

QE5: I am working on a bid submittal for the automate identification RFP and I wanted to clarify the point " quantity of two (2) AIT Management Software" Is this only two users that would be requiring access to the platform? If this is incorrect can you please let me know how many users would need to be accessing this software so I can account for that in my estimate.

AE5: The intent is to have one copy for each site, hence the quantity of two (2) software. Multiple users (10 or more) may need access at any time.

QE6: I had one more clarification question. In the below section for optional requirements it is listed in word for quantities but the number next to it to do not match. What should I be putting for the RFP response for instance is states two AIT management Software but then has a (4) so is it 2 users or 4 users.

AE6: DND was not able to find the described discrepancy. In any case, the optional requirement is for up to four (4) AIT Management Software. Like the previous questions, the intent is to have the software available to up to four additional sites with multiple users per site.
