2.3 Former Public Servant

Care should be taken by Bidders to explain each question in sufficient detail in order to enable Canada to provide an accurate answer. Technical enquiries that are of a proprietary nature must be clearly marked "proprietary" at each relevant item. Items identified as "proprietary" will be treated as such except where Canada determines that the enquiry is not of a proprietary nature. Canada may edit the question(s) or may request that the Bidder do so, so that the proprietary nature of the question(s) is eliminated, and the enquiry can be answered to all Bidders. Enquiries not submitted in a form that can be distributed to all Bidders may not be answered by Canada.

2.5 Applicable Laws

Any resulting contract must be interpreted and governed, and the relations between the parties determined, by the laws in force in **Prince Edward Island**.

Bidders may, at their discretion, substitute the applicable laws of a Canadian province or territory of their choice without affecting the validity of their bid, by deleting the name of the Canadian province or territory specified and inserting the name of the Canadian province or territory of their choice. If no change is made, it acknowledges that the applicable laws specified are acceptable to the Bidders.

2.6 Bid Challenge and Recourse Mechanisms

- (a) Several mechanisms are available to potential suppliers to challenge aspects of the procurement process up to and including contract award.
- (b) Canada encourages suppliers to first bring their concerns to the attention of the Contracting Authority. Canada's [Buy and Sell](#) website, under the heading "[Bid Challenge and Recourse Mechanisms](#)" contains information on potential complaint bodies such as:
 - Office of the Procurement Ombudsman (OPO)
 - Canadian International Trade Tribunal (CITT)
- (c) Suppliers should note that there are **strict deadlines** for filing complaints, and the time periods vary depending on the complaint body in question. Suppliers should therefore act quickly when they want to challenge any aspect of the procurement process.

PASSIVE SOLAR DESIGN CONCEPTS UTILIZED FOR THE PROJECT

BUILDING ORIENTATION AND SITING.
The building orientation is 14° from the horizontal to optimize the angle of the south wall against the direction of the sun throughout the year.

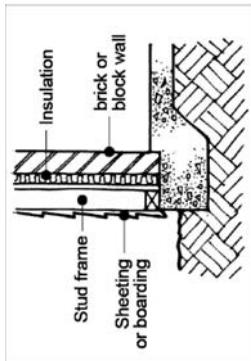

The building is located at the northern end of the site to prevent the trees from casting shadows on the building.

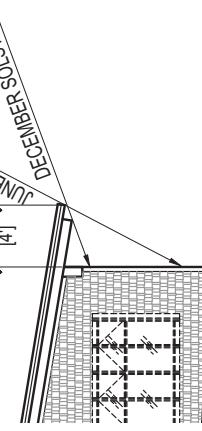

THERMAL MASS.
Use materials that has high thermal mass such as concrete and bricks to store heat while it's warm and release heat when it's cool.

THERMAL MASS - WALLS:
Use reverse brick veneer to provide thermal mass inside the building.

THERMAL MASS - FLOOR:
Use porcelain tiles, concrete topping and insulation in the cavity to preserve the thermal energy and prevent leakage into the basement.
Refer to NBCC 2015 for assembly F18.

Low SHGC glazing will be used on the West and East windows to prevent overheating in the summer.

Glazing on the south windows will have high Solar Heat Gain Coefficient (SHGC) in order to let more solar radiation in during the cool months while being under the shade of the long eaves during summer.

F18⁽¹⁾	<ul style="list-style-type: none"> • 38 mm concrete topping (at least 70 kg/m²) • subfloor of 15.5 mm plywood, OSB or waferboard, or 17 mm tongue and groove lumber • on wood joists or wood I-joists spaced not more than 600 mm o.c. • with or without absorptive material in cavity • steel furring channels spaced 100 mm or 600 mm o.c. • 1 layer of gypsum board on ceiling side

PASSIVE SOLAR DESIGN CONCEPTS UTILIZED FOR THE PROJECT

VERTICAL SHADING:
Use vertical shading on the West and East windows to prevent overheating during summer.

SOLARWALL®:
Use Solarwall® cladding on the south wall to minimize the heating load during the cooler months.

Solarwall® is made of perforated metal that is installed similar to a rainscreen. The HVAC or HRV takes hot fresh air from inside the cladding void and uses it to supply the building.
