---

**This amendment has been raised to answer the following questions:**

**Q1:** What type of imagery from the Worldview-3 satellite is available? It is typically possible to request panchromatic, multispectral and/or pansharpened. If the pansharpened version of the data is available, is it possible to have more specifications on which algorithm and band combination were used to process the images?

**A1:** Panchromatic images will be provided as well as sharpened images. The sharpening algorithm was only conducted on the 40cm images; this was conducted by Maxar and is proprietary.

**Q2:** How many satellite images will be provided? What is the resolution of the satellite images?

**A2:** We cannot confirm how many images as this will depend on the quote for reading as we have to stay within a defined budget, and images will be prioritized as needed to remain below 20,000km<sup>2</sup>. The imagery is a mix of 30cm and 40cm resolution.

**Q3:** Any information that could be shared in regard to the data (i.e. satellite information, spatial/spectral resolution of images, size of files)

**A3:** WorldView 3 satellite. The imagery is a mix of 30cm and 40cm resolution.

**All other terms and conditions remain the same.**
