AMENDMENT 002

This amendment aims to publish questions and answers.

Q1: I am asking if the requirement ISO 9001 can be lifted or made optional for the sake of competition.

A1: The ISO 9001 certification is mandatory for this purchasing process. The ISO 9001 certification will ensure that the tooling dedicated to the composite stamping process is manufactured according to a rigorous process focusing on quality, reproducibility and continuous improvement in order to meet NRC's stringent requirements.

Q2: It is possible to change the contractor to subcontractor for previous experiences in the mandatory technical criteria?

A2: NRC is requesting proofs of previous experience in its technical criteria. This is to make sure NRC is directly dealing with a contractor that has previous experience with the fabrication of compression tools and to make sure it is dealing with a contractor that understands the challenges related to the fabrication of such tools. Therefore, proofs of previous experience must come from the contractor itself and not from a subcontractor.

Q3: It is possible to have the 3D files? The CAD file is required to determine the type of the machine (3 axis, 4 axis, 5 axis or ...) used for manufacturing and it significantly affects the pricing.

A3: For the sake of equity, all companies interested in participating to this purchasing process are requested to provide a quotation based on the same information, i.e. 2D drawings. Due to the complex shape of the tool (see Figure 2 and 2D drawing), it should, however, be assumed that equipment with high degree of freedom is necessary to manufacture requested tooling.

All other terms and conditions remain unchanged.
