Amendment 003 is raised to answer the question and incorporate the following below;

Question 1: There is a note on drawing C001 instructing the contractor to remove unsuitable material within the building footprint and replace with surge. Foundation note #1 on drawing S01 says to follow the recommendations of the geotechnical report. Section 5.2 of the geotechnical report (provided in Addendum #2) states that fill material must be excavated and the site brought back to subgrade by reusing select portions of the fill and importing structural fill to make up any shortfall of material.

Will the contractor be allowed to reuse select portions of the excavated fill?

Answer to Question 1: Yes. Portions of the fill can be utilized as structural fill. The fill would likely need to be processed to removed large particles (boulders) and encountered organics within the fill. There will be a geotech resource available on site during excavation and backfill activities. Please refer to TP 1 and BH1 on the Geotechnical Report

Insert in

Section 01 35 29.06 - 1.02.2.1 - there is reference to an Appendix A for Canadian Construction Association COVID-19 Standardized Protocols for All Canadian Construction Sites.
