Q&A 4

Q1: Large Occupant - The request for all 330 chairs to be for people between 275lbs to 400lbs. This chair will not be the best solution for someone less than 275lbs as the width will be too big. Do you want to split the number of chairs for Large Capacity and Standard Capacity to accommodate more people?

A1: The specified chairs must meet at least a 300lb weight capacity

Q2: Seat Depth - Available in Fixed at Shallow, Medium and Deep instead of available in Adjustable. Would an Adjustable Seat depth that covers all those sizes be acceptable as well?

A2: No, we require all 3 seat pan sizes each with adjustable seat depth

Q3: Backrest has been requested in Upholstered (not mesh) but then it says with air breathability. Please provide technical specifications for "Air Breathability Upholstery", as this is a requirement outside the SA Specifications.

A3: The chair back needs to be manufactured in away which allows the flow of air through it .
