**ADDENDUM NO. 5**

Subject: **Request for Proposal (RFP) - FP802-210006**

Title: **Carbon footprint analysis of five salmonid aquaculture technologies**

Dear Sir/Madam:

Further to the above-mentioned Invitation to Tender, this **Addendum no.5** is to advise potential bidders of the following question and answer:

**Question 8 :**

“Phase 1 states that ISO 14067 should be the basis for the CFA. The standard states that all process steps from feed to harvest-ready live-weight salmonids will be considered with regards to CO2 emissions should be included. The following phases do however focus on the five technology systems. Could DFO please confirm whether the boundaries for the studies are limited to the concrete systems or if production of feed should be included as well?”

**Answer 8 :**

The ISO 14067 standard was only provided as an example of an ISO standard that could be used to estimate the carbon footprint of the five salmonid aquaculture production systems. The scope of the carbon footprint analysis will be developed in coordination with the DFO Project Authority, however the primary focus of the analysis should be on the technologies themselves. While the analysis should consider feed, it should not be the primary focus of investigation.

All other terms and conditions remain unchanged.

Yours truly,

**Stéphane Julien**
