data, samples and mock-ups in SI Metric units.
 - .5 Where items or information is not produced in SI Metric units, provide soft converted values.
 - .6 Review submittals prior to submission to Departmental Representative. Ensure during review that necessary requirements have been determined and verified, required field measurements or data have been taken, and that each submittal has been checked and co-ordinated with requirements of Work and Contract Documents.

.1 Submittals not stamped, signed, dated

Electrical Installation Summerford, NL 723249

Page 2 2020-04-26

and identified as to specific project will be returned unexamined by Departmental Representative and considered rejected.

- .7 Notify Departmental Representative, in writing at time of submission, identifying deviations from requirements of Contract Documents stating reasons for deviations.
- .8 Verify field measurements and affected adjacent work and coordinate.
- .9 Contractor's responsibility for errors and omissions in submission is not relieved by Departmental Representative's review of submittals.
- .10 Contractor's responsibility for deviations in submission from requirements of Contract Documents is not relieved by Departmental Representative's review.
- .11 Submittal format: paper originals, or alternatively clear and fully legible photocopies of originals. Facsimiles are not acceptable, except in special circumstances pre-approved by Departmental Representative. Poorly printed non-legible photocopies or facsimiles will not be accepted and be returned for resubmission.
- .12 Make changes or revision to submissions which Departmental Representative may require, consistent with Contract Documents and resubmit as directed by Departmental Representative. When resubmitting, notify Departmental Representative in writing of any revisions other than those requested.
- .13 Keep one reviewed copy of each submittal document on site for duration of Work.

.1 The term "shop drawings" means drawings, diagrams, illustrations, schedules, performance charts, product data, brochures and other data which are to be provided by

1.3 SHOP DRAWINGS AND PRODUCT DATA .3

Electrical Installation	
Summerford, NL	Page 3
723249	2020-04-26

Contractor to illustrate details of a portion of Work.

- .2 Number of Shop Drawings: submit sufficient copies of shop drawings which are required by the General Contractor and sub-contractors plus 2 copies which will be retained by Departmental Representative. Ensure sufficient numbers are submitted to enable one complete set to be included in each of the maintenance manuals specified, if applicable.
 - Shop Drawings Content and Format: .1 Indicate materials, methods of construction and attachment or anchorage, erection diagrams, connections, explanatory notes and other information necessary for completion of Work. Where items or equipment attach or connect to other items or equipment, confirm that all interrelated work have been coordinated, regardless of section or trade from which the adjacent work is being supplied and installed.
 - .2 Shop Drawings Format:

.1 Opaque white prints or photocopies of original drawings or standard drawings modified to clearly illustrate work specific to project requirements. Maximum sheet size to be 1000 x 707 mm. .2 Product Data from manufacturer's standard catalogue sheets, brochures, literature, performance charts and diagrams, used to illustrate standard manufactured products, to be original full colour brochures, clearly marked indicating applicable data and deleting information not applicable to project.

.3 Non or poorly legible drawings, photocopies or facsimiles will not be accepted and returned not reviewed.
.4 Supplement manufacturer's standard drawings and literature with additional information to provide details applicable to project.

Electrical Installation		
Summerford, NL		Page 4
723249		2020-04-26
	5	Delete information not applicable to

.5 Delete information not applicable to project on all submittals.

- .4 Allow 10 calendar days for Departmental Representative's review of each submission.
- .5 Adjustments or corrections made on shop drawings by Departmental Representative are not intended to change Contract Price. If adjustments affect value of Work, advise Departmental Representative in writing prior to proceeding with Work.
- .6 If upon review by Departmental Representative, no errors or omissions are discovered or if only minor corrections and comments are made, fabrication and installation may proceed upon receipt of shop drawings. If shop drawings are rejected and noted to be Resubmitted, do not proceed with that portion of work until resubmission and review of corrected shop drawings, through same submission procedures indicated above.
- .7 Accompany each submission with transmittal letter, containing:
 - .1 Date.
 - .2 Project title and project number.
 - .3 Contractor's name and address.

.4 Identification and quantity of each shop drawing, product data and sample.

- .5 Other pertinent data.
- .8 Submissions shall include:
 - .1 Date and revision dates.
 - .2 Project title and project number.
 - .3 Name and address of:
 - .1 Subcontractor.
 - .2 Supplier.
 - .3 Manufacturer.

.4 Contractor's stamp, signed by Contractor's authorized representative certifying approval of submissions, verification of field measurements and compliance with Contract Documents. Electrical Installation Summerford, NL 723249

Page 5 2020-04-26

.5 Cross references to particular details of contract drawings and specifications section number for which shop drawing submission addresses.

.6 Details of appropriate portions of Work as applicable:

- .1 Fabrication.
- .2 Layout, showing dimensions,

including identified field dimensions, and clearances.

- .3 Setting or erection details.
- .4 Capacities.
- .5 Performance characteristics.
- .6 Standards.
- .7 Operating weight.
- .8 Wiring diagrams.
- .9 Single line and schematic
- diagrams.
- .10 Relationship to adjacent work.
- .9 After Departmental Representative's review, distribute copies.
- .10 The review of shop drawings by the Departmental Representative or their delegated representative is for sole purpose of ascertaining conformance with general concept. This review shall not mean that the Departmental Representative approves the detail design inherent in the shop drawings, responsibility for which shall remain with Contractor submitting same, and such review shall not relieve Contractor of responsibility for errors or omissions in shop drawings or of responsibility for meeting all requirements of the construction and Contract Documents. Without restricting generality of foregoing, Contractor is responsible for dimensions to be confirmed and correlated at job site, for information that pertains solely to fabrication processes or to techniques of construction and installation and for co-ordination of Work of all sub-trades.

	SUBMITTAL PROCEDURES	Section 01 33 00
Electrical Installation	1	
Summerford, NL		Page 6
723249		2020-04-26

1.4 SCHEDULES, PERMITS AND <u>CERTIFICATES</u> .1 Upon acceptance of bid, submit to Departmental Representative copy of Work Schedule and various other schedules, permits, certification documents and project management plans as specified in other sections of the Specifications.

- .2 Submit copy of permits, notices, compliance Certificates received by Regulatory Agencies having jurisdiction and as applicable to the Work.
- .3 Submission of above documents to be in accordance with Submittal General Requirements procedures specified in this section.

	ENVIRONMENTAL PROCEDURES	Section 01 35 43
Electrical Installation Summerford, NL 723249		Page 1 2020-04-26

<u>1.1 RELATED WORK</u> .1 Section 01 74 21 - Construction/Demolition Waste Management and Disposal.

- 1.2 DEFINITIONS .1 Hazardous Material: Product, substance, or organism that is used for its original purpose; and that is either dangerous goods or a material that may cause adverse impact to the environment or adversely affect health of persons, animals, or plant life when released into the environment.
- <u>1.3 FIRES</u> .1 Fires and burning of rubbish on site not permitted.
- 1.4 DISPOSAL OF.1Do not bury rubbish and waste materials onWASTES ANDsite. Dispose at approved landfill sites asHAZARDOUSspecified in Section 01 74 21.

MATERIALS

- .2 Do not dispose of hazardous waste or volatile materials, such as mineral spirits, paints, thinners, oil or fuel into waterways, storm or sanitary sewers or waste landfill sites.
- .3 Store, handle and dispose of hazardous materials and hazardous waste in accordance with applicable federal and provincial laws, regulations, codes and guidelines.
- .4 Dispose of construction waste materials and demolition debris, resulting from work, at approved landfill sites only. Carryout such disposal in strict accordance with provincial and municipal rules and regulations. Separate out and prevent improper disposal of items banned from landfills.
- .5 Establish methods and undertake construction practices which will minimize waste and optimize use of construction materials. Separate at source all construction waste materials, demolition debris and product

	ENVIRONMENTAL PROCEDURES	Section 01 35 43
Electrical Installation Summerford, NL 723249		Page 2 2020-04-26

packaging and delivery containers into various waste categories in order to maximize recycling abilities of various materials and avoid disposal of debris at landfill site(s) in a "mixed state". Where recycling firms, specializing in recycling of specific materials exist, transport such materials to the recycling facility and avoid disposal at landfill sites.

- .6 Communicate with landfill operator prior to commencement of work, to determine what specific construction, demolition and renovation waste materials have been banned from disposal at the landfill and at transfer stations.
- 1.5 DRAINAGE
- .1 Provide temporary drainage and pumping as necessary to keep excavations and site free from water.
- .2 Do not pump water containing suspended materials into waterways, sewer or drainage systems.
- .3 Control disposal or runoff of water containing suspended materials or other harmful substances in accordance with governing regulations and requirements.
- .4 Pumped water must meet applicable federal, provincial, and municipal standards before it can be discharged to a surface water body. If regulatory guidelines exceedences are noted, the Departmental Representative has the right to issue stop pumping instructions to the Contractor. Contractor will not be compensated for any delays associated with retrofitting equipment to meet guidelines.
- .5 Provide control devices such as filter fabrics, sediment traps and settling ponds to control drainage and prevent erosion of

	-	ENVIRONMENTAL PROCEDURES Section 01 35 4
Electrical Installatio Summerford, NL 723249	on	Page 3 2020-04-26
		adjacent lands. Maintain in good order for duration of work.
1.6 PERMITS	.1	All guidelines and instructions stated on permits must be strictly adhered to.
TO WATERWAYS	.1	Do not operate construction equipment in waterways.
	.2	Do not use waterway beds for borrow material
	.3	Do not dump excavated fill, waste material or debris in waterways.
	.4	At borrow sites, design and construct temporary crossings to minimize erosion to waterways in strict conformance with provincial and federal environmental regulations.
	.5	Do not skid logs or construction materials across waterways.
. 6	.6	Avoid indicated spawning beds when constructing temporary crossings of waterways.
	.7	Do not blast within 100 m of spawning beds
	.8	Do not refuel any type of equipment within 100 m of a water body. Maintain equipment i good working condition with no fluid leaks loose hoses or fittings.
1.8 POLLUTION .1 CONTROL	.1	Maintain temporary erosion and pollution control features installed under this contract.
	.2	Control emissions from equipment and plant

2 Control emissions from equipment and plant to local authorities emission requirements.

	ENVIRONMENTAL PROCEDURES	Section 01 35 43
Electrical Installation Summerford, NL 723249		Page 4 2020-04-26

- .3 Prevent sandblasting and other extraneous materials from contaminating air beyond application area, by providing temporary enclosures.
- .4 Cover or wet down dry materials and rubbish to prevent blowing dust and debris. Provide dust control for temporary roads and around entire construction site.
- .5 Maintain inventory of hazardous materials and hazardous waste stored on site. List items by product name, quantity and date when storage began.
- .6 Have emergency spill response equipment and rapid clean-up kit, appropriate to work, at site. Locate adjacent to work and where hazardous materials are stored. Provide personal protective equipment as required for clean-up.
- .7 Report, to Federal and Provincial Department of the Environment, spills of petroleum and other hazardous materials as well as accidents having potential of polluting the environment. Also notify Departmental Representative and submit a written spill report to Departmental Representative within 24 hours of occurrence.
- .8 Provide a floating debris containment boom whenever any of the Contractors methods of work allow for the potential of floating debris.
- 1.9 WILDLIFE <u>PROTECTION</u>
 .1 Should nests of migratory birds in wetlands be encountered during work, immediately notify Departmental Representative for directives to be followed. .1 Do not disturb nest site and neighbouring vegetation until nesting is completed.

	ENVIRONMENTAL PROCEDURES	Section 01 35 43
Electrical Installation		
Summerford, NL		Page 5

TEMPORARY FACILITIES Section 01 50 00

Electrical Installatio Summerford, NL 723249	n	Page 1 2020-04-26
1.1 ACCESS	.1	Provide and maintain adequate access to project site.
	.2	Maintain access roads for duration of contract and make good damage resulting from Contractors' use of roads.
1.2 CONTRACTOR'S SITE OFFICE	.1	Be responsible for and provide own site office, if required, including electricity, heat, lights and telephone. Locate site office as directed by Departmental Representative.
1.3 DEPARTMENTAL REPRESENTATIVE'S SITE OFFICE	.1	Provide or construct a separate site office for the use of the Departmental Representative and the Site Representative. The building must be in place prior to commencement of work.
	.2	Provide heating system to maintain 22°C inside temperature at -20°C outside temperature.
	. 3	The building will be approximately 2400 mm x 3600 mm. It will have a suitable frame covered with a weatherproof siding and lined with plywood or other approved material. The floor will be of 19 mm thick material. It will be provided with suitable window with at least 1 m ² of glass and arranged to provide at least 0.5 m ² of screened opening. The door will be fitted with a lockset and 2 keys.
	.4	The office will be equipped with a drafting chair and a 900 mm x 1500 mm table having a hinged, smooth wooden top suitable for drafting.
	.5	Install electrical lighting system to provide minimum 750 lux using surface mounted, shielded commercial fixtures with 10% upward light component.

	TEMPORARY F	FACILITIES	Section 01 50	00
Electrical Installation Summerford, NL 723249			Page 2 2020-04-26	

- .6 Maintain office in clean condition.
- .7 Arrange and pay for telephone and facsimile machine in the Departmental Representative's Office for Site Representative's exclusive use. Long distance calls or faxes placed on this phone by the Departmental Representative or the Site Representative will be paid by the Departmental Representative.
- .8 Contractor may, on approval of Departmental Representative, provide cellular or mobile phone. If approval to use cellular or mobile phone is granted, be responsible for all services, airtime, license and network access fees, and all other fees or charges required to utilize the phone as intended by the manufacturer.
- 1.4 SANITARY.1Provide sanitary facilities for work force
in accordance with governing regulations and
ordinances.
 - .2 Post notices and take such precautions as required by local health authorities. Keep area and premises in sanitary condition.
- <u>1.5 POWER</u> .1 Arrange, pay for and maintain temporary electrical power supply in accordance with governing regulations and ordinances.
 - .2 Supply and install all temporary facilities for power such as pole lines and underground cables to approval of local power supply authority.
- <u>1.6 WATER SUPPLY</u> .1 Arrange, pay for and maintain temporary water supply in accordance with governing regulations and ordinances.
- <u>1.7 SCAFFOLDING</u> .1 Design, construct and maintain scaffolding in rigid, secure and safe manner in accordance

	.2	Ensure that heaters and con correctly.	trols operate	

	COMMON WO	DRK RESULTS - ELECTRICAL Section 26 05 01
Electrical Instal Summerford, NL 723249	lation	Page 1 2020-06-05
PART 1 - GENERAL		
1.1 GENERAL	.1	This section covers items common to Sections of Division 23, 26 and 33. This section supplements requirements of Division 01 and 33.
1.2 CODES AND STANDARDS	.1	Do complete installation in accordance with CSA C22.1-2018 except where specified otherwise.
	. 2	Do overhead and underground systems in accordance with CSA C22.3 No.1-M1987 except where specified otherwise.
	.3	Abbreviations for electrical terms: to CSA Z85- 1983.
	.4	Adhere to DFC Standards, latest editions.
	.5	Adhere to Canadian Electrical Code - current edition.
1.3 CARE, OPERA AND START-UP	TION .1	Instruct Departmental Representative and operating personnel in the operation, care and maintenance of systems, system equipment and components.
1.4 VOLTAGE RAT	INGS .1	Operating voltages: to CAN3-C235-83.
	.2	Motors, electric heating, control and distribution devices and equipment to operate satisfactorily at 60 Hz within normal operating limits established by above standard. Equipment to operate in extreme operating conditions established in above standard without damage to equipment.
1.5 PERMITS, FE AND INSPECTION	ES .1	Submit to Electrical Inspection Department and Supply Authority necessary number of drawings and specifications for examination and approval prior to commencement of work.
	.2	Pay associated fees.

COMMON WORK RESULTS - ELECTRICAL Section 26 05 01

Summerford, NL 723249		Page 2 2020-06-05
	.3	Departmental Representative will provide drawings and specifications required by Electrical Inspection Department and Supply Authority at no cost.
	.4	Notify Departmental Representative of changes required by Electrical Inspection Department prior to making changes.
	.5	Furnish Certificates of Acceptance from Electrical Inspection Department and authorities having jurisdiction on completion of work to Departmental Representative.
1.6 MATERIALS AND EQUIPMENT	.1	Provide materials and equipment in accordance with Division 01.
	. 2	Equipment and material to be CSA certified Where there is no alternative to supplying equipment which is not CSA certified, obtain special approval from Electrical Inspection Department.
	.3	Factory assembles control panels and component assemblies.
<u>1.7 FINISHES</u>	.1	Shop finish metal enclosure surfaces by application of rust resistant primer insid and outside, and at least two coats of finish enamel.
	.2	Clean and touch up surfaces of shop painte equipment scratched or marred during shipment or installation, to match origina paint.
	.3	Clean and prime exposed non-galvanized hangers, racks and fastenings to prevent rusting.
1.8 EQUIPMENT IDENTIFICATION	.1	Identify electrical equipment with nameplates as follows:

.2 Nameplates:

Each shop drawing for non-catalogue items .6 shall be prepared specifically for this project. If brochures are submitted for catalogue items, the brochures shall be marked definitely indicating the item or items to be supplied. .7 Work shall not be proceeded until final review of shop drawings are received by the Contractor. . 8 Shop Drawing Review is for general compliance with contract documents. No responsibility is assumed by the Departmental Representative for correctness of dimensions or details. Corrections or comments made on the shop drawings during the Departmental Representative's review do not relieve the Contractor from compliance with the requirements of the drawings and specifications. 1.19 OPERATION AND .1 Submit operation and maintenance data in accordance with Division 01. MAINTENANCE DATA

.2 Include in manuals information based on

COMMON WORK RESULTS - ELECTRICAL Section 26 05 01

Electrical Installation Summerfor 723249

Summerford, NL 723249	Page 8 2020-06-05
	<pre>following requirements: 1. Operation and maintenance instructions to be sufficiently detailed with respect to design elements, construction features and component function and maintenance requirements, to permit effective startup. Operation, maintenance, repair, modification, extension and expansion of any portion or feature of installation. 2. Technical data to be in the form of approved shop drawings, project data, supplemented by bulletins, component illustrations, exploded views technical descriptions of items, and parts lists. Advertising of sales literature will not be accepted. 3. Provide wiring and schematic diagrams and performance curves. 4. Include names and addresses of local suppliers for all items included in maintenance manuals. 5. Material to be in English.</pre>
1.20 MATERIAL SPECIFIED	.1 Where substitutions are to be submitted for materials bearing the clause "or approved equal", approval of the substitute item must be submitted to the Departmental Representative at

least TEN DAYS PRIOR to the closing date of the tender. The proposed substitution shall show product name, complete specification and be equal to, or better than the named item. No increase in the tender price shall be made for such a substitution should it be accepted. Accepted equals will be listed in an addendum seven days prior to the Trade closing date.

.2 Where additional manufacturers are named under Articles entitled "Approved Manufacturers", the choice of which of the manufacturers named in reference to a particular article is to be used, shall be the Contractors.

Materials or product specified without the .3

COMMON WORK RESULTS - ELECTRICAL Section 26 05 01

Electrical Installation Summerford, NL 723249

Page 9 2020-06-05

clauses "or approved equal" or "approved manufacturers" shall be supplied as specified and no proposed substitution will be considered.

.4 Where approvals are granted for the use of other equipment any and all changes or additions required for the installation or operation of the approved equipment will be made by the Contractor at his own expense and no claims will be approved for any such changes, notwithstanding approval of shop drawings. Equipment that is accepted and installed and then does not perform as represented by original submitted data shall be replaced by the Contractor with equipment as specified, at no charge to the Canada.

1.21 QUALIFICATIONS .1 Qualified trades people shall be used for <u>OF WORKERS</u> all disciplines of the electrical work required for this project.

1.22 EXAMINATION OF <u>OTHER WORK</u> .1 This Division requires the examination of the material and work of all other Divisions upon which the work of this Section depends for proper completion. Any defect in work, levels, or materials, shall be reported to the Departmental Representative. The work of this Division shall not commence until such defects have been corrected.

1.23 DRAWINGS,.1 The drawings shall be considered to showCHANGESthe general character and scope of the work andACCESSIBILITYnot the exact details of the installation.

.2 The installation shall be completed with all supports and accessories required for a complete operative and satisfactory installation.

.3 The location, arrangement and connection of equipment and material as shown on the drawings represents a close approximation to the intent and requirements of the Contract.

- <u>1.1 RELATED SECTIONS</u> .1 Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section. .2 Section 26 05 20 - Wire and Box Connectors
 - 0 1000 V.
- <u>1.2 REFERENCES</u> .1 CSA C22.2 No .0.3-96, Test Methods for Electrical Wires and Cables.

.2 CAN/CSA-C22.2 No. 131-M1989 (R1994), type Teck 90 cable.

<u>1.3 PRODUCT DATA</u> .1 Submit product data in accordance Division 01.

PART 2 - PRODUCTS

<u>2.1 BUILDING WIRES</u> .1 Conductors: stranded for 10 AWG and larger. Minimum size: 12 AWG.

.2 Copper conductors: size as indicated, with 600V insulation of chemically cross-linked thermosetting polyethylene material rated RW90 XLPE and RWU90 XLPE as indicated.

.3 All wiring shall be installed in conduit as indicated.

PART 3 - EXECUTION

.1 Install wiring as follows: 3.1 INSTALLATION OF BUILDING WIRES 1. In conduit systems in accordance with Section 26 05 34 - Conduits, Conduit Fastenings and Conduit Fittings. Terminate cables in accordance with 2. Section 26 05 20 Wire and Box Connectors 0 - 1000 V.

GROUNDING - SECONDARY

.3 CAN/CSA Z32 [1999], Electrical Safety and Essential Electrical Systems in Health Care Facilities.

PART 2 - PRODUCTS

<u>2.1 MATERIALS</u> .1 Grounding equipment to: CSA C22.2 No. 41-1950 (R1967).

> .2 Copper grounding conductors to: ASA G7.1-1963.

<u>2.2 EQUIPMENT</u> .1 Copper conductor to each electrode to be bare, stranded, tinned, soft annealed, size as indicated.

.2 Rod electrodes, copper clad steel, 19mm diameter by 3 m long.

.3 Copper ground conductor to sea bed.

.4 Insulated grounding conductors: as per Conductors specification section.

GROUNDING - SECONDARY

Electrical Installation Summerford, NL 723249

Page 2 2020-06-05

.5 Non-corroding accessories necessary for grounding system, type, size, material as indicated, including but not necessarily limited to:

- 1. Grounding and bonding bushings.
- 2. Protective type clamps.
- 3. Bolted type conductor connectors.
- 4. Thermit welded type conductor connectors.
- 5. Bonding jumpers, straps.
- 6. Pressure wire connectors.
- 7. Bronze ground plate as indicated.

PART 3 - EXECUTION

3.1 INSTALLATION GENERAL

.1 Install complete permanent, continuous system and circuit equipment, grounding systems including electrodes, conductors, connectors, accessories, as indicated, to conform to requirements of Departmental Representative and authority jurisdiction local having over installation. Where conduits are used, install minimum #10 AWG insulated green ground а conductor throughout the complete conduit system and connect all outlet boxes, devices, equipment and panel ground bus to this ground conductor.

.2 Install connectors in accordance with manufacturer's instructions.

.3 Protect exposed grounding conductors from mechanical injury.

.4 Make buried connections, and connections to conductive water main, electrodes, using copper welding by thermit process.

.5 Use mechanical connectors for grounding connections to equipment provided with lugs.

.6 Soldered joints not permitted.

.7 Install bonding wire for flexible conduit,

GROUNDING - SECONDARY

Summerford, NL 723249	Page 3 2020-06-05
	connected at one end to grounding bushing, solderless lug, clamp or cup washer and screw. Neatly clean bonding wire to exterior of flexible conduit. .8 Install separate ground conductor to outdoor lighting standards and receptacles located on power pedestals.
	.9 Install copper grounding conductor run in conduit from electrical service to sea bed. Provide 25 meter coil of ground conductor at sea bed. Install as per Canadian Electrical Code.
3.2 ELECTRODES	.1 Install rod, plate electrodes and make grounding connections.
	.2 Bond separate, multiple electrodes together.
	.3 Bronze ground plate as indicated.
3.3 TESTS	.1 Perform tests in accordance with Section 26 05 01 - Common Work Results - Electrical.
	.2 Perform ground continuity and resistance tests using method appropriate to site conditions and to approval of Departmental Representative and local authority having jurisdiction over installation.
	.3 Perform tests before energizing electrical system.

PART 1 - GENERAL

- 1.1 RELATED.1 Drawings and general provisions of the
Contract, including General and Supplementary
Conditions and Division 01 Specification
Sections, apply to this Section.
- 1.2 SHOP DRAWINGS .1 Submit shop drawings and product data for <u>AND PRODUCT DATA</u> cabinets in accordance with Division 01 -Submittal Procedures.
- PART 2 PRODUCTS

2.1 JUNCTION AND .1 Weatherproof junction and pull boxes as <u>PULL BOXES</u> indicated and sized on drawings. To be used for exterior electrical connections on poles for lighting circuits and wharf receptacles.

.2 Enclosures rating EEMAC 4X and threaded hubs. Corrosion resistant to salt environment.

PART 3 - EXECUTION

3.1 JUNCTION & PULL .1 Install junction and pull boxes in BOX INSTALLATIONS locations as indicated on drawings.

.2 Only main junction and pull boxes are indicated. Install pull boxes so as not to exceed 30 m of conduit run between pull boxes.

<u>3.2 IDENTIFICATION</u> .1 Provide equipment identification in accordance with Section 26 05 01 - Common Work Results - Electrical.

.2 Install size 2 identification labels indicating system name, voltage and phase.

1.1 RELATED DOCUMENTS	.1 Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.
1.2 LOCATION OF CONDUIT	.1 Drawings show all conduits in their approximate locations only.
1.2 APPROVALS, CODES AND PERMITS	.1 All work shall be done in accordance with latest edition of the Canadian Electrical Code C22.1-2018.
	.2 Contractor shall present the drawings to the Electrical Inspection Authority for approval and obtain a permit before starting work.

.3 Notify the Departmental Representative of any changes required before proceeding.

PART 2 - PRODUCTS

2.1 CONDUIT Liquid tight flexible conduit to CSA C22.2 .1 56. To be used for final connection to No. lighting fixtures.

> .2 Rigid PVC conduit: to CSA C22.2 No. 211.2. To be used below grade unless noted otherwise.

> .3 Epoxy coated conduit: to CSA C22.2 No. 45 with zinc coating and corrosion resistant epoxy To be used for finish inside and outside. electrical service. See drawing details.

2.2 CONDUIT One hole PVC straps to secure surface .1 conduits 50 mm and smaller. Two hole PVC straps FASTENINGS for conduits larger than 50 mm.

CONDUIT, CONDUIT FASTENINGS AND CONDUIT FITTINGS

Summerford, NL 723249	Page 2 2020-06-05
	.2 Beam clamps to secure conduits to exposed steel work.
	.3 Channel type supports for two or more conduits at 1 m oc.
	.4 Threaded rods, 6 mm dia., to support suspended channels.
2.3 CONDUIT FITTINGS	.1 Fittings for raceways: to CSA C22.2 No. 18-M1987.
	.2 Factory 90° bends are required for 25 mm and larger conduits.
	.3 Fittings manufactured for use with conduit specified, approved for encasement in slab.
2.4 EXPANSION FITTINGS FOR RIGID CONDUIT	.1 Weatherproof expansion fittings with internal bonding jumper suitable for linear expansion and 19mm deflection in all directions as required.
	.2 Watertight expansion fittings with integral bonding jumper suitable for linear expansion and 19mm deflection in all directions as required.
	.3 Weatherproof expansion fittings for linear expansion at entry to panel as required.
2.5 FISH CORD	.1 6mm stranded nylon pull rope tensile strength 5 KN.
PART 3 - EXECUTION	
3.1 INSTALLATION	.1 Install conduit in centre one-third of concrete slab in location as shown for conduits in deck.

.2 Ensure conduit has a minimum concrete

Section 26 24 17

Electrical Installation	
Summerford, NL	Page 1
723249	2020-06-05

PART 1 - GENERAL

1.1 SECTION INCLUDES	.1 Materials and installation for standard and custom breaker type panelboards.
1.2 RELATED SECTIONS	 .1 Section 01 33 00 - Submittal Procedures. .2 Section 26 28 21 - Moulded Case Circuit
	Breakers. .3 Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division O1 Specification Sections, apply to this Section.
1.3 SHOP DRAWINGS	 .1 Submit shop drawings in accordance with Section 01 33 00 - Submittal Procedures. .2 Drawings to include electrical detail of panel, branch breaker type, quantity, ampacity and enclosure dimension.
PART 2 - PRODUCTS	
2.1 PANELBOARDS	.1 Panelboards: to CSA C22.2 No. 29 and product of one manufacturer.
	 Install circuit breakers in panelboards before shipment. In addition to CSA requirements manufacturer's nameplate must show fault current that panel including breakers has been built to withstand.
	.2 250V panelboards: bus and breakers rated for 18,000 A (symmetrical) interrupting capacity or as indicated.
	.3 250 V panelboards shall be complete with bolt- on circuit breakers.

.4 Sequence phase bussing with odd numbered

PANELBOARDS BREAKER TYPE

	breakers on left and even on right, with each breaker identified by permanent number identification as to circuit number and phase.
	.5 Panelboards: mains, number of circuits, and number and size of branch circuit breakers as indicated.
	.6 Two keys for each panelboard and key panelboards alike.
	.7 Copper bus with neutral of same ampere rating as mains.
	.8 Mains: suitable for bolt-on breakers.
	.9 Trim with concealed front bolts and hinges.
	.10 Trim and door finish: baked grey enamel.
	.11 Panel to be complete with main breaker as indicated.
	.12 Panel to be service entrance rated.
2.2 BREAKERS	.1 Breakers: to Section 26 28 21- Moulded Case Circuit Breakers.
	.2 Breakers with thermal and magnetic tripping in panelboards except as indicated otherwise.
2.3 EQUIPMENT IDENTIFICATION	.1 Provide equipment identification in accordance with Section 26 05 01 - Common Work Results - Electrical.
	.2 Nameplate for each panelboard size 4 engraved as indicated. Indicate on nametag the supply distribution panelboard.
	.3 Complete circuit directory with typewritten legend showing location and load of each circuit.
PART 3 - EXECUTION	
3.1 INSTALLATION	.1 Locate panelboards as indicated and mount

PANELBOARDS BREAKER TYPE Section 26 24 17

PART 1 - GENERAL

1.1 RELATED.1 Drawings and general provisions of the
Contract, including General and Supplementary
Conditions and Division 01 Specification
Sections, apply to this Section.

<u>1.2 SUMMARY</u> .1 Section Includes: 1. Wiring Devices.

1.3 SHOP DRAWINGS .1 Submit shop drawings and product data in <u>AND PRODUCT DATA</u> accordance with Division 01 Specification Sections.

PART 2 - PRODUCTS

- 2.1 SWITCHES
- .1 15 A, 120 V, single pole, double pole, three-way, four-way switches as indicated to: CSA-C22.2 No.55 and CSA-C22.2 No.111.
- .2 Manually-operated general purpose ac switches with following features:
 - .1 Terminal holes approved for No. 10 AWG wire.
 - .2 Silver alloy contacts.
 - .3 Urea or melamine moulding for parts subject to carbon tracking.
 - .4 Suitable for back and side wiring.
 - .5 White toggle.
 - .6 Specification grade.
- .3 Toggle operated fully rated for lamps, and up to 80% of rated capacity of motor loads.
- .4 Switches of one manufacturer throughout project.

WIRING DEVICES

Section 26 27 26

Electrical Installat: Summerford, NL 723249	Page 2 2020-06-05
	.5 Acceptable products:
	.1 Hubbel HBL 1201 W,
	.2 Leviton 1201-2W,
	.3 Pass and Seymour.
2.2 RECEPTACLES	.1 Receptacles, plugs and similar wiring devices to: CSA C22.2 #42M-1984.
	.2 Duplex receptacles, marine grade, flush mounted CSA type 5-15 R, 125 V, 15 A, U ground, with following features: 1. Yellow urea moulded housing.
	2. Suitable for No. 10 AWG for back and
	side wiring. 3. Break-off links for use as split
	receptacles.
	 Eight back wired entrances, four side wiring screws.
	5. Double wipe contacts and riveted grounding contacts.
	.3 All receptacles shall be marine grade and of one manufacturer throughout project.
	.4 Supply and install other marine grade receptacles as indicated on drawings.
2.3 COVERPLATES	.1 PVC marine grade coverplates for wiring devices unless otherwise indicated on plans.
	.2 Coverplates from one manufacturer throughout project.
	.3 PVC cover plates for wiring devices mounted in surface mounted FS or FD type unless otherwise indicated on plans.
	.4 Weatherproof coverplates as indicated.

WIRING DEVICES

Electrical Installation Summerford, NL 723249

Page 3 2020-06-05

PART 3 - EXECUTION

3.1 INSTALLATION .1 Receptacles: Install receptacles in gang type 1. outlet box when more than one receptacle is required in one location. Mount receptacles at height specified 2. in Section 26 05 01 - Common Work Results -Electrical or as indicated. .2 Coverplates: Protect cover plate finish with paper 1. or plastic film until painting and other work is finished. Install suitable common coverplates 2. where wiring devices are grouped. Do not use coverplates meant for 3. flush outlet boxes on surface-mounted boxes. 4. Contractor to run separate neutral for each circuit.

PART 1 - GENERAL

1.1 RELATED.1 Drawings and general provisions of the
Contract, including General and Supplementary
Conditions and Division 01 Specification
Sections, apply to this Section.

<u>1.2 SUMMARY</u> .1 Section Includes: 1. Moulded Case Circuit Breakers.

<u>1.3 PRODUCT DATA</u> .1 Submit product data in accordance with Section 01 33 00 - Submittal Procedures.

.2 Include time-current characteristic curves for breakers with ampacity of 300 Amp and over with interrupting capacity of 10,000 A symmetrical (rms) and over at system voltage.

PART 2 - PRODUCTS

2.1 BREAKERS GENERAL .1 Bolt-on moulded case circuit breaker: quick- make, quick-break type, for manual and automatic operation with temperature compensation for 40°C ambient.

.2 Common-trip breakers: with single handle for multi-pole applications.

.3 Magnetic instantaneous trip elements in circuit breakers to operate only when value of current reaches setting. Trip settings on breakers with adjustable trips to range from 3-8 times current rating.

.4 Circuit breakers with interchangeabletrips as indicated..5 Interrupting capacity to be 18,000 Amps

.5 Interrupting capacity to be 18,000 Amps symmetrical (rms).

MOULDED CASE CIRCUIT BREAKERS

	.1	Install exit lights recommendations, listi	s to manufacturer's

- recommendations, listing requirements, NFPA standard and local regulatory requirements.
- .2 Connect fixtures to exit light circuits using RW90 wire in rigid PVC conduit.
- .3 Connect emergency lamp sockets to emergency circuits.
- .4 Ensure that exit light circuit breaker is locked in on position.
- .5 Provide tests in accordance with Section 26 05 01 - Common Work Results - Electrical.

3.2 CLEANING

- .1 Proceed in accordance with Section 01 74 11 - Cleaning.
- .2 On completion and verification of performance of installation, remove surplus materials, excess materials, rubbish, tools and equipment.

	COMMISSIONING	OF	ELECTRICAL	SYSTEMS	Section	26	80	00
Electrical Ins	stallation							
Summerford, NI	J				Page 1			
723249					2020-06-	-05		
PART 1 - GENERAL	L							

1.1 SCOPE OF WORK .1 Testing and commissioning are called for throughout the individual specifications. This does not relieve this trade from providing all testing and commissioning necessary to ensure that systems and equipment operate as required and that they interface with other systems and equipment as required.

<u>1.2 SECTION INCLUDES</u> .1 Commissioning of all building electrical systems and component including:

- .1 Testing and adjustment.
- .2 Demonstrations and Training.
- .3 Instructions of all procedures for Owner's personnel.
- .4 Updating as-built data.
- .5 Co-ordination of Operation and Maintenance material.
- 1.3 RELATED SECTIONS
- .1 Section 01 78 00 Closeout Submittals.
- .2 Section 26 05 01 Common Work Results - Electrical.

1.4 REFERENCES

- .1 CSA (Canadian Standards Association).
- .2 Underwriters Laboratories of Canada.

1.5 QUALITY ASSURANCE

- .1 Provide qualified trades persons, certified testing agencies, factory trained and approved by the Commissioning Team Leader.
- .2 Submit the names of all personnel to be used during the Commissioning

COMMISSIONING OF ELECTRICAL SYSTEMS

Electrical Installation Summerford, NL 723249

723249		2020-06-05		
		activities for Owner Approval.		
1.6 COMMISSIONING	.1	The purpose of the commissioning process is to fully test all electrical components and operating procedures by challenging these systems to realistic operation conditions.		
	.2	The Commissioning activities shall be co-ordinated by the General Contractor.		
	. 3	Commissioning activities for the electrical systems must have available up to date as-built drawing information and accurate Operations and Maintenance Manuals. These documents shall be a major part of this activity.		
	. 4	Contractor shall be responsible to update all documentation with information and any changes duly noted during the Commissioning exercise.		
	.5	Contractor shall arrange for all outside suppliers, equipment manufacturers, test agencies and others as identified in the		

- 11 nt nd he commissioning sections of this specification. The cost associated with this requirement shall be included as part of the tender price.
- As-built drawings and data books must .1 be available two weeks prior to commissioning for review and use by the consultant and Commissioning Team prior to the start of the commissioning activities.
- .1 Provide test instruments required for all activities as defined in the commissioning documents.

1.7 SUBMITTALS

1.8 PREPARATION

Page 2

COMMISSIONING OF ELECTRICAL SYSTEMS Section 26	8
--	---

Electrical Installation Summerford, NL 723249 0 00

- .2 Verify all systems are in compliance with the requirements of the commissioning documents prior to the precommissioning check out operation.
- .3 Confirm all scheduled activities have identified personnel available.
- .4 Where systems or equipment do not operate as required, make the necessary corrections or modifications, re-test and recommission.

1.9 SYSTEM

DESCRIPTION

- .1 Perform all startup operations, control adjustment, trouble shooting, servicing and maintenance of each item of equipment as defined in the commissioning documentation.
- .2 Owner will provide list of personnel to receive instructions and will coordinate their attendance at agreed upon times.
- .3 Prepare and insert additional data in the operations and maintenance manuals and update as-built drawings when need for additional data becomes apparent during the commissioning exercise.
- .4 Where instruction is specified in the commissioning manual, instruct personnel in all phases of operation and maintenance using operation and maintenance manuals as the basis of instruction.
- .5 Conduct presentation on Owner's premises. Owner will provide space.
- .1 This trade shall assemble all testing data and commissioning reports and

1.10 FINAL REPORT

Electrical Installation Summerford, NL 723249

1.11 SCHEDULE OF

ACTIVITIES

the

2020-06-05 submit them to the Owner. .2 Each form shall bear signature of recorder, and that of supervisor of reporting organizer. .1 Commissioning activities shall be conducted based on pre-established

commissioning team.

.2 Adhering to the established schedule is very important as the co-ordination and scheduling of the participants will be difficult to alter once this is established. Close co-ordination of this schedule is important.

schedule with all members of

.3 the event project cannot In be commissioned in the allotted time slot, the contractor shall pay for all costs associated with assembling the Commissioning Team at a later date. If the contractor has not performed his duties to reach commissioning stage as outlined earlier, he will incur all expenses of other trades and the Commissioning Team due to his noncompliance.

PART 2 - PRODUCTS NOT APPLICABLE TO THIS SECTION

PART 3 - EXECUTION NOT APPLICABLE TO THIS SECTION

Section 31 05 17

1.3 SAMPLES	1	Submit samples in accordance with Section 01 33 00 - Submittal Procedures.
	.2	Allow continual sampling by Departmental Representative during production.
	.3	Provide Departmental Representative with access to source and processed material for sampling.
	.4	Install sampling facilities at discharge end of production conveyor, to allow Departmental Representative to obtain representative samples of items being produced. Stop conveyor belt when requested by Departmental Representative to permit full cross section sampling.
	.5	Pay cost of sampling and testing of aggregates which fail to meet specified requirements.
1.4 WASTE MANAGEMENT AND DISPOSAL	.1	Divert unused granular materials from landfill to local quarry facility as approved by Departmental Representative.

AGGREGATE MATERIALS

Section 31 05 17

Electrical Installation	
Summerford, NL	
723249	

Page 2 2020-04-26

PART 2 - PRODUCTS

2.1 MATERIALS .1 Aggregate quality: sound, hard, durable material free from soft, thin, elongated or laminated particles, organic material, clay lumps or minerals, or other substances that would act in deleterious manner for use intended.

- .2 Flat and elongated particles of coarse aggregate: to ASTM D4791..1 Greatest dimension to exceed five times least dimension.
- .3 Fine aggregates satisfying requirements of applicable section to be one, or blend of following:
 - .1 Natural sand.
 - .2 Manufactured sand.
 - .3 Screenings produced in crushing of quarried rock, boulders, gravel or slag.
- .4 Coarse aggregates satisfying requirements of applicable section to be one of or blend of following:
 - .1 Crushed rock.

.2 Gravel and crushed gravel composed of naturally formed particles of stone..3 Light weight aggregate, including slag and expanded shale.

- .1 Inform Departmental Representative of _ proposed source of aggregates and provide access for sampling at least 2 weeks prior to commencing production.
 - .2 If, in opinion of Departmental Representative, materials from proposed source do not meet, or cannot reasonably be processed to meet, specified requirements, locate an alternative source or demonstrate that material from source in question can be processed to meet specified requirements.
- 2.2 SOURCE QUALITY CONTROL

	AGGREGATE MATERIALS	Section 31 05 17
Electrical Installation		
Summerford, NL		Page 3
723249		2020-04-26

- .3 Advise Departmental Representative 2 weeks in advance of proposed change of material source.
- .4 Acceptance of material at source does not preclude future rejection if it fails to conform to requirements specified, lacks uniformity, or if its field performance is found to be unsatisfactory.

PART 3 - EXECUTION

- 3.1 PREPARATION .1 Aggregate source preparation .1 Prior to excavating materials for aggregate production, clear and grub area to be worked, and strip unsuitable surface materials. Dispose of cleared, grubbed and unsuitable materials as directed by Departmental Representative. .2 Where clearing is required, leave screen of trees between cleared area and roadways as directed. Clear, grub and strip area ahead of .3 quarrying or excavating operation sufficient to prevent contamination of aggregate by deleterious materials. .4 When excavation is completed dress sides of excavation to nominal 1.5:1 slope, and provide drains or ditches as required to prevent surface standing water. .5 Trim off and dress slopes of waste material piles and leave site in neat condition.
 - .2 Processing

.1 Process aggregate uniformly using methods that prevent contamination, segregation and degradation..2 Blend aggregates, if required, to obtain gradation requirements, percentage

Electrical Installation Summerford, NL 723249

Page	4
2020-	04-26

of crushed particles, or particle shapes, as specified. Use methods and equipment approved by Departmental Representative. .3 Wash aggregates, if required to meet specifications. Use only equipment approved by Departmental Representative. .4 When operating in stratified deposits use excavation equipment and methods that produce uniform, homogeneous aggregate.

.3 Handling

.1 Handle and transport aggregates to avoid segregation, contamination and degradation.

.4 Stockpiling

.1 Stockpile aggregates on site in locations as indicated unless directed otherwise by Departmental Representative. Do not stockpile on completed pavement surfaces.

.2 Stockpile aggregates in sufficient quantities to meet Project schedules.
.3 Stockpiling sites to be level, well drained, and of adequate bearing capacity and stability to support stockpiled materials and handling equipment.

.4 Except where stockpiled on acceptably stabilized areas, provide compacted sand base not less than 300 mm in depth to prevent contamination of aggregate. Stockpile aggregates on ground but do not incorporate bottom 300 mm of pile into Work.

.5 Separate different aggregates by strong, full depth bulkheads, or stockpile far enough apart to prevent intermixing. .6 Do not use intermixed or contaminated materials. Remove and dispose of rejected materials as directed by Departmental Representative within 48 hours of rejection.

.7 Stockpile materials in uniform layers of thickness as follows:

.1 Max 1.5 m for coarse aggregate

Electrical Installation Summerford, NL 723249

Page 5 2020-04-26

and base course materials. Max 1.5 m for fine aggregate and .2 sub-base materials. Max 1.5 m for other materials. .3 .8 Uniformly spot-dump aggregates delivered to stockpile in trucks and build up stockpile as specified. Do not cone piles or spill material .9 over edges of piles. .10 Do not use conveying stackers. .11 During winter operations, prevent ice and snow from becoming mixed into stockpile or in material being removed from stockpile.

- 3.2 CLEANING .1 Leave aggregate stockpile site in tidy, well drained condition, free of standing surface water.
 - .2 Leave any unused aggregates in neat compact stockpiles as directed by Departmental Representative.
 - .3 For temporary or permanent abandonment of aggregate source, restore source to condition meeting requirements of authority having jurisdiction.

the contractor furnishes and satisfactorily incorporates into the product supplementary sizes from other sources to produce the required grading. If the deficiencies occur in Class "A" materials, corrections may be attempted by crushing to a smaller maximum particle size. In that event, the Departmental Representative will furnish special grading limits on the actual maximum particle size.

- Material shall be considered unsuitable .4 even though particle sizes are within the specified gradation limits if particle shape or any other characteristic precludes satisfactory compaction or fails to provide a roadway suitable for traffic. If, in the opinion of the Departmental Representative, an improved particle shape can be achieved by using a different crushing unit for that proposed by the contractor, then the Contractor shall supply and use a crushing unit of the type directed by the Departmental Representative.
- .5 Class "A" shall be processed by crushing and, when necessary, to eliminate surplus fines passing the 4.76 mm sieve, shall be screened and washed.
- PART 3 EXECUTION
- 3.1 INSTALLATION
- .1 Place granular base after sub-base surface is inspected and approved by Departmental Representative.
- .2 Placing:
 - .1 Construct granular base to depth and grade in area indicated.
 - .2 Ensure no frozen material is placed.

Electrical Installation		
Summerford, NL		Page 4
723249		2020-04-26
	.3	Place material only on clean unfrozen surface, free from snow and ice.
	. 4	The contractor shall place all granular bases in such a manner as to prevent contamination by other materials and to prevent segregation. If, in the opinion of the Departmental Representative, the methods and techniques used by the Contractor cannot overcome contamination or segregation, then the Departmental Representative may direct a modification in these methods which may require the use of an approved spreader box or other acceptable device.
	. 5	All granular bases shall be placed in uniform layers such that the thickness of the compacted layer does not exceed 50 mm.
	.6	Prior to closing down operations for each working day, all granular materials shall be bladed and compacted to the specified density.
	. 7	The materials shall be sprayed with water when and as directed by the Departmental Representative, either to aid compaction or reduce dust nuisance or both. When water is added to aid compaction, it shall be applied immediately ahead of the compacting unit
	.8	Each layer of granular base shall be bladed shaped and compacted as necessary to produce the required profile and cross-section. The finished surface shall not deviate at any place on a 3 m straight edge by more than 10mm for Class "A".

The upper layer shall be maintained to these tolerances and

to the specified density until compaction of the contract. This may require keeping the moisture content at the appropriate value during periods of dry weather in addition to regarding and re-compacting as frequently as may be deemed necessary by the Departmental Representative.

- .3 Shape each layer to smooth contour and compact to specified density before succeeding layer is placed.
- .4 Compaction Equipment:
 - .1 Compaction equipment to be capable of obtaining required material densities.
- .5 Compacting:
 - .1 All Class "A" materials shall be compacted to not less than 100% of the maximum Standard Proctor Dry Density ASTM D698-07e1 Method D.
 - .2 Compaction operations shall be carried out as closely as possible behind the placing and spreading operation. At the end of each working day, all materials placed shall have been compacted to the specified density.
 - .3 Each layer of material shall be graded and compacted as specified before the next layer is placed.
 - .4 Where necessary to obtain the required compaction, the contractor shall apply sufficient water by means of an approved distributor.
- .1 Testing of materials and compaction will be carried out by testing laboratory designated by the Departmental Representative.

3.2 INSTALLATION

- .4 Provide approved storage, heating tanks and pumping facilities for asphalt cement.

 .1 Separate waste materials for reuse and recycling in accordance with Section
 01 74 21 - Construction/Demolition Waste Management And Disposal.

- .2 Remove from site and dispose of all packaging materials at appropriate recycling facilities.
- .3 Collect and separate for disposal paper, plastic, polystyrene, corrugated cardboard and packaging material in appropriate onsite bins for recycling in accordance with Waste Management Plan.
- .4 Divert unused aggregate materials from landfill to quarry facility for reuse as approved by Departmental Representative.
- .5 Divert unused asphalt from landfill to facility capable of recycling materials.
- .6 Fold up metal banding, flatten and place in designated area for recycling.
- .1 <u>Asphalt</u>: will be measured by the square metre (m²) of compacted surface coarse asphalt installed in the work within the limits indicated on the drawings. The square metre area includes varying thicknesses of compacted asphalt (with the minimum being 80mm) to provide positive site drainage.

	ASPHALT PAVING	Section 32 12 16
Electrical Installation		
Summerford, NL		Page 5
723249		2020-04-26

.2 No separate payment will be made for any other ingredient or feature of the work and all factors, including asphalt bituminous tack coat, compaction, cold weather, asphalt, aggregates, granular base courses, saw cutting, and all plant, labour and materials is inclusive in the above price.

PART 2 - PRODUCTS

2.1 MATERIALS

.1

- Performance graded asphalt cement: to AASHTO M320, grade PG 58 - 28 when tested to AASHTO R29.
- .2 Aggregates: in accordance with Section 31 05 17 - Aggregate Materials: General and following requirements: .1 Crushed stone or gravel. .2 Gradations: within limits specified when tested to ASTM C136 and ASTM C117. Sieve sizes to CAN/CGSB-8.2. .3 Table

Sieve Designation % Passing

	Lower	Surface
	Course	Course
200 mm	-	_
75 mm	_	-

.4 Coarse aggregate: aggregate retained on 4.75 mm sieve and fine aggregate is aggregate passing 4.75 mm sieve when tested to ASTM C136. .5 When dryer drum plant or plant without hot screening is used, process fine aggregate through 4.75 mm sieve and stockpile separately from coarse aggregate. .6 Do not use aggregates having known polishing characteristics in mixes for surface courses. .7 Sand equivalent: ASTM D2419. Min: 50. Magnesium Sulphate soundness: to ASTM .8 C88. Max% loss by mass: .1 Coarse aggregate surface course: 12%. .2 Coarse aggregate lower course: 12%. .3 Fine aggregate, surface course: 16%. .4 Fine aggregate, lower course: 16%. .9 Los Angeles degradation: Grading B, to ASTM C131. Max % loss by mass: Coarse aggregate, surface .1 course: 25%. .2 Coarse aggregate, lower course: 35%. .10 Absorption: to ASTM C127. Max % by mass: .1 Coarse aggregate, surface course: 1.75%. .2 Coarse aggregate, lower course: 2.00%. .11 Loss by washing: to ASTM C117. Max % passing 0.075 mm sieve: Coarse aggregate, surface .1 course: 1.5%. Coarse aggregate, lower course: .2 2.0%. .12 Lightweight particles: to ASTM C123. Max % by mass less than 1.95 relative density:

.1 Surface course: 1.5%. .2 Lower course: 3.0%. .13 Flat and elongated particles: to ASTM D4791, (with length to thickness ratio greater than 5): Max % by mass: Coarse aggregate, surface .1 course: 15%. .2 Coarse aggregate, lower course: 15% .14 Crushed fragments: at least 60 % of particles by mass within each of following sieve designation ranges, to have at least 1 freshly fractured face. Material to be divided into ranges, using methods of ASTM C136.

Passing		Retained on
25 mm	to	12.5 mm
12.5 mm	to	4.75 mm

.15 Regardless of compliance with specified physical requirements, fine aggregates may be accepted or rejected on basis of past field performance.

.3 Mineral filler:

.1 Finely ground particles of limestone, hydrated lime, Portland cement or other approved non-plastic mineral matter, thoroughly dry and free from lumps. .2 Add mineral filler when necessary to meet job mix aggregate gradation or as directed to improve mix properties. .3 Mineral filler to be dry and free flowing when added to aggregate.

- 2.2 EQUIPMENT
- .1 Pavers: mechanical grade controlled selfpowered pavers capable of spreading mix within specified tolerances, true to line, grade and crown indicated.
- .2 Rollers: sufficient number of type and weight to obtain specified density of

Page 8 2020-04-26

compacted mix.

.3 Vibratory rollers:

.1 Minimum drum diameter: 1200 mm. .2 Maximum amplitude of vibration (machine setting): 0.5 mm for lifts less than 50 mm thick.

.4 Haul trucks: sufficient number and of adequate size, speed and condition to ensure orderly and continuous operation and as follows:

.1 Boxes with tight metal bottoms. .2 Covers of sufficient size and weight to completely cover and protect asphalt mix when truck fully loaded.

.3 In cool weather or for long hauls, insulate entire contact area of each truck box.

.5 Hand tools:

.1 Lutes or rakes with covered teeth for spreading and finishing operations.
.2 Tamping irons having mass not less than 12 kg and bearing area not exceeding 310 cm² for compacting material along curbs, gutters and other structures inaccessible to roller. Mechanical compaction equipment, when approved by Departmental Representative, may be used instead of tamping irons.
.3 Straight edges, 4.5 m in length, to test finished surface.

- 2.3 MIX DESIGN .1 Mix design to be approved by Departmental Representative.
 - .2 Mix design to be developed by testing laboratory approved by Departmental Representative.
 - .3 Design of mix: by Marshall method to requirements below.
 - .1 Compaction blows on each face of test

Page 9 2020-04-26

specimens: 75.

.2 Mix physical requirements:

Property	Roads
Marshall Stability	5.5 surface course
at 60°C kN min	4.5 lower course
Flow Value mm	2-4
Air Voids in	3-5 surface course
Mixture, %	2-6 lower course
Voids in Mineral	15 surface course
Aggregate, % min	13 lower course
Index of Retained Stability % minimum	75

.3 Measure physical requirements as follows: .1 Marshall load and flow value: to AASHTO T245. Compute void properties on basis .2 of bulk specific gravity of aggregate to ASTM C127 and ASTM C128. Make allowance for volume of asphalt absorbed into pores of aggregate. Air voids: to ASTM D3203. .3 .4 Voids in mineral aggregates: to AI MS2, chapter 4. Index of Retained Stability: .5 measure in accordance with Section 32 12 10 - Marshall Immersion Test for Bitumen. Do not change job-mix without prior .4 approval of Departmental Representative. When change in material source proposed, new job-mix formula will be provided to be approved to be reviewed by Departmental Representative. .5 Return plant dust collected during processing to mix in quantities acceptable to Departmental Representative.

Page 10 2020-04-26

PART 3 - EXECUTION

3.1 PLANT AND MIXING REQUIREMENTS

.1 Batch and continuous mixing plants:

.1 TO ASTM D995.

.2 Feed aggregates from individual stockpiles through separate bins to cold elevator feeders. Do not load frozen materials into bins.

.3 Feed cold aggregates to plant in proportions to ensure continuous operations.

.4 Calibrate bin gate openings and conveyor speeds to ensure mix proportions are achieved.

.5 Before mixing, dry aggregates to moisture content not greater than 1% by mass or to lesser moisture content if required to meet mix design requirements.

.6 Immediately after drying, screen aggregates into hot storage bins in sizes to permit recombining into gradation meeting job-mix requirements.

.7 Store hot screened aggregates in manner to minimize segregation and temperature loss.

Heat asphalt cement and aggregate to .8 mixing temperature directed by Departmental Representative. Do not heat asphalt cement above maximum temperature indicated on temperature-viscosity chart. Make available current asphalt cement .9 viscosity data at plant. With information relative to viscosity of asphalt being used, Departmental Representative to review temperature of completed mix at plant and at paver after considering hauling and placing conditions. .10 Maintain temperature of materials within 5 degrees C of specified mix temperature during mixing.

.11 Mixing time:

.1 In batch plants, both dry and wet mixing times as directed by

.2

Electrical Installation Summerford, NL 723249

Departmental Representative. Continue wet mixing as long as necessary to obtain thoroughly blended mix but not less than 30s or more than 75s. .2 In continuous mixing plants, mixing time as directed by Departmental Representative but not less than 45s. Do not alter mixing time unless .3 directed by Departmental Representative. Dryer drum mixing plant: To ASTM D995. .1 Load aggregates from individual . 2 stockpiles to separate cold feed bins. Do not load frozen materials into bins. Feed aggregates to burner end of .3 dryer drum by means of multi-bin cold feed unit and blend to meet job-mix requirements by adjustments of variable speed feed belts and gates on each bin. .4 Meter total flow of aggregate by an electronic weigh belt system with indicator that can be monitored by plant operator and which is interlocked with asphalt pump so that proportions of aggregate and asphalt entering mixer remain constant. Provide for easy calibration of .5 weighing systems for aggregates without having material enter mixer. .6 Calibrate bin gate openings and conveyor speeds to ensure mix proportions are achieved. Calibrate weigh bridge on charging conveyor by weighing amount of aggregate passing over weigh bridge in set amount of time. Difference between this value and amount shown by plant computer system to differ by not more than plus or minus 2%.

.7 Make provision for conveniently sampling full flow of materials from cold feed.

Page 12 2020-04-26

.8 Provide screens or other suitable devices to reject oversize particles or lumps of aggregate from cold feed prior to entering drum.

.9 Provide system interlock stop on feed components if either asphalt or aggregate from bin stops flowing.

.10 Accomplish heating and mixing of asphalt mix in approved parallel flow dryer-mixer in which aggregate enters drum at burner end and travels parallel to flame and exhaust gas stream. Control heating to prevent fracture of aggregate or excessive oxidation of asphalt. Equip system with automatic burner controls and provide for continuous temperature sensing of asphalt mixture at discharge, with printing recorder that can be monitored by plant operator. Submit printed record of mix temperatures at end of each day. .11 Mixing period and temperature to produce uniform mixture in which particles are thoroughly coated, and moisture content of material as it leaves mixer to be less than 2%.

- .3 Temporary storage of hot mix:
 .1 Provide mix storage of sufficient capacity to permit continuous operation and designed to prevent segregation.
 .2 Do not store asphalt mix in storage bins in excess of 3 hours.
 - Mixing tolerances: .1 Permissible variation in aggregate gradation from job mix (percent of total mass).

.4

4.75 mm sieve and larger	5.0
2.00 mm sieve	4.0
0.425 mm sieve	3.0
0.180 mm sieve	2.0
0.075 mm sieve	1.0

Electrical Installati Summerford, NL 723249	.on	Page 13 2020-04-26
		.2 Permissible variation of asphalt cement from job mix: 0.25%. .3 Permissible variation of mix temperature at discharge from plant: 5 degrees C.
3.2 PREPARATION	.1	Remove existing asphalt and/or concrete slab on grade as noted on the drawings or as otherwise directed by Departmental Representative.
3.3 TRANSPORTATION OF MIX	.1	Transport mix to job site in vehicles cleaned of foreign material.
	. 2	Paint or spray truck beds with limewater, soap or detergent solution, or non petroleum based commercial product, at least daily or as required. Elevate truck bed and thoroughly drain. No excess solution to remain in truck bed.
	.3	Schedule delivery of material for placing in daylight, unless Departmental Representative approves artificial light.
	.4	Deposit mix from surge or storage silo to trucks in multiple drops to reduce segregation. Do not dribble mix into trucks.
	.5	Deliver material to paver at uniform rate and in an amount within capacity of paving and compacting equipment.
	.6	Deliver loads continuously in covered vehicles and immediately spread and compact. Deliver and place mixes at temperature within range as directed by Departmental Representative, but not less than 135 degrees C.
3.4 PLACING	.1	Obtain Departmental Representative's approval of subgrade material prior to

placing asphalt.

Electrical Installation	
Summerford, NL	Page 14
723249	2020-04-26

- .2 Apply asphalt bituminous tack coat as directed by Departmental Representative, prior to asphalt placement.
- .3 Place asphalt concrete to thicknesses, grades and lines as indicated. Bevel all perimeter edges of asphalt as directed by the Departmental Representative.
- .4 Placing conditions:

.1 Place asphalt mixtures only when air temperature is above 5 degrees C.
.2 When temperature of surface on which material is to be placed falls below 10 degrees C, provide extra rollers as necessary to obtain required compaction before cooling.

.3 Do not place hot-mix asphalt when pools of standing water exist on surface to be paved, during rain, or when surface is damp.

- .5 Place asphalt concrete in compacted lifts of thickness as indicated.
 .1 Lower course in 1 layer of 40 mm.
 .2 Surface course in 1 layer of maximum 40 mm.
- .6 Where possible do tapering and leveling where required in lower lifts. Overlap joints by not less than 300 mm.
- .7 Spread and strike off mixture with self propelled mechanical finisher. .1 Construct longitudinal joints and edges true to line markings. Departmental Representative to establish lines for paver to follow parallel to centerline of proposed pavement. Position and operate paver to follow established line closely. .2 When using pavers in echelon, have first paver follow marks or lines, and second paver follow edge of material placed by first paver. Work pavers as

Page 15 2020-04-26

close together as possible and in no case permit them to be more than 30 m apart. Maintain constant head of mix in .3 auger chamber of paver during placing. .4 If segregation occurs, immediately suspend spreading operation until cause is determined and corrected. Correct irregularities in alignment .5 left by paver by trimming directly behind machine. Correct irregularities in surface of .6 pavement course directly behind paver. Remove by shovel or lute excess material forming high spots. Fill and smooth indented areas with hot mix. Do not broadcast material over such areas. Do not throw surplus material on .7 freshly screeded surfaces. When hand spreading is used: .8 Distribute material uniformly. Do not .1 broadcast material. .2 During spreading operation, thoroughly loosen and uniformly distribute material by lutes or covered rakes. Reject material that has formed into lumps and does not break down readily. After placing and before rolling, . 3 check surface with templates and straightedges and correct irregularities. .4 Provide heating equipment to keep hand tools free from asphalt. Control temperature to avoid burning material. Do

3.5 COMPACTING

.1 Do not change rolling pattern unless mix changes or lift thickness changes. Change rolling pattern only as directed by Departmental Representative.

temperature of mix being placed.

not use tools at higher temperature than

.2 Roll asphalt continuously to density not less than 98% of blow Marshall density to AASHTO T245

Page 16 2020-04-26

.3 General:

.1 Provide at least two rollers and as many additional rollers as necessary to achieve specified pavement density. When more than two rollers are required, one roller must be pneumatic tired type. .2 Start rolling operations as soon as placed mix can bear weight of roller without excess displacement of material or cracking of surface.

Operate roller slowly initially to .3 avoid displacement of material. Do not exceed 5 km/h for breakdown and intermediate rolling for static steelwheeled and pneumatic tired rollers. Do not exceed 9 km/h for finish rolling. .4 For lifts 50 mm thick and greater, adjust speed and vibration frequency of vibratory rollers to produce minimum of 25 impacts per metre of travel. For lifts less than 50 mm thick, impact spacing not to exceed compacted lift thickness. Overlap successive passes of roller .5 by minimum of 200 mm and vary pass lengths.

.6 Keep wheels of roller slightly moistened with water to prevent pick-up of material but do not over-water.

.7 Do not stop vibratory rollers on pavement that is being compacted with vibratory mechanism operating.

.8 Do not permit heavy equipment or rollers to stand on finished surface before it has been compacted and has thoroughly cooled.

.9 After traverse and longitudinal joints and outside edge have been compacted, start rolling longitudinally at low side and progress to high side. Ensure that all points across width of pavement receive essentially equal numbers of passes of compactors.

.10 When paving in echelon, leave

unrolled 50 to 75 mm of edge which second paver is following and roll when joint between lanes is rolled. .11 Where rolling causes displacement of material, loosen affected areas at once with lutes or shovels and restore to original grade of loose material before re-rolling.

.4 Breakdown rolling:

.1 Begin breakdown rolling with static steel wheeled roller vibratory roller immediately following rolling of transverse and longitudinal joint and edges.

.2 Operate rollers as close to paver as necessary to obtain adequate density without causing undue displacement. .3 Operate breakdown roller with drive roll or wheel nearest finishing machine. When working on steep slopes or superelevated sections use operation approved by Departmental Representative. .4 Use only experienced roller operators.

.5 Intermediate rolling:

.1 Use pneumatic-tired, steel wheel or vibratory rollers and follow breakdown rolling as closely as possible and while paving mix temperature allows maximum density from this operation. .2 Rolling to be continuous after initial rolling until mix placed has been thoroughly compacted.

.6 Finish rolling:

.1 Accomplish finish rolling with twoaxle or three-axle tandem steel wheeled rollers while material is still warm enough for removal of roller marks. If necessary to obtain desired surface finish, use pneumatic-tired rollers as directed by Departmental Representative.

ummerford, NL 23249		Page 18 2020-04-26
		.2 Conduct rolling operations in close sequence.
3.6 JOINTS	1	General: .1 Remove surplus material from surface of previously laid strip. Do not deposit on surface of freshly laid strip. .2 Paint contact surfaces of existing structures such as Portland cement concrete deck, manholes, curbs or gutters with bituminous material prior to placing adjacent pavement.
	.2	<pre>Transverse joints: .1 Offset transverse joint in succeeding lifts by at least 600 mm. .2 Cut back to full depth vertical face and tack face with thin coat of hot asphalt prior to continuing paving. .3 Compact transverse joints to provide smooth riding surface. Use methods to prevent rounding of compacted surface at joints.</pre>
	.3	<pre>Longitudinal joints: .1 Offset longitudinal joints in succeeding lifts by at least 150 mm. .2 Cold joint is defined as joint where asphalt mix is placed, compacted and left to cool below 100 degrees C prior to paving of adjacent lane. .1 If cold joint can not be avoided, cut back by saw cutting previously laid lane, by at least 150 mm, to full depth vertical face, and tack face with thin coat of hot asphalt of adjacent lane. .3 Overlap previously laid strip with spreader by 25 to 50 mm. .4 Before rolling, carefully remove and discard coarse aggregate in material overlapping joint with lute or rake. .5 Roll longitudinal joints directly behind paving operation.</pre>
