Q&A 3

Q1: Based on the response of the Q&A:

Q1. This means the Headrest would be at around 35" high since it's at least 7" above the back? No one would be able to rest their head on the headrest or properly use the headrest in an ergonomic fashion.

This is written on the chair builder form in bold, that the headrest is recommended on a Standard back height not a high back.

A1: With 3 way adjustability, the headrest would be able to be positioned below the top of the backrest which would meet user requirements.
