Amendment 003 is issued to respond to questions and to attach pictures.

Q1: Does the Air conditioning unit have to be within the 8'x20' footprint of the container? Will you consider an exterior wall mounted unit?

A1: [See attached picture for clarification.](#)

Q2: The electrical transformer and electrical panel are quite big and with all the equipment inside the workshop container I'm not sure where this will be located? Do you have more accurate sizes of the equipment or will this be some details we will design after the job has been awarded?

A2: [We requested the heating and cooling units be built into the end of the unit, the intent of this is to have the steel doors used as access to services or utility section. For example, the factory doors could be louvered to allow airflow required for the Bard heating/cooling unit, the electrical panel and the transformer could also be installed in this area to keep it out of the work area.](#)

Q3: There seems to be a lot of saw dust with the workshop container. Should the electrical equipment be dust/ explosion proof?

A3: [As shown in the picture, this is the preferred way we would like the services for the container set up. If things are set up this way there should be no need for anything to be dust or explosion proof and it keeps everything inside the foot print of the container. Attached is a second picture that shows this set up with the doors closed.](#)

ALL OTHER TERMS AND CONDITIONS REMAIN THE SAME
