#### **APPENDIX A TO ANNEX A**

#### PRECIPITATION MEASUREMENTS - DAILY

#### 1. Precipitation Sample Collection Procedure:

- a) The Contractor must walk from the designated parking area to the CAPMoN Site, which is between 50 and 100 meters.
- b) Sampling from the daily collector must be done on a daily basis, and the procedures must be followed regardless of whether precipitation has occurred during the past 24 hours or not. The Sample History Form must be completed every day. Prior to making a daily sample change, a clean plastic bag must be placed in the spare collector bucket in the sample handling but using the procedures outlined in the CAPMoN SOP's.
- c) The site must be visited daily between 0700 and 0900 hours Local Standard Time (all functions and records remain on LST all year long). Upon arrival at the CAPMoN site, even if precipitation is presently occurring, the following procedure must be followed:
  - . Check the precipitation collector for normal functioning.
  - ii. Remove sample bucket containing the past 24-hour sample from the collector.
  - iii. Remove bucket lid from new sample bucket and place this on the sample bucket containing the past 24-hour sample.
  - iv. Install the new sample bucket onto the precipitation collector.
  - v. Measure the amount of precipitation (rain, snow, or mixed) in the appropriate precipitation gauge and record that amount.
- d) Upon returning to the storage building the following procedures must be followed to prepare the samples for storage and later shipment:
  - Remove the bucket lid from the sample bucket and discard the used lid bag.
  - ii. Use clean disposable gloves, remove the sample bag from the sample bucket while avoiding unfolding the top of the sample bag.
  - iii. Place the sample bag, whether dry or containing precipitation in the heat sealer.
  - iv. Remove all the air from the bag and seal them close to the top of the sample. Large samples (500 grams or more) shall be partitioned as per CAPMoN SOP's to prevent breakage and loss during shipment.
  - v. Affix correct numbered label to the outside of the bag.
  - vi. Check the weighing scale with the reference weight and record indicated weight on the Sample History Form.
  - vii. Place the sealed sample bag on the scale and record its weight on the Sample History Form.
  - viii. Place the sample bag, whether dry or containing precipitation into a plastic container and store in the refrigerator.
  - ix. Complete all required entries on the Sample History Form using appropriate codes, and using one line for each day.

## 2. CAPMoN Precipitation Collector Maintenance

- a) The Contractor must perform routine maintenance to ensure that the CAPMoN collector is functioning properly. The CAPMoN collector must be kept clean, and (in winter) must be kept free of ice and snow. On a daily basis the Contractor must ensure that:
  - i. Sensor grids are checked, cleaned with water as required, or replaced as required.
  - ii. Snow and ice is removed to prevent a buildup that would obstruct the proper operation of the collector.
  - iii. The underside of the lid cover is lined with a clean gasket; the contractor will check daily for damage, condensation and dirt, and will replace as necessary. The lid cover gasket must be cleaned every Tuesday with Kimwipes. Deionized water is used only when temperatures are above freezing.

- iv. The lid movement is checked daily for proper operation of the electric motor drive, smooth motion and proper start/stop switching.
- v. The Contractor must perform other maintenance or repair as directed by the Technical Authority.
- b) If the CAPMoN collector or associated equipment is found to be operating abnormally, or ceases to operate completely, the Contractor must contact the Technical Authority for further advice or action.
- c) Equipment failures or supply shortages must be reported immediately to the Technical Authority.
- d) Every Tuesday the samples must be placed in the sample shipping boxes provided and sent that day, via courier or post, to the CAPMoN Laboratory using the following procedures:
  - i. Pack the plastic containers containing the sample bags into the shipping boxes.
  - ii. Pack a number of frozen ice packs in the side of each shipping box.
  - iii. Pack two copies of the Sample History Form in a zip-lock bag and place on top of the containers.
  - iv. Insert a foam-insulating lid into the box and tape the box shut.
  - v. Complete a Courier Bill of Lading and take, or arrange for pick up, for shipment to:

CAPMoN Precipitation Samples Environment and Climate Change Canada 4905 Dufferin Street Toronto, Ontario M3H 5T4

The Contractor will be supplied with preprinted manifests and must ensure the samples are delivered to or picked up by the designated courier. Sample containers will be sent to the Contractor by the most economical means and may need to be picked up at the nearest Canada Post office.

#### **Air Sampling Collection Procedure**

- 1. Daily Contractor System Checks: Arrival between 0800-0900 Hours. On arrival at the sampling site the Contractor must:
  - i. Inspect the sample tower and mast, making sure that everything is intact;
  - ii. Visually check the sample head to determine which filter pack is being sampled as shown by the position indicator. If the indicator is not on, check to see if the source can be tracked (no power to the head, burnt out indicator, etc.).
  - iii. Check the sample line to ensure that there are no breaks or kinks in the line, or any other factors that may adversely affect the sample flow
  - iv. Observe the surrounding area to see if there are any conditions that may affect the sampling program (smoke from fires, construction nearby, vehicle activity, noticeable odour, etc.). These should be noted in the field notebook and on the sample history form.
- b) Weekly Contractor System Checks: Arrival post 08:00 LST, on arrival at the sampling site the Contractor must:
  - i. Complete daily contractor system checks.
  - ii. The sample pump is turned off and sets of filter packs are changed on a weekly basis post 08:00 LST.
  - iii. The sampling port on the sequential sampler is advanced using the data logger.
  - iv. All SHF are completed.
  - v. All filter packs are labeled, correctly sealed and placed in the shipping container for shipment.

vi. Complete a Courier Bill of Lading and take, or arrange for pick up, for shipment to:

CAPMoN Air Filter Samples Environment and Climate Change Canada 4905 Dufferin Street Toronto, ON. M3H 5T4

The Contractor will be supplied with preprinted manifests and must ensure the samples are delivered to or picked up by the designated courier. Sample containers will be sent to the Contractor by the most economical means and may need to be picked up at the nearest Canada Post office.

## c) Quarterly Contractor Duties

- i. Four times a year, the contractor will be responsible for changing the Compact Flash memory card in the chart recorder. At the end of each quarter the contractor will be sent a Compact Flash memory card in the mail.
- ii. On the first air filter change day in January, April, July and October the contractor will remove the compact flash memory card.
- iii. Record on the Air Sample History Form (SHF) the date and time the card was removed using the time displayed on the data logger.
- iv. Insert the new compact flash memory card.
- v. Send the old memory card inside the air filter box to the CAPMoN laboratory.
