This amendment 002 is raised for the following:

Question:

Question relating to the LCD Incident Monitors: It would seem that there was some conversation with Genetec on the interface to these LCD monitors. Is there a specific monitor that is to be used for this?

Answer:

Hearing Room Private Side Corridor Displays:

Where applicable, each designated location shall be comprised of a 24" LED wall mount monitor and video decoder. A smaller monitor can be used where mounting space is limited or where there is a small number of simultaneous streams required.

The hearing room private side corridor displays shall be located adjacent to doors separating public spaces and private hearing room corridors. The video decoder shall be programmed to display camera feeds of cameras viewing the proximate public side of the door.

The video decoder shall meet the minimum technical specifications:

- Displaying up to 16 video sources in Multiview (the video sources shall be programmed to display adjacent public feeds of views through HDMI output)
- Video streams shall be HDTV 1080p at up to 30 fps using H.264
- VESA bracket shall be used to install the video decoder to the back of the LED wall monitor.

The following figure illustrates the typical Corridor Video Display for the Private Side of the Hearing Room Corridors:
