AMENDMENT 002

This amendment is made in order to modify the Annex A (Requirement) of the Request for proposals and to publish a Question & Answer.

DELETE

ANNEX "A" - REQUIREMENT

Part 2 - Products

2.2 GENERAL FEATURES

- .14 Controls: Desk products offering *continuous height adjustment* capability shall be operable from the usual working position and shall not require the use of any unsupplied tools. Controls used to effect continuous adjustments shall have adequate clearance to permit the user to make the adjustment. Hand-crank-adjustable surfaces shall not require more than 50 N (12 lbf.) to operate.

QUESTION & ANSWER

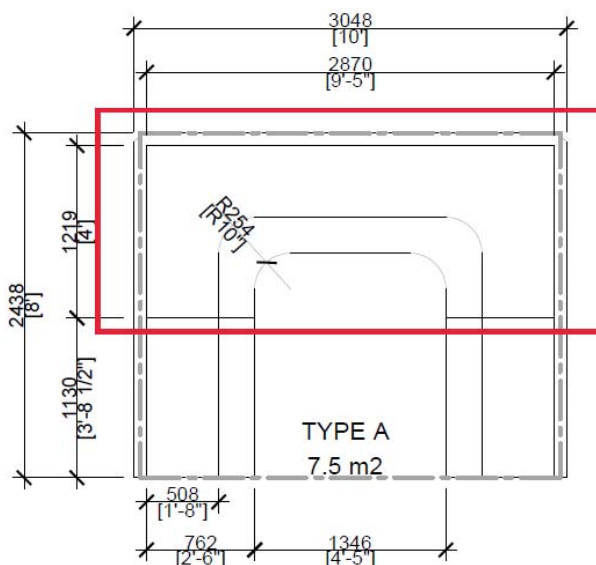

Question:

To our knowledge there are no hand crank systems that gives a stroke ranging from 24 to 50''H, therefore the height adjustability has to be performed by an electrical system, built from actuators, control box and a keypad. Can you confirm this is what is expected here, and if so, can you give an approximation of the weight capacity the actuators or the surface is expected to handle?

Answer:

The intention is that the work surface (like the shelves) can be manually installed at varying heights on the vertical structure and if needed, with height adjustable legs in the front for more support. The use of tools will be required.

At a minimum, the center surface will be adjustable, per the image below:
