AMENDMENT 002

This amendment is required to questions and answers.

- Q1. What is the number of pallets per hour?
- A1. More than 20 pallets per hour.
- Q2. What do you mean by Movable Friction Welding Unit?
- A2. That the device is able to make the junction regardless of the height of the item to be strapped.
- Q3. What do you mean by mobile lance for strapping palletized materials? I imagine you want some pallet void feeder so that the strap is applied in the pallets?
- A3. Yes.
- Q4. Do you have different strap positioning patterns on your pallets depending on the products on the pallets?
- A4. The positioning may vary.
- Q5. Can you tell me what strap width you want to use and how much tension you want to apply to it? If not, can you give me the specifications of your pallets (weight, items and others)?
- A5. The weight and dimensions vary as well as the nature of the material. The width of the strap we want to use must be between ½ inch to ¾ inch.
- Q6. What is maximum weight of your pallets and the pallets that will be used.
- A6. 1500 LBS.

Q7. When you say "Pressure of 3 imperial tons (with an acceptable quarter-ton variation)", are you talking about a compression system? If so, do all of your products need to be compressed? Is the surface on the top flat?

A7. Yes, we do want a compression system that would ideally allow a pressure adjustment since the material varies a lot and not all material can be compressed in the same way. We want there to be tension in every strap. The surface of the pallets is generally uneven.

Q8. How do you want to protect the area around the equipment? Using a curtain, fencing with doors?

A8. Wire mesh with doors.

Q9. -How would the pallets be fed and unloaded?

A9. Currently the system would be independent but will eventually be attached to a new system of conveyors. For the moment the system would be fed at one end and the pallets once strapped would be collected at the other end.

All other terms and conditions remain unchanged.
